## **XG 350**

**HYUNDAI**

A010A02A-AAT

## WARRANTIES FOR YOUR HYUNDAI VEHICLE

- o New Vehicle 60 Months/60,000 Miles Limited Warranty
- o New Vehicle 120 Months/100,000 Miles Limited Powertrain Warranty (Original owner only)
- o Anti-Perforation Limited Warranty
- o Emission Defect Warranty - Federal Vehicle
- o California Emission Control System Warranty (if applicable)
- o Emission Performance Warranty - Federal Vehicle
- o Replacement Parts and Accessories Limited Warranty

**NOTE:**

**Detailed warranty information is provided in your Hyundai Owner's Handbook.**

A020A01A-AAT

## RESPONSIBILITY FOR MAINTENANCE

The maintenance requirements for your new Hyundai are found in Section 5. As the owner, it is your responsibility to see that all maintenance operations specified by the manufacturer are carried out at the appropriate intervals. When the vehicle is used in severe driving conditions, more frequent maintenance is required for some operations. Maintenance requirements for severe operating conditions are also included in Section 5.

# HYUNDAI

## XG 350

### OWNER'S MANUAL

A030A01L-AAT

**Operation  
Maintenance  
Specifications**

HXGS001

All information in this Owner's Manual is current at the time of publication. However, Hyundai reserves the right to make changes at any time so that our policy of continual product improvement may be carried out.

This manual applies to all Hyundai XG 350 models and includes descriptions and explanations of optional as well as standard equipment. As a result, you may find material in this manual that does not apply to your specific vehicle.

A070A01A-AAT

### **CAUTION: MODIFICATIONS TO YOUR HYUNDAI**

Your Hyundai should not be modified in any way. Such modifications may adversely affect the performance, safety or durability of your Hyundai and may, in addition, violate conditions of the limited warranties covering the vehicle. Certain modifications may also be in violation of regulations established by the U.S. Department of Transportation and other federal or state agencies.

A080A01S-AAT

### **TWO-WAY RADIO OR CELLULAR TELEPHONE INSTALLATION**

Your vehicle is equipped with electronic fuel injection and other electronic components. It is possible for an improperly installed/adjusted two-way radio or cellular telephone to adversely affect electronic systems. For this reason, we recommend that you carefully follow the radio manufacturer's instructions or consult your Hyundai dealer for precautionary measures or special instructions if you choose to install one of these devices.

## FOREWORD

Thank you for choosing Hyundai. We are pleased to welcome you to the growing number of discriminating people who drive Hyundais. The advanced engineering and high-quality construction of each Hyundai we build is something of which we're very proud.

Your Owner's Manual will introduce you to the features and operation of your new Hyundai. It is suggested that you read it carefully because the information it contains can contribute greatly to the satisfaction you receive from your new car.

The manufacturer also recommends that all service and maintenance on your car be performed by an authorized Hyundai dealer. Hyundai dealers are prepared to provide high-quality service, maintenance and any other assistance that may be required.

## HYUNDAI MOTOR COMPANY

**Note** : Because future owners will also need the information included in this manual, if you sell this Hyundai, please leave the manual in the vehicle for their use. Thank you.

### **CAUTION:**

**Severe engine and transaxle damage may result from the use of poor quality fuels and lubricants that do not meet Hyundai specifications. You must always use high quality fuels and lubricants that meet the specifications listed on Page 9-4 in the Vehicle Specifications section of the Owner's Manual and which also appear in the Service Station Information on the back cover of the Owner's Manual.**

Copyright 2004 Hyundai Motor Company. All rights reserved. No part of this publication may be reproduced, stored in any retrieval system or transmitted in any form or by any means without the prior written permission of Hyundai Motor Company.

## SAFETY AND VEHICLE DAMAGE WARNING

This manual includes information titled as WARNING, CAUTION and NOTE.  
These titles indicate the following:

### **WARNING:**

This indicates that a condition may result in harm, serious injury or death to you or other persons if the warning is not heeded. Follow the advice provided with the warning.

### **CAUTION:**

This indicates that a condition may result in damage to your vehicle or its equipment if the caution is not heeded. Follow the advice provided with the caution.

### **NOTE:**

This indicates that interesting or helpful information is being provided.

## Guide to Hyundai Genuine Parts

### 1. What are Hyundai Genuine Parts?

Hyundai Genuine Parts are the same parts used by Hyundai Motor Company to manufacture vehicles. They are designed and tested for the optimum safety, performance, and reliability to our customers.

### 2. Why should you use genuine parts?

Hyundai Genuine Parts are engineered and built to meet rigid manufacturing requirements. Using imitation, counterfeit or used salvage parts is not covered under the Hyundai New Vehicle Limited Warranty or any other Hyundai warranty. In addition, any damage to or failure of Genuine Hyundai Parts caused by the installation or failure of

an imitation, counterfeit or used salvage part is not covered by any Hyundai Warranty.

### 3. How can you tell if you are purchasing Hyundai Genuine Parts?

Look for the Hyundai Genuine Parts Logo on the package (see below).

Hyundai Genuine Parts exported to the United States are packaged with labels written only in English.

Hyundai Genuine Parts are only sold through authorized Hyundai Dealerships.

To find the closest authorized dealer call

B010A03A-AAT

**Use Unleaded Gasoline**

**Unleaded gasoline with a Pump Octane Rating of 87 (Research Octane Number 91) or higher must be used in your Hyundai.**

If leaded gasoline is used, it will cause the catalytic converter to become ineffective and the emission control system to malfunction. This can also result in increased maintenance expense.

To avoid accidental use of leaded fuel, the larger nozzle used with leaded gasoline at service stations cannot be inserted into the fuel tank opening of your Hyundai.

**CAUTION:**

- o Do not "TOP-OFF" after the first nozzle shut off when refueling.
- o The fuel cap must be tightened at least 3 clicks, otherwise "CHECK" light may illuminate.

B010B01A-AAT

**What About Gasohol?**

Gasohol (a mixture of 90% unleaded gasoline and 10% ethanol or grain alcohol) may be used in your Hyundai. However, if your engine develops driveability problems, the use of 100% unleaded gasoline is recommended. Fuels with unspecified quantities of alcohol, or alcohols other than ethanol, should not be used.

B010C01A-AAT

**Use of MTBE**

Hyundai recommends that fuels containing MTBE (Methyl Tertiary Butyl Ether) over 15.0% vol. (Oxygen Content 2.7% weight) should not be used in your Hyundai. Fuel containing MTBE over 15.0% vol. (Oxygen Content 2.7% weight) may reduce vehicle performance and produce vapor lock or hard starting.

B010D01A-AAT

**Do Not Use Methanol**

Fuels containing methanol (wood alcohol) should not be used in your Hyundai. This type of fuel can reduce vehicle performance and damage components of the fuel system.

**CAUTION:**

**Your Hyundai's New Vehicle Limited Warranty may not cover damage to the fuel system and any performance problems that are caused by the use of fuels containing methanol or fuels containing MTBE (Methyl Tertiary Butyl Ether) over 15.0% vol. (Oxygen Content 2.7% weight.)**

## BREAKING IN YOUR NEW HYUNDAI

## KEY

B010E01A-AAT

**Gasolines for Cleaner Air**

To help contribute to cleaner air, Hyundai recommends that you use gasolines treated with detergent additives, which help prevent deposit formation in the engine. These gasolines will help the engine run cleaner and enhance performance of the Emission Control System.

B010F01A-AAT

**Operation in Foreign Countries**

If you are going to drive your Hyundai in another country, be sure to:

- o Observe all regulations regarding registration and insurance.
- o Determine that acceptable fuel is available.

B020A01S-AAT

**During the First 1,200 Miles (2,000 Km)**

No formal "break-in" procedure is required with your new Hyundai. However, you can contribute to the economical operation and durability of your Hyundai by observing the following recommendations during the first 1,200 miles (2,000 km).

- o Don't drive faster than 55 MPH (88 km/h).
- o While driving, keep your engine speed (rpm, or revolutions per minute) between 2,000 rpm and 4,000 rpm.
- o Use moderate acceleration. Don't start quickly or depress the accelerator pedal fully.
- o For the first 200 miles (300 km), try to avoid hard stops.
- o Don't lug the engine (in other words, don't drive so slowly in too high a gear that the engine "bucks"-shift to a lower gear).
- o Whether going fast or slow, vary your speed from time to time.
- o Don't let the engine idle longer than 3 minutes at one time.
- o Don't tow a trailer during the first 1,200 miles (2,000 km) of operation.

B030A01Y-AAT

**KEYS**

For greater convenience, your Hyundai has two master keys and a sub key. The master keys will open all locks on your vehicle. The sub key will only function in the ignition and the door locks.

Leaving your sub key with a parking attendant will ensure that your vehicle's trunk, trunk lid release, glovebox compartment and rear trunk access may not be unlocked in your absence.

**NOTE:**

**Before leaving your sub key with a parking attendant, make sure that the lock levers of the rear seat back lock and the trunk lid lock are switched to the "LOCK" position.**

B030B01A-AAT

**Record Your Key Number**

B030B01L

A code number is stamped on the number plate that came with the keys to your Hyundai. This key number plate should not be left with the keys but kept in a safe place, not in the vehicle. The key number should also be recorded in a place where it can be found in an emergency.

If you need additional keys, or if you should lose your keys, your authorized Hyundai dealer can make new keys if you can supply the key number.

**ILLUMINATED IGNITION SWITCH**

B030C01Y-AAT

B030C01L

Whenever a door is opened, the ignition switch will be illuminated for your convenience, provided the ignition switch is not in the "ON" position.

The light will go off approximately 10 seconds after closing the door or when the ignition switch is turned on.

**DOOR**

B040A01Y-AAT

**DOOR LOCKS****WARNING:**

- o Unlocked doors can be dangerous. Before you drive away (especially if there are children in the car), be sure that all the doors are securely closed and locked so that the doors cannot be opened from the inside. This helps ensure that the doors will not be opened accidentally. Also, when combined with the proper use of seat belts, locking the doors helps keep occupants from being ejected from the car in case of an accident.
- o Before opening the door, always look for and avoid oncoming traffic.
- o In case of accident, the door is unlocked automatically.

B040B01A-AAT

### Locking and unlocking front doors with a key

- o The door can be locked or unlocked with a key.
- o Lock the door by turning the key toward the front of the vehicle and unlock it by turning the key toward the rear.

B040C02Y-AAT

### Locking From the Outside

The doors can be locked without a key. To lock the doors, first push the inside lock switch to the "LOCK" position so that the red mark on the switch is not visible, then close the door. The door will not lock if the key is left in the ignition switch when the front doors close. This is normal.

#### NOTE:

- o When locking the door this way, be careful not to lock the door with the ignition key left in the vehicle.
- o To prevent against theft, always remove the ignition key, close all windows, and lock all doors and the trunk lid when leaving your vehicle unattended.

B040D02S-AAT

### Locking From the Inside

- o To lock the doors from the inside, simply close the door and push the lock switch to the "LOCK" position. When this is done, neither the outside nor the passenger's inside door handle can be used.
- o The driver's door can be opened by pulling the inside door handle even if the lock switch is depressed.

#### NOTE:

When the door is locked, the red mark on the switch is not visible.

B040E04A-AAT

**CHILD-PROTECTOR REAR DOOR LOCK**

B040E03L

Your Hyundai is equipped with a "child-protector" rear door lock assembly. When the lock mechanism is engaged, the rear door cannot be opened from the inside. Its use is recommended whenever there are small children in the rear seat.

To engage the child-protector feature so the door cannot be opened from the inside, move the child-protector lever to the "LOCK" position and close the door. Move the lever to the "UNLOCK" position when normal door operation is desired.

If you wish to be able to open the door from the outside, the outside door handle will function normally.

**CENTRAL DOOR LOCKS**

B040G02L-AAT

B040G02L-1

The central door locking switch is located on the driver's arm rest. It is operated by depressing either the front or rear of the door lock switch.

**NOTE:**

- o When pushing the front portion of the driver's door lock switch, all vehicle doors will lock.  
If any door is open when the switch is depressed, the door will remain locked when closed.
- o When pushing the rear portion of the switch, all vehicle doors will unlock.

**KEYLESS ENTRY SYSTEM**

B070F01L-AAT

**Locking doors**

1. Close all doors.
2. Push the "LOCK" button on the transmitter.
3. All doors will lock and the turn signal lights will blink once to indicate that the system is armed.

**Unlocking doors**

1. Push the "UNLOCK" button on the transmitter.
2. All doors will unlock and the turn signal lights will blink twice to indicate that the system is disarmed.

**Releasing the trunk lid**

Push the "TRUNK" button on the transmitter for longer than 1 second.

## THEFT-ALARM SYSTEM

B070A01S-AAT

### (If Installed)

This system is designed to provide protection from unauthorized entry into the car. This system is operated in three stages : the first is the "Armed" stage, the second is the "Alarm" stage, and the third is the "Disarmed" stage. If triggered, the system provides an audible alarm.

B070B03Y-AAT

### Armed Stage

Park the car and stop the engine. Arm the system as described below.

- 1) Remove the ignition key from the ignition switch.
- 2) Make sure that the engine hood and trunk lid are locked.
- 3) Lock the doors using the transmitter of the keyless entry system.

After completion of the steps above, the turn signal light will blink once to indicate that the system is armed.

### NOTE:

- 1) If any door, trunk lid or engine hood remains open, the system will not be armed.
- 2) If this happens, rearm the system as described above.

### CAUTION:

**Do not arm the system until all passengers have left the car. If the system is armed while a passenger(s) remains in the car, the alarm may be activated when the remaining passenger(s) leaves the car.**

B070C03L-GAT

### Alarm Stage

HXGS123

The alarm will be activated if any of the following occurs while the car is parked and the system is armed.

- 1) A front or rear door is opened without using the transmitter.
- 2) The trunk lid is opened without using the transmitter.
- 3) The engine hood is opened.

The turn signal lights will blink continuously and the siren will sound for 27 seconds. (EC only/ Except E.C: This happens 3 times). To turn off the system, unlock the door or trunk lid with the transmitter.

### CAUTION:

**Avoid trying to start the engine while the system is armed.**

B070D04L-AAT

### Disarmed Stage

HXG117

The system will be disarmed when the following step is taken:

The driver's or passenger's door is unlocked by depressing the "UNLOCK" button on the transmitter. After completion of the steps above, the turn signal lights will blink twice to indicate that the system is disarmed.

### CAUTION:

**Only the transmitter can disarm the armed stage. If the transmitter does not disarm the system, it is necessary to take the following steps;**

1. **Unlock the door with the key, which will cause the alarm to be activated.**
2. **Insert the key in the ignition key cylinder and turn the ignition key to "ON" position.**
3. **Wait for 30 seconds.**

**After completing the steps above, the system will be disarmed.**

B070E02HP-GAT

### Replacing the battery

When the transmitter's battery begins to get weak, it may take several pushes on the button to lock or unlock the doors, and the LED will not light. Replace the battery as soon as possible.

Battery type : CR2032

Replacement instructions:

1. Carefully separate the case with a blade screwdriver as shown in the illustration.

## POWER WINDOWS

- Remove the old battery from the case and note the polarity. Make sure the polarity of the new battery is the same (+side facing down), then insert it in the transmitter.

B060A03Y-AAT

The power windows operate when the ignition key is in the "ON" position. The main switches are located on the driver's armrest and control the front and rear windows on both sides of the vehicle. The windows may be opened by depressing the appropriate window switch and closed by pulling up the switch. To open the window on the driver's side, press the switch(1) halfway down. The window moves as long as the switch is operated. To fully open the driver's window automatically, press the switch fully down. In automatic operation, the window will fully open even if you let go of the switch. To stop at the desired opening, pull up and release the switch.

In order to prevent operation of the passenger front and rear windows, a window lock switch(2) is provided on the armrest of the driver's door. To disable the power windows, press the window lock switch. To return to normal operation, press the window lock switch a second time.

**NOTE:**

**The power windows can be operated for 30 seconds after the ignition key is turned to the "ACC" or "LOCK" positions, or removed from the ignition switch.**

**If the front doors are opened during this 30 second period, the power windows can no longer be operated without the ignition key turned to the "ON" position.**

## SEATS

B080A01A-AAT

## ADJUSTABLE FRONT SEATS

**! WARNING:**  
 Never attempt to adjust the seat while the vehicle is moving. This could result in loss of control or an accident which may cause death, serious injury, or property damage.

B080B01L-AAT

## Adjusting Seat Forward and Rearward

To move the seat toward the front or rear, pull the lock release lever upward. This will release the seat on its track so you can move it forward or rearward to the desired position. When you find the position you want, release the lever and slide the seat forward or rearward on its track until it locks into the desired position and cannot be moved further.

**! WARNING:**  
 To ensure the seat is locked securely, attempt to move the seat forward or rearward without using the control knob.

**WARNING:**

- (1) Be careful that someone's head, hands and body are not trapped by a closing window.
- (2) Never try to operate the main switch on the driver's door and the individual door window switch in opposing directions at the same time. If this is done, the window will stop and cannot be opened or closed.
- (3) Do not leave children alone in the car. Always remove the ignition key for their safety.

B080C02A-AAT

**Adjusting Seatback Angle**

HXG103

To recline the seatback, lean forward to take your weight off it, then pull up on the recliner control lever at the outside edge of the seat. Now lean back until the desired seatback angle is achieved. To lock the seatback into position, release the recliner control lever.

**WARNING:**

To minimize risk of severe injury in the event of a collision or a sudden stop, both the driver and passenger seatbacks should always be in an upright position while the vehicle is in motion. The protection provided by the seat belts and airbags in a frontal collision may be reduced significantly when the seatbacks are reclined. There is greater risk that the driver and passenger will slide under the seat belt which may result in serious injury if a crash occurs when the seatbacks are reclined. The seat belt and airbags cannot provide proper protection to an occupant if the seat back is reclined.

B080D01L-GAT

**Adjustable Headrests**

HXG200J

Headrests are designed to help reduce the risk of neck injuries.

To raise the headrest, pull it up. To lower it, push it down while pressing the lock knob. If equipped with a horizontally adjustable type of headrest, pull on the top.

### WARNING:

- For maximum effectiveness in case of an accident the headrest should be adjusted so the top of the headrest is at the same height as the top of the occupant's ears. For this reason, the use of a cushion that holds the body away from the seatback should not be recommended.
- Do not operate vehicle with the headrests removed as injury to the occupants may occur in the event of an accident. Headrests may provide protection against neck injuries when properly adjusted.

B080E01L-AAT

### Lumbar Support Control

To adjust the lumbar support, turn the handle on the outboard or left side of the seat. To increase the amount of lumbar support, pull the lever forward. To decrease it, push the lever toward the rear.

1. Minimum support
2. Maximum support

B090C01Y-AAT

### Seat Cushion Height Adjustment (Driver's Seat Only)

Move the front portion of the control knob up or down to raise or lower the front part of the seat cushion. Move the rear portion of the control knob up or down to raise or lower the rear part of the seat cushion.

## POWER SEAT

B090A03L-AAT

### (If Installed)

The front seat can be adjusted appropriately by using the control knobs on the left side of the seat. Before driving, adjust the seat to the proper position so as to easily control the steering wheel, pedals and switches on the instrument panel.

**CAUTION:**  
Do not operate two knobs at the same time.

**WARNING:**

- o Never attempt to adjust the seat while the vehicle is moving. This could result in loss of control or an accident causing death, serious injury, or property damage.
- o Do not sit or lean unnecessarily close to the airbag.

B090B01L-AAT

### Adjusting Seat Forward and Rearward

HXG180

Pull the control knob forward or backward to move the seat forward or backward to the desired position. Release the knob and then the seat will remain at that position.

1. Seatback Reclining Control Knob
2. Seat Cushion Forward, Rearward and Height Adjusting Control Knob

B090C01Y-AAT

### Seat Cushion Height Adjustment

HXG182

Move the front portion of the control knob up or down to raise or lower the front part of the seat cushion. Move the rear portion of the control knob up or down to raise or lower the rear part of the seat cushion.

B090D01Y-AAT

### Adjusting Seatback Angle

HXG181

Rotate the upper portion of the control knob forward or backward to adjust the seatback to the desired position. Release the control knob and the seatback will remain in that position.

**!** **WARNING:**

To minimize the risk of personal injury in the event of a collision or a sudden stop, both the driver's and passenger's seatbacks should remain in an upright position while the car is in motion. The protection provided by the seat belts and airbags may be reduced significantly when the seatbacks are reclined. There is a greater risk that the seat occupants will slide under the seatbelt resulting in serious injury if a crash occurs when the seatbacks are reclined. The seat belt cannot provide full protection to an occupant if the seatback is reclined.

B090E05L-AAT

### I.M.S (Integrated Memory System) (If Installed)

HXG212

The Integrated Memory System controls are located on the driver's door. After adjusting the position of the driver's seat and outside rear-view mirrors, use the I.M.S to memorize them. Two different driving position profiles can be entered in the I.M.S. If you turn the ignition key to the "ON" position, the memorized position is adjusted automatically.

## To memorize driving position

1. Turn the ignition key "ON".
2. Adjust the driver's seat and outside rearview mirrors to the desired position.
3. Push the "M" button on the I.M.S until the signal beeps.
4. Within five seconds, push button "1" or "2" until the signal beeps twice. The beep sounds mean that the positions are memorized in the I.M.S.

### CAUTION:

In the following conditions, the I.M.S will not operate.

1. When the "1" or "2" button is not pushed within five seconds.
2. When the seat is being adjusted.
3. When the "STOP" button is pushed.
4. While the vehicle is moving.

## To activate the memorized position

When you push button "1" or "2", the driving position will be automatically adjusted to the position recorded for that button.

## "AUTO" button function

When the "AUTO" button is "ON", the system will move the driver's seat forward or rearward so you can comfortably enter and exit the vehicle.

- o It will move driver's seat rearward when the ignition key is pulled out.
- o It will move driver's seat forward when the ignition key is inserted.

### Note:

In order for the "AUTO" functions to work, the parking brake must be applied.

### CAUTION:

In the following conditions, the "AUTO" mode will not operate.

1. When AUTO button is in "OFF".
2. When the seat is being adjusted.
3. When the shift lever is positioned in other than "P" position.

## Reverse Parking Aid Function

When the "AUTO" button is "ON" and the vehicle is moving backward, the outside rearview mirror(s) will move downward to aid reverse parking safely. According to the position of the outside rearview mirror switch knob, the outside rearview mirror(s) will operate as follows.

- L : When the remote control outside rearview mirror switch knob is selected to the "L" position, both of the outside rearview mirrors will move downward.
- R : When the remote control outside rearview mirror switch knob is selected to the "R" position, only the passenger's outside rearview mirror will move downward.

**Neutral** : When the remote control outside rearview mirror switch knob is placed in the middle position, the outside rearview mirrors will not operate while the vehicle is moving backward.

### NOTE:

When the ignition key is in the "LOCK" position, the selector lever is moved to any position except "R" position, or the remote control outside rearview mirror switch knob is placed in the middle position, the outside rearview mirrors will automatically revert to original position.

## SEAT WARMER

B100A02Y-AAT  
(If Installed)

The seat warmer is provided to warm the front seats during cold weather. With the ignition key in the "ON" position, push either of the switches to warm the driver's seat or the passenger's seat.

During mild weather or under conditions where the operation of the seat warmer is not needed, keep the switches in the "OFF" position.

### WARNING:

It is recommended that the seat heater not be used when elderly people or people who are ill occupy the seat. Also, do not use the seat warmer if the occupant is sleeping.

## FOLDING REAR SEATBACKS

B110A01L-AAT

- o To unlock the seatback, depress the seatback locking button, then pull forward on the seatback panel.
- o When you return the seatback to its upright position, always be sure it has locked into position by pulling and pushing on the top of the seatback.

### WARNING:

The purpose of the folding rear seatbacks is to allow you to carry longer objects than could otherwise be accommodated. Never allow passengers to sit on top of the folded down seatback. While the car is moving as this is not a proper seating position and no seat belts are available for use. This could result in serious injury or death in case of an accident or sudden stop. Objects carried on the folded down seatback should not extend higher than the top of the front seats. This could allow cargo to slide forward and cause injury or damage during sudden stops.

**!**

B140A01S-AAT  
**REAR SEAT WARNING**

B140A03L

For the safety of all passengers, luggage or other cargo should not be piled higher than the top of the seatback. In addition, do not place objects on the rear shelf as they may move forward during braking or in an accident and strike vehicle passengers.

B120A01Y-AAT  
**REAR SEATBACK SAFETY LOCK  
(If Installed)**

If the rear seatback lock lever (located on the backside of the rear seatback) is in the "LOCK" position when the rear seatbacks are closed, it will not be possible to fold the rear seatback by using the release lock lever. In this instance, move the lock lever to the "FREE" position and fold the rear seatback. The rear seatback lock lever is designed to provide protection from unauthorized entry into the trunk.

B150A02A-AAT  
**SEAT BELT PRECAUTIONS**

**!** **WARNING:**

All occupants of the vehicle must wear their seat belts at all times. Note that this vehicle is equipped with a Supplemental Restraint (Airbag) System as discussed beginning on page 1-31. The seat belts must be used in conjunction with the supplemental airbag system. State laws require that some or all occupants of the vehicle use seat belts. The possibility of increased injury or severity of injury in an accident will be increased if this elementary safety precaution is not observed.

B150B04Y-AAT

**Infant or Small Child**

All 50 states have child restraint laws. You should be aware of the specific requirements in your state. Child and/or infant safety seats must be properly placed and installed in the rear seat. Information about the use of these restraints begins on page 1-24.

**WARNING:**

Every person in your vehicle needs to be properly restrained at all times, including infants and children. In a collision, an unrestrained child can become a "missile" inside the car. The force required to hold a child on your lap could be so great that you could not hold the child. Any child riding in the vehicle should always be in a proper restraint in the rear seat of the vehicle.

**NOTE:**

Small children are best protected from injury in an accident when properly restrained in the rear seat by a child restraint system that meets the requirements of the Federal Motor Vehicle Safety Standards. Before buying any child restraint system, make sure that it has a label certifying that it meets Federal Motor Vehicle Safety Stan-

**Standard 213. The restraint must be appropriate for your child's height and weight. Check the label on the child restraint for this information. See page 1-24.**

B150C02A-AAT

**Larger Children**

Children who are too large for child restraint systems should always occupy the rear seat and use the available lap/shoulder belts. The lap portion should be fastened snug on the hips and as low as possible. Check belt fit periodically. A child's squirming could put the belt out of position. Children are afforded the most safety in the event of an accident when they are restrained by a proper restraint system in the rear seat. If a larger child (over age 13) must be seated in the front seat, the child should be securely restrained by the available lap/shoulder belt and the seat should be placed in the rearmost position. Children under the age of 13 should be restrained securely in the rear seat. NEVER place a child under the age of 13 in the front seat. NEVER place a rear facing child seat in the front seat of a vehicle.

B150D01A-AAT

**Pregnant Women**

The use of a seat belt is recommended for pregnant women to lessen the chance of injury in an accident. When a seat belt is used, the lap belt portion should be placed as low and snugly as possible on the hips, not across the abdomen. For specific recommendations, consult a physician.

B150E01A-AAT

**Injured Person**

A seat belt should be used when an injured person is being transported. When this is necessary, you should consult a physician for recommendations.

B150F01A-AAT

**One Person Per Belt**

Two people (including children) should never attempt to use a single seat belt. This could increase the severity of injuries in case of an accident.

B150G01A-AAT

**Do Not Lie Down**

To reduce the chance of injuries in the event of an accident and to achieve maximum effectiveness of the restraint system, all passengers should be sitting up and the front seats should be in an upright position when the car is moving. A seat belt cannot provide proper protection if the person is lying down in the rear seat or if the front seat is in a reclined position.

**WARNING:**

Sitting in a reclined position or lying down when your vehicle is in motion can be dangerous. Even if you buckle up, your seat belts can't do their job when you're reclined. The shoulder belt can't do its job because it won't be against your body. Instead, it will be in front of you. In a crash you could go into it with great force, receiving serious neck or other injuries. The lap belt can't do its job either. In a crash the belt could go up over your abdomen. The belt forces would be applied there, not at your strong pelvic bones. This could cause serious internal injuries. For proper protection when the vehicle is in motion, have the seatback upright. Then sit back in the seat and wear your seat belt properly.

B160A01A-AAT

**CARE OF SEAT BELTS**

Seat belt systems should never be disassembled or modified. In addition, care should be taken to assure that seat belts and belt hardware are not damaged by seat hinges, doors or other abuse.

**WARNING:**

When you return the rear seatback to its upright position after the rear seatback was folded down, be careful not to damage the seat belt webbing or buckle. Be sure that the webbing or buckle does not get caught or pinched in the rear seat.

B160B01A-AAT

**Periodic Inspection**

It is recommended that all seat belts be inspected periodically for wear or damage of any kind. Parts of the system that are damaged should be replaced as soon as possible.

B160C01A-AAT

**Keep Belts Clean and Dry**

Seat belts should be kept clean and dry. If belts become dirty, they can be cleaned by using a mild soap solution and warm water. Bleach, dye, strong detergents or abrasives should not be used because they may damage and weaken the fabric.

B160D01A-AAT

**When to Replace Seat Belts**

Entire in-use seat belt assembly or assemblies should be replaced if the vehicle has been involved in an accident. This should be done even if no damage is visible. Additional questions concerning seat belt operation should be directed to your Hyundai Dealer.

B170A01L-GAT

## HEIGHT ADJUSTABLE FRONT SEAT SHOULDER BELT

You can adjust the height of the shoulder belt anchor to one of the 4 positions for maximum comfort and safety.

If the height of the adjusting seat belt is too near your neck, you will not be getting the most effective protection. The shoulder portion should be adjusted so that it lies across your chest and midway over your shoulder nearest the door and not your neck.

To adjust the height of the seat belt anchor, lower or raise the height adjuster into an appropriate position. To raise the height adjuster, pull it up. To lower it, push it down while pressing the height adjuster button.

Release the button to lock the anchor into position. Try sliding the height adjuster to make sure that it has locked into the position.

### WARNING:

- o The height adjuster must be in the locked position when the vehicle is moving.
- o The misadjustment of height of the shoulder belt could reduce the effectiveness of the seat belt in a crash.

B180A01L-AAT

## SEAT BELT-Driver's 3-Point System with Emergency Locking Retractor: To Fasten Your Belt

To fasten your seat belt, pull it out of the retractor and insert the metal tab into the buckle. There will be an audible "click" when the tab locks into the buckle.

The seat belt automatically adjusts to the proper length only after the lap belt portion is adjusted manually so that it fits snugly around your hips. If you lean forward in a slow, easy motion, the belt will extend and let you move around. If there is a sudden stop or impact, however, the belt will lock into position. It will also lock if you try to lean forward too quickly.

Check to make sure that the belt is properly locked and that the belt is not twisted.

**NOTE:**

**Seat belt reminder light comes and stays on until the seat belt is fastened when the ignition key is turned "ON" or "START". And, the warning chime will also sound for about 6 seconds.**

B190A01Y-AAT

**SEAT BELTS-Front Passenger and Rear Seat 3-Point System with Combination Locking Retractor:  
To Fasten Your Belt**

Combination retractor type seat belts are installed in the rear seat positions to help accommodate the installation of child restraint systems. Hyundai strongly recommends that children always be seated in the rear seat. NEVER place any infant restraint system in the front seat of the vehicle.

This type of seat belt combines the features of both an emergency locking retractor seat belt and an automatic locking retractor seat belt. To fasten your seat belt, pull it out of the retractor and insert the metal tab into the buckle. There will be an audible "click" when the tab locks into the buckle. When not securing a child restraint,

the seat belt operates in the same way as the driver's seat belt (Emergency Locking Retractor Type). It automatically adjusts to the proper length only after the lap belt portion of the seat belt is adjusted manually so that it fits snugly around your hips. When the seat belt is fully extended from the retractor to allow the installation of a child restraint system, the seat belt operation changes to allow the belt to retract, but not to extend. (Automatic Locking Retractor Type). See page 1-27.

**NOTE:**

**Although the combination retractor provides the same level of protection for seated passengers in either emergency or automatic locking modes, it is recommended that seated passengers use the emergency locking feature for improved convenience. The automatic locking function is intended to facilitate child restraint installation. To convert from the automatic locking feature to the emergency locking operation mode, allow the unbuckled seat belt to fully retract.**

**WARNING:**

- o For maximum restraint system protection, the seat belts must always be used whenever the car is moving.
- o Seat belts are most effective when seatbacks are in the upright position.
- o Children must always be seatbelted in the rear seats. Never allow children to ride in the front passenger seat.
- o The shoulder belt should be positioned midway over the shoulder nearest the door for the most effective protection. Never wear the seat belt under the arm nearest the door. Wearing the belt under the arm nearest the door could cause serious or fatal injuries in an accident.
- o Avoid wearing twisted seat belts. A twisted belt can't do its job as well. In a collision, it could even cut into you. Be sure the belt webbing is straight and not twisted.
- o Be careful not to damage the belt webbing or hardware. If the belt webbing or hardware is damaged, replace it.

B200A01A-AAT

**Adjusting Your Seat Belt****WARNING:**

You should place the lap belt portion as low as possible and snugly across your hips, not on your waist. If the lap belt is located too high on your waist, it may increase the chance of injury in the event of a collision. Both arms should not be under or over the belt. Rather, one should be over and the other under, as shown in the illustration. Never wear the seatbelt under the arm nearest the door.

B210A01A-AAT

**To Release the Seat Belt**

The seat belt is released by pressing the release button in the locking buckle. When it is released, the belt should automatically draw back into the retractor. If this does not happen, check the belt to be sure it is not twisted, then try again.

B220A03Y-AAT

**SEAT BELTS - Center Rear Seat 3-Point System With Emergency Locking Retractor**

1. Before fastening the rear seat center belt, confirm the metal tab (a) and buckle (b) are latched together.
2. After confirming that (a) and (b) are latched, pull the seat belt out of the retractor and insert the metal tab (c) into the buckle (d).

There will be an audible "click" when the tab locks in the buckle. The seat belt automatically adjusts to the proper length only after the lap belt is adjusted manually so that it fits snugly around your hips. If you lean forward in a slow, easy

motion, the belt will extend and let you move around. If there is a sudden stop or impact, the belt will lock into position. It will also lock if you try to lean forward too quickly.

#### WARNING:

- o When using the rear seat center belt, you must lock all metal tabs and buckles. If any metal tab or buckle is not locked, it will increase the chance of injury in the event of collision.

#### WARNING:

- o Never unlock the metal tab (a) and the buckle (b) with the following exceptions.
  - (1) In case of folding rear seatbacks down.
  - (2) If transporting an object on the rear seat may cause damage to the rear seat center belt.
- o Lock the metal tab (a) and the buckle (b) immediately after folding rear seatbacks up.
- o To disconnect the metal tab (a) from the buckle (b), insert a narrow-ended tool into the groove located on the buckle (b).

B220C01Y-AAT

#### To Release the Seat Belt

When you want to release the seat belt, press the button in the locking buckle.

#### WARNING:

The rear seat center belt latching mechanism is different from those for the outboard rear seat shoulder belts. When fastening the outboard rear seat shoulder belts or the rear seat center belt, make sure they are inserted into the correct buckles to obtain maximum protection from the seat belt system and assure proper operation.

## CHILD RESTRAINT SYSTEM

B230A03Y-AAT

Children riding in the car should sit in the rear seat and must always be properly restrained to minimize the risk of injury in an accident, sudden stop or sudden maneuver. According to accident statistics provided by the National Highway Traffic Safety Administration (NHTSA), children are safer when properly restrained in the rear seats than in the front seat. Larger children not in a child restraint should use one of the seat belts provided.

All 50 states have child restraint laws. You should be aware of the specific requirements in your state. Child and/or infant safety seats must be properly placed and installed in the rear seat. You must use a commercially available child restraint system that meets the requirements of the Federal Motor Vehicle Safety Standards (FMVSS).

Children could be injured or killed in a crash if their restraints are not properly secured. For small children and babies, a child seat or infant seat must be used. Before buying a particular child restraint system, make sure it fits your car seat and seat belts, and fits your child. Follow all the instructions provided by the manufacturer when installing the child restraint system.

**WARNING:**

- o A child restraint system must be placed in the rear seat. Never install a child or infant seat on the front passenger's seat. Should an accident occur and cause the passenger side airbag to deploy, it could severely injure or kill an infant or child seated in an infant or child seat. Thus, only use a child restraint in the rear seat of your vehicle.
- o A safety belt or child restraint system can become very hot if it is left in a closed vehicle on a sunny day, even if the outside temperature does not feel hot. Be sure to check the seat cover and buckles before placing a child there.
- o When the child restraint system is not in use, store it in the trunk or fasten it with a safety belt so that it will not be thrown forward in the case of a sudden stop or an accident.
- o Children who are too large to be in a child restraint should sit in the rear seat and be restrained with the available lap/shoulder belts. Never allow children to ride in the front passenger seat.

**WARNING:**

- o Always make sure that the shoulder belt portion of the lap/shoulder belt is positioned midway over the shoulder and never across the neck or behind the back. Moving the child closer toward the seat belt buckle may help provide a good shoulder belt fit. The lap belt portion of the lap/shoulder belt must always be positioned as low as possible on the child's hips, and as snug as possible.
- o If the seat belt will not properly fit the child, Hyundai recommends the use of an approved booster seat in the rear seat in order to raise the child's seating height so that the seat belt will properly fit the child. Before purchasing a booster seat, make sure that it meets applicable Federal Motor Vehicle Safety Standards and that it is satisfactory for use with this vehicle.
- o Never allow a child to stand up or kneel on the seat.
- o Never use an infant carrier or a child safety seat that "hooks" over a seatback; it may not provide adequate security in an accident.

**WARNING:**

- o Never allow a child to be held in a person's arms while they are in a moving vehicle, as this could result in serious injury to the child in the event of an accident or a sudden stop. Holding a child in a moving vehicle does not provide the child with any means of protection during an accident, even if the person holding the child is wearing a seat belt.

B230B01E-GAT

**Using a Child Restraint System****Rear seat package tray**

Front of Vehicle

B230C02Y-2

For small children and babies, the use of a child seat or infant seat is required. This child seat or infant seat should be of appropriate size for the child and should be installed in accordance with the manufacturer's instructions. It is further required that the seat be placed in the vehicle's rear seat since this can make an important contribution to safety. Your vehicle is provided with three child restraint hook holders on the rear seat package tray for installing the child seat or infant seat.

B230C02Y-AAT

### Installing a Child Restraint seat

1. Position the child restraint seat on the rear passenger seat cushion.
2. Route the child restraint seat tether strap over the back of the seat. For vehicles with adjustable head restraints, route the tether strap under the head restraint and between the head restraint posts, otherwise route the tether strap over the top of the seatback.
3. Locate the correct anchor on the rear seat package tray for the selected seating position.

**!** **WARNING:**  
The tether strap may not work properly if attached somewhere other than the correct tether anchor.

4. Open the tether anchor cover.

5. Clip the tether strap hook to the tether strap hook holder.

**!** **WARNING:**

- o If the tether strap is clipped incorrectly, the child restraint seat may not be restrained properly in the event of a collision.
- o Do not mount more than one child restraint to a single tether or to a child restraint lower anchorage point. The improper increased load may cause the anchorage points or tether anchor to break, causing serious injury or death.

6. Tighten the tether strap to secure the seat.

B230G03Y-AAT

**Installation on Rear Seats**

To install a child restraint system in the rear seats, extend the shoulder/lap belt entirely from its retractor until a "click" is felt. This will engage the seat belt retractor automatic locking feature, which allows the seat belt to retract but not extend. Install the child restraint system, buckle the seat belt and allow the seat belt to take up any slack. Make sure that the lap portion of the belt is tight around the child restraint system and the shoulder portion of the belt is positioned so that it can not interfere with the child's head or neck. Also, double check to be sure that the retractor has engaged the Automatic Locking feature by trying to extend webbing out of the retractor. If the retractor is in the Automatic

Locking mode, the belt will be locked. After installation of the child restraint system, try to move it in all directions to be sure the child restraint system is securely installed. If you need to tighten the belt, pull more webbing toward the retractor. When you unbuckle the seat belt and allow it to retract, the retractor will automatically revert back to its normal seated passenger Emergency Locking usage condition.

**NOTE:**

- o Before installing the child restraint system in any seating position, read the instructions supplied by the child restraint system manufacturer.
- o If the seat belt does not operate as described, have the system checked immediately by your authorized Hyundai dealer.

**WARNING:**

- o If the retractor is not in the Automatic Locking mode, the child restraint system can move when your vehicle turns or stops abruptly.
- o Do not install any child restraint system in the front passenger seat. Should an accident occur and cause the passenger side airbag to deploy, it could severely injure or kill an infant or child seated in an infant or child seat. Therefore, only use a child restraint system in the rear seat of your vehicle.

B230D03E-AAT

## Securing the child Restraint seat with the "ISOFIX" system

B230D01L

Some child seat manufacturers make safety seats that are labeled as ISOFIX or ISOFIX-compatible child seats. These seats include two rigid or webbing mounted attachments that connect to two ISOFIX anchors at specific seating positions in your vehicle. This type of child seat eliminates the need to use seat belts to attach the child seat for forward-facing child seats.

ISOFIX anchors have been provided in your vehicle. The ISOFIX anchors are located in the left and right outboard rear seating positions. Their locations are shown in the illustration. There is no ISOFIX anchor provided for the center rear seating position.

**!** **WARNING:**

- o Do not install a child safety seat at the center of the rear seat using the vehicle's ISOFIX anchors. The ISOFIX anchors are only provided for the left and right outboard rear seating positions. Do not misuse the ISOFIX anchors by attempting to attach a child safety seat in the middle of the rear seat position to the ISOFIX anchors. In a crash, the child seat ISOFIX attachments may not be strong enough to secure the child restraint seat properly in the center of the rear seat and may break, causing serious injury or death.
- o Do not mount more than one child restraint to a single tether or to a child restraint lower anchorage point. The improper increased load may cause the anchorage points or tether anchor to break, causing serious injury or death.
- o Attach the ISOFIX or ISOFIX-compatible child seat only to the appropriate locations shown.
- o Always follow the installation and use instructions provided by the manufacturer of the child restraint.

B230D02L-A

The ISOFIX anchors are located between the seatback and the seat cushion of the rear seat left and right outboard seating positions.

Follow the child seat manufacturer's instructions to properly install safety seats with ISOFIX or ISOFIX-compatible attachments.

Once you have installed the ISOFIX child restraint seat, assure that the seat is properly attached to the ISOFIX and tether anchors. Also, test the safety seat before you place the child in it. Tilt the seat from side to side. Also try to tug the seat forward. Check to see if the anchors hold the seat in place.

**WARNING:**

If the child restraint seat is not anchored properly, the risk of a child being seriously injured or killed in a collision greatly increases.

B180B02A-AAT

**Pre-tensioner Seat Belt**

Your Hyundai vehicle is equipped with driver's and front passenger's pre-tensioner seat belts. The purpose of the pre-tensioner is to make sure that the seat belts fit tightly against the occupant's body in certain frontal collisions. The pre-tensioner seat belts can be activated with the airbags.

When the vehicle stops suddenly, or if the occupant tries to lean forward too quickly, the seat belt retractor will lock into position. In certain frontal collisions, the pre-tensioner will activate and pull the seat belt into tighter contact against the occupant's body.

The seat belt pre-tensioner system consists mainly of the following components. Their locations are shown in the illustration.

1. SRS airbag warning light
2. Seat belt pre-tensioner assembly
3. SRS control module

**WARNING:**

To obtain maximum benefit from a pre-tensioner seat belt:

1. The seat belt must be worn correctly.
2. The seat belt must be adjusted to the correct position.

**NOTE:**

- o Both the driver's and front passenger's pre-tensioner seat belts will be activated in certain frontal collisions. The pre-tensioner seat belts can be activated with the airbags. The pre-tensioners will be activated even if the seat belts are not being worn at the time of the collision.
- o When the pre-tensioner seat belts are activated, a loud noise may be heard and fine dust, which may appear to be smoke, may be visible in the passenger compartment. These are normal operating conditions and are not hazardous.
- o Although it is harmless, the fine dust may cause skin irritation and should not be breathed for prolonged periods. Wash your hands and face thoroughly after an accident in which the pre-tensioner seat belts were activated.

**CAUTION:**

- o Because the sensor that activates the SRS airbag is connected with pre-tensioner seat belt, the SRS airbag warning light  on the instrument panel will blink for approximately 6 seconds after the ignition key has been turned to the "ON" position, and then it should turn off.
- o If the pre-tensioner seat belt is not working properly, this warning light will illuminate even if there is no malfunction of SRS airbag system. If the SRS airbag warning light does not illuminate when the ignition key is turned to "ON" or if it remains illuminated after blinking for approximately 6 seconds, or if it illuminates while the vehicle is being driven, please have an authorized Hyundai dealer inspect the pre-tensioner seat belts and SRS airbag system as soon as possible.

**WARNING:**

- o Pre-tensioners are designed to operate only one time. After activation, pre-tensioner seat belts must be replaced. All seat belts, of any type, should always be replaced after they have been worn during a collision.
- o The pre-tensioner seat belt assembly mechanisms become hot during activation. Do not touch the pre-tensioner seat belt assemblies for several minutes after they have been activated.
- o Do not attempt to inspect or replace the pre-tensioner seat belts yourself. This must be done by an authorized Hyundai dealer.
- o Do not strike the pre-tensioner seat belt assemblies.
- o Do not attempt to service or repair the pre-tensioner seat belt system in any manner.
- o Improper handling of the pre-tensioner seat belt assemblies, and failure to heed the warnings to not strike, modify, inspect, replace, service or repair the pre-tensioner seat belt assemblies may lead to improper operation or inadvertent activation and serious injury.
- o Always wear seat belts when driving or riding in a motor vehicle.

## SUPPLEMENTAL RESTRAINT (AIRBAG) SYSTEM (SRS)

B240A03Y-AAT

Driver's Airbag

B240A01L

Your Hyundai is equipped with a Supplemental Restraint (Airbag) System. The indications of the system's presence are the letters "SRS AIRBAG" embossed on the airbag pad cover in the steering wheel and the passenger's side front panel pad above the glove box.

The Hyundai SRS consists of airbags installed under the pad covers in the center of the steering wheel and the passenger's side front panel above the glove box. The purpose of the SRS is to provide the vehicle's driver and the front passenger with additional protection when used together with the seat belt, in case of a frontal impact.

### NOTE:

Be sure to read information about the SRS on the labels provided on the backside of the sun visor and in the glove box.

### WARNING:

- o As its name implies, the SRS is designed to work with, and be supplemental to, the driver's and the passenger's three point seat belt systems and is not a substitute for them. Therefore your seat belts must be worn at all times while the vehicle is in motion. In addition, the airbags deploy only in certain frontal impact conditions severe enough to likely cause significant injury to the vehicle occupants.
- o The SRS is designed to deploy the airbags only when an impact is sufficiently severe and when the impact angle is less than 30° from the forward longitudinal axis of the vehicle. Additionally, the airbags will only deploy once. Thus, seat belts must be worn at all times.
- o Front airbags are not intended to deploy in light collisions in which protection can be provided by the seat belt alone.

### WARNING:

B240A02L

- o Front airbags are not intended to deploy in side-impact, rear-impact or rollover crashes. In addition, airbags will not deploy in frontal crashes below the deployment threshold speed.
- o The driver should sit back as far as possible while still maintaining control of the vehicle. If you are sitting too close to the airbag, it can cause death or serious injury when it inflates.

**WARNING:**

- o No objects should be placed over or near the airbag modules on the steering wheel, instrument panel, and the front passenger's panel above the glove box, because any such object could cause harm if the vehicle is in a crash severe enough to cause the airbags to deploy.
- o If the airbags deploy, they must be replaced by an authorized Hyundai dealer.
- o Do not tamper with or disconnect SRS wiring, or other components of the SRS system. Doing so could result in injury, due to accidental firing of the airbags or by rendering the SRS inoperative.
- o Do not install a child restraint system in the front passenger seat position. A child restraint system must never be placed in the front seat. The infant or child could be severely injured or killed by an airbag deployment in case of an accident.
- o Do not allow children to ride in the front passenger seat. If older children (teenagers and older) must ride in the front seat, make sure they are always properly belted and that the seat is moved back as far as possible.

**WARNING:**

- o For maximum safety protection in all types of crashes, all occupants including the driver should always wear their seat belts whether or not an airbag is also provided at their seating position to minimize the risk of severe injury or death in the event of a crash. Do not sit or lean unnecessarily close to the airbag while the vehicle is in motion.
- o The SRS airbag system must deploy very rapidly to provide protection in a crash. If an occupant is out of position because of not wearing a seat belt, the airbag may forcefully contact the occupant causing serious or fatal injuries.

B240B02A-AAT

**SRS Components and Functions**

B240B01L

The SRS consists of the following components:

- Driver's Airbag Module
- Passenger's Airbag Module
- Knee Bolster
- SRS Service Reminder Indicator (SRI)
- SRS Control Module (SRSCM)

The SRSCM continually monitors all elements while the ignition is "ON" to determine if a frontal or near-frontal impact is severe enough to require airbag deployment.

The SRS service reminder indicator (SRI) on the instrument panel will blink for about 6 seconds after the ignition key is turned to the "ON" position or after the engine is started, after which the SRI should go out.

The airbag modules are located both in the center of the steering wheel and in the front passenger's panel above the glove box. When the SRSCM detects a considerable impact to the front of the vehicle, it will automatically deploy the airbags.

**CAUTION:**

**Do not install or place any accessories (drink holder, cassette holder, sticker, etc) on the front passenger's panel above the glove box in a vehicle with a passenger's air bag. Such objects may become dangerous projectiles and cause injury if the passenger's air bag inflates.**

B240B02L

Upon deployment, tear seams molded directly into the pad covers will separate under pressure from the expansion of the airbags. Further opening of the covers then allows full inflation of the airbags.

B240B03L

A fully inflated airbag in combination with a properly worn seat belt slows the driver's or the passenger's forward motion, thus reducing the risk of head or chest injury.

After complete inflation, the airbag immediately starts deflating, enabling the driver to maintain forward visibility.

Passenger's Airbag

B240B04L

Passenger's Airbag

B240B05L

**CAUTION:**

When installing a container of liquid air freshener inside the vehicle, do not place it near the instrument cluster nor on the instrument panel surface. If there is any leakage from the air freshener onto these areas (instrument cluster, instrument panel or air ventilator), it may damage these parts. If the liquid from the air freshener does leak onto these areas, wash them with water immediately.

**WARNING:**

- o When the SRS is activated, there may be a loud noise and fine dust will be released throughout the vehicle. These conditions are normal and are not hazardous. However, the fine dust generated during airbag deployment may cause skin irritation. Wash your hands and face thoroughly with lukewarm water and a mild soap after an accident in which the airbags were deployed.

**WARNING:**

- o The SRS can function only when the ignition key is in the "ON" position. If the SRS SRI does not come on, or continuously remains on after flashing for about 6 seconds when the ignition key is turned to the "ON" position, or after the engine is started, comes on while driving, the SRS is not working properly. If this occurs, have your vehicle immediately inspected by your Hyundai dealer.
- o Before you replace a fuse or disconnect a battery terminal, turn the ignition key to the "LOCK" position or remove the ignition key. Never remove or replace the air bag related fuse(s) when the ignition key is in the "ON" position. Failure to heed this warning will cause the SRS SRI to illuminate.

B990A04Y-AAT

**PASSENGER PRESENCE DETECTION**

The passenger presence detection system detects the presence of a passenger in the right front seat. If no passenger is recognized on the front passenger seat, the deployment of the front passenger and/or side airbag and seat belt pre-tensioner will be prevented.

This system is designed to prevent the replacement of airbag components that deploy needlessly in an accident.

**NOTE:**

**Luggage or other cargo heavier than 33lbs (15 kg) should not be placed on the passenger front seat. This can allow the deployment of the front passenger and/or side air bag in the case of an accident.**

**WARNING:**

**The Passenger Presence Detection system is not intended to prevent airbag deployment while a child is in the front passenger's seat. It is intended only as a means to reduce unnecessary collision damage repair expense by preventing airbag and seat belt pretensioner deployment when the right front passenger seat is unoccupied. Deployment is still possible if only a few pounds are placed upon the seat. Therefore, children must not be transported in the front seat. All children must be seated in the rear seat and properly restrained with the vehicle's restraint system or a child restraint system appropriate for the child's size and weight.**

B990B03L-GAT

**Side impact Airbag**

B990B02Y

Your Hyundai is equipped with a side impact airbag in each front seat. The purpose of the airbag is to provide the vehicle's driver and/or the front passenger with additional protection than that offered by the seat belt alone. The side impact airbags are designed to deploy only during certain side impact collisions, depending on the crash severity, angle, speed and point of impact. The side impact airbags are not designed to deploy in all side impact situations.

**WARNING:**

- o The side impact airbag is supplemental to the driver's and the passenger's seat belt systems and is not a substitute for them. Therefore your seat belts must be worn at all times while the vehicle is in motion. The airbags deploy only in certain side impact conditions severe enough to cause significant injury to the vehicle occupants.

**WARNING:**

- o For best protection from the side impact airbag system and to avoid being injured by the deploying side impact airbag, both front seat occupants should sit in an upright position with the seat belt properly fastened. The driver's hands should be placed on the steering wheel at the 9:00 and 3:00 o'clock positions. The passenger's arms and hands should be placed on their laps.
- o Do not use any accessory seat covers.
- o Use of seat covers could reduce or prevent the effectiveness of the system.
- o Do not install any accessories on the side or near the side impact airbag.
- o Do not use excessive force on the side of the seat.
- o Do not place any objects over the airbag or between the airbag and yourself.
- o Do not place any objects (an umbrella, bag, etc.) between the front door and the front seat. Such objects may become dangerous projectiles and cause injury if the supplemental side impact air bag inflates.

**WARNING:**

- o To prevent unexpected deployment of the side impact air bag that may result in personal injury, avoid impact to the side airbag sensor when the ignition key is on.

B240C03A-AAT

**SRS Care**

- o The SRS is virtually maintenance free and there are no parts you can safely service by yourself. The entire SRS system must be inspected by an authorized Hyundai dealer 10 years after the date that the vehicle was manufactured.
- o Any work on the SRS system, such as removing, installing, repairing, or any work on the steering wheel must be performed by a qualified Hyundai technician. Improper handling of the airbag system may result in serious personal injury.

**NOTE:**

Your vehicle's Supplemental Restraint System Control Module is equipped a recording device which may record the use of the seat belt restraint system by the driver and front passenger in certain collisions.

**WARNING:**

- o Do not install a child restraint system in the front passenger seat position. A child restraint system must never be placed in the front seat. The infant or child could be severely injured or killed by an airbag deployment in case of an accident.
- o Modification to SRS components or wiring, including the addition of any kind of badges to the pad covers or modifications to the body structure, can adversely affect SRS performance and lead to possible injury.

**WARNING:**

- o For cleaning the airbag pad covers, use only a soft, dry cloth or one which has been moistened with plain water. Solvents or cleaners could adversely affect the airbag covers and proper deployment of the system.
- o No objects should be placed over or near the airbag modules on the steering wheel, instrument panel, and the front passenger's panel above the glove box, because any such object could cause harm if the vehicle is in a crash severe enough to cause the airbags to inflate.
- o If the airbags inflate, they must be replaced by an authorized Hyundai dealer.
- o Do not tamper with or disconnect SRS wiring, or other components of the SRS system. Doing so could result in injury, due to accidental firing of the airbags or by rendering the SRS inoperative.
- o If components of the airbag system must be discarded, or if the vehicle must be scrapped, certain safety precautions must be observed. Your Hyundai dealer knows these precautions and can give you the necessary information. Failure to follow these precautions and procedures could increase the risk of personal injury.

**WARNING:**

- o If you sell your vehicle, make certain that this manual is transferred to the new owner.
- o If your car was flooded and has soaked carpeting or water on the floor, you shouldn't try to start the engine; have the car towed to an authorized Hyundai dealer.

B240D01JM-AAT

**Additional Safety Precautions**

- o **Never let passengers ride in the cargo area (trunk) or on top of a folded-down back seat.** All occupants should sit upright, fully back in their seats with their seat belts on and their feet on the floor.
- o **Passengers should not move out of or change seats while the vehicle is moving.** A passenger who is not wearing a seat belt during a crash or emergency stop can be thrown against the inside of the vehicle, against other occupants, or out of the vehicle.
- o **Each seat belt is designed to restrain one occupant.** If more than one person uses the same seat belt, they could be seriously injured or killed in a collision.
- o **Do not use any accessories on seat belts.** Devices claiming to improve occupant comfort or reposition the seat belt can reduce the protection provided by the seat belt and increase the chance of serious injury in a crash.
- o **Passengers should not place hard or sharp objects between themselves and the airbags.** Carrying hard or sharp objects on your lap or in your mouth can result in injuries if an airbag inflates.
- o **Keep occupants away from the airbag covers.** All occupants should sit upright, fully back in their seats with their seat belts on and their feet on the floor. If occupants are too close to the airbag covers, they could be injured if the airbags inflate.
- o **Do not attach or place objects on or near the airbag covers.** Any object attached to or placed on the front or side impact airbag covers could interfere with the proper operation of the airbags.
- o **Do not modify the front seats.** Modification of the front seats could interfere with the operation of the supplemental restraint system sensing components or side impact airbags.
- o **Do not place items under the front seats.** Placing items under the front seats could interfere with the operation of the supplemental restraint system sensing components and wiring harnesses.
- o **Never hold an infant or child on your lap.** The infant or child could be seriously injured or killed in the event of a crash. All infants and children should be properly restrained in appropriate child safety seats or seat belts in the rear seat.

**WARNING:**

- o Sitting improperly or out of position can result in serious injury or death in a crash.
- o Always sit upright, fully back in the seat, with your seat belt on, and your feet on the floor.

**Adding Equipment to or Modifying Your Airbag-Equipped Vehicle.**

If you modify your vehicle by changing your vehicle's frame, bumper system, front end or side sheet metal or ride height, this may affect the operation of your vehicle's airbag system.

**INSTRUMENT CLUSTER AND INDICATOR LIGHTS**

B260A04L-AAT

1. Cruise Indicator Light
2. Tachometer
3. Turn Signal Indicator Light
4. Speedometer
5. High Beam Indicator Light
6. Fuel Gauge
7. Traction Control Indicator Light
8. Front Fog Indicator Light
9. Stop/Tail Light Failure Warning Light
10. Parking Brake/Brake Fluid Level Warning Light
11. Seat Belt Warning Light
12. Charging System Warning Light

13. Door Ajar Warning Light
14. Oil Pressure Warning Light
15. Trunk Lid Open Warning Light
16. SRS (Airbag) Warning Light
17. Odometer/ Trip Odometer
18. Odometer/ Trip Odometer Reset Switch
19. Malfunction Indicator Light (MIL)
20. Coolant Temperature Gauge
21. Automatic Transaxle Position Indicator Light
22. Low Fuel Warning Light
23. Anti-Lock Brake Warning Light

## WARNING AND INDICATOR LIGHTS

B260B01L-AAT

**SRS (Airbag) SERVICE  
REMINDER INDICATOR  
(SRI)**

The SRS service reminder indicator (SRI) comes on and flashes for about 6 seconds after the ignition key is turned to the "ON" position or after the engine is started, after which it will go out.

This light also comes on when the SRS is not working properly. If the SRI does not come on, or continuously remains on after flashing for about 6 seconds, or goes out for a second after illuminating for about 6 seconds and then continuously comes on again when you turned the ignition key to the "ON" position or started the engine, or if it comes on while driving, have the SRS inspected by an authorized Hyundai Dealer.

B260D01A-AAT

**TURN SIGNAL INDICATOR  
LIGHTS**

The blinking green arrows on the instrument panel show the direction indicated by the turn signals. If the arrow comes on but does not blink, blinks more rapidly than normal, or does not illuminate at all, a malfunction in the turn signal system is indicated. Your dealer should be consulted for repairs.

B260E01L-AAT

**SEAT BELT REMINDER LIGHT  
AND CHIME**

Seat belt reminder light comes and stays on until the seat belt is fastened when the ignition key is turned "ON" or "START".

And, the warning chime will also sound for about 6 seconds.

B260F01A-AAT

**HIGH BEAM INDICATOR LIGHT**

The high beam indicator light comes on whenever the headlights are switched to the high beam or flash position.

B260G01A-AAT

**LOW OIL PRESSURE  
WARNING LIGHT****CAUTION:**

If the oil pressure warning light stays on while the engine is running, serious engine damage may result. The oil pressure warning light comes on whenever there is insufficient oil pressure. In normal operation, it should come on when the ignition switch is turned on, then go out when the engine is started. If the oil pressure warning light stays on while the engine is running, there is a serious malfunction.

If this happens, stop the car as soon as it is safe to do so, turn off the engine and check the oil level. If the oil level is low, fill the engine oil to the proper level and start the engine again. If the light stays on with the engine running, turn the engine off immediately. In any instance where the oil light stays on when the engine is running, the engine should be checked by a Hyundai dealer before the car is driven again.

B260H01Y-GAT

### Parking Brake/Brake Fluid Level Warning Light

#### WARNING:

If you suspect brake trouble, have your brakes checked by a Hyundai dealer as soon as possible. Driving your car with a problem in either the brake electrical system or brake hydraulic system is dangerous, and could result in a serious injury or death.

#### Warning Light Operation

The parking brake/brake fluid level warning light should come on when the parking brake is applied and the ignition switch is turned to "ON" or "START". After the engine is started, the light should go out when the parking brake is released.

If the parking brake is not applied, the warning light should come on when the ignition switch is turned to "ON" or "START", then go out when the engine starts. If the light comes on at any other time, you should slow the vehicle and bring it to a complete stop in a safe location off the roadway.

The brake warning light indicates that the brake fluid level in the brake master cylinder is low and hydraulic brake fluid conforming to DOT 3 or DOT 4 specifications should be added. After adding fluid, if no other trouble is found, the car should be immediately and carefully driven to a Hyundai dealer for inspection. If further trouble is experienced, the vehicle should not be driven at all but taken to a dealer by a professional towing service or some other safe method. Your Hyundai is equipped with dual-diagonal braking systems. This means you still have braking on two wheels even if one of the dual systems should fail. With only one of the dual systems working, more than normal pedal travel and greater pedal pressure are required to stop the car. Also, the car will not stop in as short a distance with only half of the brake system working. If the brakes fail while you are driving, shift to a lower gear for additional engine braking and stop the car as soon as it is safe to do so.

B260J02A-AAT

### CHARGING SYSTEM WARNING LIGHT

The charging system warning light should come on when the ignition is turned on, then go out when the engine is running. If the light stays on while the engine is running, there is a malfunction in the electrical charging system. If the light comes on while you are driving, stop, turn off the engine and check under the hood. First, make certain the generator drive belt is in place. If it is, check the tension of the belt. Do this as shown on page 6-17 by pushing down on the center of the belt. Have the system checked by your Hyundai dealer as soon as possible.

B260L01Y-AAT

### DOOR AJAR WARNING LIGHT AND CHIME

The door ajar warning light warns you that a door is not completely closed and the chime warns you that driver's side front door is not completely closed.

#### NOTE:

**To remind you not to lock the key inside the car, the warning light comes on whenever the key is in the ignition switch position and a door is open. The warning chime only**

sounds whenever the key is in the "LOCK" position and the driver's side front door is open. The chime sounds and the light remains on until the key is removed from the ignition switch.

B260K01S-AAT

### TRUNK LID OPEN WARNING LIGHT

This light remains on unless the trunk lid is completely closed.

B260M01A-AAT

### LOW FUEL LEVEL WARNING LIGHT

The low fuel level warning light comes on when the fuel tank is approaching empty. When it comes on, you should add fuel as soon as possible. Driving with the fuel level warning light on or with the fuel level below "E" can cause the engine to misfire and damage the catalytic converter.

B260A01B-GAT

### FRONT FOG INDICATOR LIGHT

Front fog indicator light comes on whenever the fog light switch is on.

B260N01A-AAT

### MALFUNCTION INDICATOR LIGHT

This light illuminates when there is a malfunction of an exhaust gas related component, and the system is not functioning properly so that the exhaust gas regulation values are not satisfied. This light will also illuminate when the ignition key is turned to the "ON" position, and will go out in a few seconds. If it illuminates while driving, or does not illuminate when the ignition key is turned to the "ON" position, take your car to your nearest authorized Hyundai dealer and have the system checked.

B260P01L-GAT

### ABS SERVICE REMINDER INDICATOR

When the key is turned to the "ON" position, the Anti-Lock Brake System SRI will come on and then go off in a few seconds. If the ABS SRI remains on, comes on while driving, or does not come on when the key is turned to the "ON" position, this indicates that there may be a problem with the ABS.

If this occurs, have your vehicle checked by your Hyundai dealer as soon as possible. The normal braking system will still be operational, but without the assistance of the anti-lock brake system.

#### WARNING:

If the both ABS SRI and Parking Brake/ Brake fluid level warning lights remain "ON" or come on while driving, there may be a problem with E.B.D. (Electronic brake force distribution).

If this occurs, avoid sudden stops and have your vehicle checked by your Hyundai dealer as soon as possible.

B260C02L-AAT

## TCS TRACTION CONTROL INDICATOR LIGHT

The traction control indicators change operations according to the ignition switch position and whether the system is in operation or not. They will also illuminate when the ignition key is turned to the "ON" or "START" position, but should go out after three seconds. If the TCS indicator stays on, take your car to your authorized Hyundai dealer and have the system checked. See section 2 for more information about the TCS system.

### NOTE:

**When the TCS is manually deactivated, the indicator light remains illuminated until the ignition switch is turned off.**

B260Q01Y-GAT

## CRUISE CRUISE INDICATOR Light (If installed)

The cruise indicator light in the instrument cluster is illuminated only when the vehicle cruising speed has been set using the control switch on the steering wheel.

The indicator light does not illuminate when the main cruise control switch is activated. Information about the use of cruise control is beginning on page 1-75.

B270B01L-AAT

## STOP/TAIL LIGHT FAILURE WARNING LIGHT

If the Stop/Tail Light Failure warning light comes on when the parking brake is applied or the tail light is turned on, check the brake lines or the tail light bulb.

B270A01A-AAT

## BRAKE PAD WEAR WARNING SOUND

The front disc brake pads have wear indicators that should make a high-pitched squealing or scraping noise when new pads are needed. The sound may come and go or be heard all the time when the vehicle is moving. It may also be heard when the brake pedal is pushed down firmly. Excessive rotor damage will result if the worn pads are not replaced. See your Hyundai dealer immediately.

B280A01A-AAT

## FUEL GAUGE

B280A01L

The needle on the gauge indicates the approximate fuel level in the fuel tank. The fuel capacity is given in Section 9.

B290A02A-AAT

## ENGINE COOLANT TEMPERATURE GAUGE

The needle on the engine coolant temperature gauge should stay in the normal range. If it moves across the dial to "H" (Hot), pull over and stop as soon as possible and turn off the engine. Then open the hood and, after the engine has cooled, check the coolant level and the water pump drive belt. If you suspect cooling system trouble, have your cooling system checked by Hyundai dealer as soon as possible.

B300A01A-AAT

## SPEEDOMETER

Your Hyundai's speedometer is calibrated in miles per hour (on the outer scale) and kilometers per hour (on the inner scale).

B330A01L-AAT

## TACHOMETER

The tachometer registers the speed of your engine in revolutions per minute (rpm).

### CAUTION:

The engine should not be raced to such a speed that the needle enters the red zone on the tachometer face. This can cause severe engine damage and may void your warranty.

### WARNING:

Never remove the radiator cap when the engine is hot. The engine coolant is under pressure and could erupt and cause severe burns. Wait until the engine is cool before removing the radiator cap.

B310B01L-AAT

**ODOMETER/TRIP ODOMETER**

B310C01L-A

**Function of digital odometer/trip odometer**

Pushing the reset switch built in the right side of speedometer when the ignition switch is turned "ON" will display the following sequence:

B310B01L-A

**1. Odometer**

The odometer records the total driving distance in miles, and is useful for keeping a record for maintenance intervals.

**NOTE:**

**Any alteration of the odometer may void your warranty coverage.**

**2. Trip odometer**

Records the distance of 2 trips in miles.

**TRIP A** : First distance you have traveled from your origination point to a first destination.

**TRIP B** : Second distance from the first destination to the final destination.

To shift from TRIP A to TRIP B, press the reset switch. When pressed for 1 second, it will reset to 0.

B360B01L-AAT

**Front Fog Light Switch**

HHP269-2

To turn on the front fog lights, place the switch in the "ON" position. They will light when the headlight switch is in the second position.

**NOTE:**

**If you turn on the headlight high beams, the front fog lights are turned off.**

## MULTI-FUNCTION LIGHT SWITCH

B340A01A-AAT

**COMBINATION TURN SIGNAL,  
HEADLIGHT AND HIGH-BEAM  
SWITCH****Turn Signal Operation**

Pulling down on the lever causes the turn signals on the left side of the car to blink. Pushing upwards on the lever causes the turn signals on the right side of the car to blink. As the turn is completed, the lever will automatically return to the center position and turn off the turn signals at the same time. If either turn signal indicator light blinks more rapidly than usual, goes on but does not blink, or does not go on at all, there is a malfunction in the system. Check for a burned-out fuse or bulb or see your Hyundai dealer.

B340B01A-AAT

**Lane Change Signal**

To indicate a lane change, move the lever up or down to a point where it begins flashing. The lever will automatically return to the center position when released.

B340C02E-AAT

**Headlight Switch**

To operate the headlights, turn the barrel on the end of the multi-function switch. The first position turns on the parking lights, sidelights, tail lights and instrument panel lights. The second position turns on the headlights.

**NOTE:**

The ignition must be in the "ON" position to turn on the headlights.

**Parking light auto cut**

If you do not turn the parking lights "OFF" after driving, the parking lights will automatically shut "OFF" when the driver's door is opened. To turn them "ON" again you must simply turn the ignition key to the "ON" position.

B340F01L-GAT

**Auto Light (If Installed)**

To operate the automatic light feature, turn the barrel on the end of the multi-function switch. If you set the multi-function switch to "AUTO", the tail lights and headlights will be turned automatically on or off according to external illumination.

B340D01A-AAT

**High-beam Switch**

To turn on the headlight high beams, push the lever forward (away from you). The High Beam Indicator Light will come on at the same time. For low beams, pull the lever back toward you.

B340E01A-AAT

**Headlight Flasher**

To flash the headlights, pull the switch lever toward you, then release it. The headlights can be flashed even though the headlight switch is in the "OFF" position.

## WINDSHIELD WIPER AND WASHER SWITCH

B350A01A-AAT

B350A01L

The windshield wiper switch has three positions:

1. Intermittent wiper operation
2. Low-speed operation
3. High-speed operation

### NOTE:

To prevent damage to the wiper system, do not attempt to wipe away heavy accumulations of snow or ice. Accumulated snow and ice should be removed manually. If there is only a light layer of snow or ice, operate the heater in the defrost mode to melt the snow or ice before using the wiper.

B350B01Y-GAT

### Windshield Washer Operation

B350B01L

To use the windshield washer, pull the wiper/washer lever toward the steering wheel. When the washer lever is operated, the wipers automatically make two passes across the windshield. The washer continues to operate until the lever is released.

### NOTE:

- o Do not operate the washer more than 15 seconds at a time or when the fluid reservoir is empty.
- o In icy or freezing weather, be sure the wiper blades are not frozen to the glass prior to operating the wipers.
- o In areas where water freezes in winter, use windshield washer antifreeze.

### Mist Wiper Operation

B350B02L

If a single wipe is desired in mist, push the MIST operation switch at the end of the windshield wiper and washer control lever.

B350C01L-AAT

**Adjustable Intermittent Wiper Operation**

B350C01L

To use the intermittent wiper feature, place the wiper switch in the "INT" position. With the switch in this position, the interval between wipes can be varied from approximately 1 to 18 seconds by turning the interval adjuster barrel. This is also varied automatically depending on your road speed.

B350B01B-GAT

**Auto Wiper Operation (If Installed)**

B350B03L

When the windshield wiper switch is placed in the "AUTO" position, the rain sensor located on the upper end of windshield glass senses the amount of rainfall and controls for the appropriate length of the intervals between wipes appropriately.

**NOTE:**

If there is heavy accumulation of snow or ice on the windshield glass, there will be a 10 minute waiting period prior to the operation of the windshield wipers.

**WARNING:**

When the ignition switch is on and the windshield wiper switch is placed in the "AUTO" mode, please use caution in the following cases to avoid any hand injury: As the wiper system may automatically activate, the fingers or hand might be caught in the wiper.

- o Do not touch the upper end of the windshield glass facing the rain sensor.
- o Do not wipe the upper end of the windshield glass with a cloth.
- o Do not put pressure on the windshield glass.

## HAZARD WARNING SYSTEM

B370A01A-AAT

HXGS217

The hazard warning system should be used whenever you find it necessary to stop the car in a hazardous location. When you must make such an emergency stop, always pull off the road as far as possible.

The hazard warning lights are turned on by pushing in the hazard switch. This causes all turn signal lights to blink. The hazard warning lights will operate even though the key is not in the ignition.

To turn the hazard warning lights off, push the switch a second time.

## REAR WINDOW DEFROSTER SWITCH

B380A01HP-GAT

(If Installed)

Manual A/Con

Full automatic A/Con

HXG122

The rear window defroster and heated outside rearview mirrors are turned on by pushing in the switch. At the same time, the rear window defroster indicator light on the switch is turned on. To turn the defroster off, push the switch a second time. The rear window defroster automatically turns itself off after about 20 minutes. To restart the defroster cycle, push in the switch again after it has turned itself off.

### CAUTION:

Do not clean the inner side of the rear window glass with an abrasive type of glass cleaner or use a scraper to remove the foreign deposits from the inner surface of the glass as this may cause damage to the defroster elements.

### NOTE:

The ignition must be in the "ON" position for the rear window defroster to operate.

## DIGITAL CLOCK

B400A01A-AAT

Without Trip Computer

With Trip Computer

HXG516J

There are three control buttons for the digital clock. Their functions are:

- HOUR** - Push "H" to advance the hour indicated.
- MIN** - Push "M" to advance the minute indicated.
- RESET** - Push "R" to reset minutes to ":00" to facilitate resetting the clock to the correct time. When this is done:

Pressing "R" between 10 : 30 and 11 : 29 changes the readout to 11 : 00.

Pressing "R" between 11 : 30 and 12 : 29 changes the readout to 12 : 00.

## TRIP COMPUTER

B400B03L-AAT

**(If Installed)**

Trip computer is a microcomputer-controlled driver information gauge that displays information related to driving, such as estimated distance to empty, average speed and driving time on the LCD.

**MODE**

Pushing "MODE" to select distance to empty, average speed and driving time for the driving information. Each push of the button changes the display as follows;

Distance to empty symbol

B400B05L-A

- o **DISTANCE TO EMPTY** - This mode indicates the estimated distance to empty from the current fuel in the fuel tank. When the remaining distance is below 30 miles(50 km), a blinking "--." symbol will be displayed.

**NOTE:**

- o If the vehicle is not on level ground or the battery power has been interrupted, the "DISTANCE TO EMPTY" function may not operate correctly.
- o The trip computer may not register additional fuel if less than 2 gallons of fuel are added to the vehicle.

- o **AVERAGE SPEED** - This mode indicates the average speed from the starting of the vehicle to the ignition key "OFF". When the ignition key is "OFF", it will initialize to 0 mph (0 km/h).

- o **DRIVING TIME** - This mode indicates the total time from the starting of the vehicle to the ignition key "OFF" after resetting. When the "RESET" switch is pushed, it will initialize to 0:00.

### RESET

Pushing "RESET" more than 1 second to initialize the displayed information such as average speed and driving time.

## INSTRUMENT PANEL LIGHT CONTROL

B410A01A-AAT  
(RHEOSTAT)

The instrument panel lights can be made brighter or dimmer by turning the instrument panel light control knob.

**CIGARETTE LIGHTER**

B420A01A-AAT

B420A02L

For the cigarette lighter to work, the key must be in the "ACC" position or the "ON" position. To use the cigarette lighter, push it all the way into its socket. When the element has heated, the lighter will pop out to the "ready" position. Do not hold the cigarette lighter pressed in. This can damage the heating element and create a fire hazard.

If it is necessary to replace the cigarette lighter, use only a genuine Hyundai replacement or its approved equivalent.

**POWER OUTLET**

B500D07O-GAT

**(If Installed)**

HXG058-1

Without rear ventilator

With rear ventilator

B500D01L

These supply 12V electric power to operate electric accessories or equipment only when the key is in the "ON" or "ACC" position.

**CAUTION:**

**Do not use the power outlet to connect electric accessories or equipment other than those designed to operate on 12 volts.**

## ASHTRAY

B430A01Y-AAT

### FRONT ASHTRAY

The front ashtray may be opened by pushing and releasing the ashtray/cigarette lighter door at its top edge.

To remove the ashtray to clean it, the metal ash receptacle should be removed from the ashtray door. Do not attempt to remove the entire ashtray door assembly or damage will result. Instead, push the metal ash receptacle down and forward in the ashtray door, and it can then be lifted out. To reinstall it, place it in the proper position and press it down and forward to engage the ash receptacle rear lip in the ashtray door. The ashtray light will only illuminate when the exterior body lights are switched on.

B440A02L-AAT

### REAR ASHTRAY

The rear ashtray may be opened by pulling the ashtray lid out. To remove the ashtray to empty or clean it, lift the metal ash receptacle upward and pull it out.

## DRINK HOLDER

B450A01L-GAT

The drink holder is located on the main console for holding cups or cans. The drink holder can be opened by pushing at its top edge.

**CAUTION:**  
Place the drink holder in its closed position when not in use.

## REAR DRINK HOLDER

B450B01L-GAT

HXGS223

The rear drink holder is located on front of the rear seat arm rest for holding cups. The drink holder can be used by pushing it in first and then releasing it.

**CAUTION:**

Place the drink holder in its closed position when not in use.

**WARNING:**

Do not place anything except drinks in the drink holder. Such objects can be thrown out, possibly injuring persons in the vehicle during sudden braking or in the event of an accident.

## SUNROOF

B460A01Y-AAT

**SUNROOF (If Installed)**  
**Sun Shade**

B460A01L

Your HYUNDAI is equipped with a sliding sunshade which you can manually adjust to let in light with the sunroof closed, or to block sunlight.

**WARNING:**

Never adjust the sunshade while driving.

B460B01Y-AAT

**Opening the Sunroof System**

HXGS232

The sunroof can be electrically opened or closed with the ignition key in the "ON" position. To open or to close, press and hold the button located in the front of the roof panel. Release the button when the sunroof reaches the desired position.

**WARNING:**

- o Do not close a sunroof if anyone's hands, arms or body are between the sliding glass and the sunroof sash, as this could result in injury.
- o Do not place your head or arms out of the sunroof opening at any time.

**CAUTION:**

- o Do not open the sunroof in severely cold temperature or when it is covered with ice or snow.
- o Periodically remove any dirt that may have accumulated on the guide rails.

B460C01Y-AAT

**Tilting the Sunroof**

HXGS233

The sunroof can be tilted and closed with the ignition key in the "ON" position. Release the button when the sunroof reaches the desired position.

**NOTE:**

After washing the car or after there is rain, be sure to wipe off any water that is on the sunroof before operating it.

B460D03Y-AAT

**Manual Operation of Sunroof**

If the sunroof does not electrically operate:

1. Remove the rectangular plastic interior light lens in the front of the roof panel.

2. Remove the front overhead light and switch panel.

3. Insert the hexagonal head wrench provided with the vehicle into the socket. This wrench can be found in the vehicle's trunk or glove box.
4. Turn the wrench clockwise to open or counter-clockwise to close the sunroof.

## FRONT MAP LIGHT

B480A01L-GAT  
(With sunroof)

HXG602J

The two map light switches are located on both sides of the interior light. Push in the map light switch to turn the light on or off.

B480B01Y-AAT  
**FRONT MAP LIGHT**  
(Without Sunroof)

B480B01L

Push in the map light switch to turn the light on or off. This light produces a spot beam for convenient use as a map light at night or as a personal light for the driver and the passenger.

## INTERIOR LIGHT

B490A01L-AAT  
**Front overhead console light**

With Sunroof

HXG602J-1

The interior courtesy light has three buttons. The three buttons are:

o **DOOR**

In the "DOOR" position, the interior courtesy light comes on when any door is opened regardless of the ignition key position. The light goes out gradually 6 seconds after the door is closed.

o **ON**

In the "ON" position, the light stays on at all times.

o **OFF**

In the "OFF" position, the light stays off at all times even though a door is open.

## SPECTACLE CASE

B490C01L-AAT

**Rear room light**

HSM045

The interior courtesy light has three buttons. The three buttons are:

- o **DOOR**

In the "DOOR" position, the interior courtesy light comes on when any door is opened regardless of the ignition key position. The light goes out gradually 6 seconds after the door is closed.

- o **ON**

In the "ON" position, the light stays on at all times.

- o **OFF**

In the "OFF" position, the light stays off at all times even though a door is open.

B490B01L-GAT

**Personal Light (If Installed)**

B490B01L

The personal lights are located on both of the rear pillars. Push the personal light switch to turn the lights on or off.

B491A02F-AAT

**(If Installed)**

HXG303

The spectacle case is located on the front overhead console. Push the end of the cover to open or close the spectacle case.

**WARNING:**

**Do not open the spectacle case while the vehicle is moving.**

**The rear view mirror of the vehicle can be blocked by an open spectacle case.**

## GLOVE BOX

B500A01S-AAT

HXG513

### WARNING:

To avoid the possibility of injury in case of an accident or a sudden stop, the glove box door should be kept closed when the car is in motion.

- o To open the glove box, pull on the glove box release lever.
- o The glove box door can be locked (and unlocked) with the key.

## MIRROR

B510B01L-AAT

### OUTSIDE REARVIEW MIRROR

#### Electric Type

B510B01L

The outside rearview mirrors can be adjusted in any direction to give the maximum rearview vision.

The remote control outside rearview mirror switch controls the adjustments for both right and left outside mirrors.

#### To adjust the position of either mirror:

1. Move the selecting switch to the right or left to activate the adjustable mechanism for the corresponding door mirror.
2. Now, adjust mirror angle by depressing the appropriate directional switch as illustrated.

HXGS252

### CAUTION:

- o Do not operate the switch continuously for an unnecessary length of time.
- o Scraping ice from the mirror face could cause permanent damage. To remove any ice, use a sponge, soft cloth or approved de-icer.

### WARNING:

Be careful when judging the size or distance of any object seen in the passenger side rear view mirror. It is a convex mirror with a curved surface. Any objects seen in this mirror are closer than they appear.

B510D01HP-GAT

## OUTSIDE REAR VIEW MIRROR HEATER (If installed)

Manual A/Con

Full automatic A/Con

HXG122

The outside rearview mirror heater is actuated in connection with the rear window defroster. To heat the outside rearview mirror glass, push in the switch for the rear window defroster. The rearview mirror glass will be heated for defrosting or defogging and will give you improved rear vision in inclement weather conditions. Push the switch again to turn the heater off. The outside rearview mirror heater automatically turns itself off after 20 minutes.

B510C03A-AAT

## FOLDING THE OUTSIDE REAR VIEW MIRRORS

B510C01L

To fold the outside rear view mirrors, push them toward the rear. The outside rear view mirrors can be folded rearward for parking in narrow areas. To unfold the outside rear view mirrors, push them toward the front.

### WARNING:

Do not adjust or fold the outside rear view mirrors while the vehicle is moving. This could result in loss of control, and an accident which could cause serious injury or death.

B520A01A-AAT

## DAY/NIGHT INSIDE REAR VIEW MIRROR

HXG514J

Your Hyundai is equipped with a day/night inside rear view mirror. The "night" position is selected by flipping the tab at the bottom of the mirror toward you. In the "night" position, the glare of headlights of cars behind you is reduced.

## HOMELINK MIRROR

B520B01O-GAT

### DAY/NIGHT REAR VIEW MIRROR (Electric type) (If Installed)

The electric type day/night inside rearview mirror automatically controls the glare of headlights of the car behind you. Adjust the rearview mirror to the desired position.

B520C01L-GAT

### (If Installed)

Your new vehicle may be equipped with an automatic night vision mirror. During nighttime driving, this feature will automatically detect and reduce dangerous rearview mirror glare.

Your new mirror also comes with an integrated HomeLink Universal Transceiver, which allows you to program up to 3 buttons on the mirror to activate your garage door(s), estate gate, home lighting, etc. The mirror actually learns the codes from your various existing transmitters.

## Automatic-Dimming Function

To assist you during nighttime driving, your mirror will automatically dim upon detecting glare from the vehicles behind you.

Press the  button to turn the automatic-dimming function off. The mirror indicator light will turn off.

Press the  button to turn the automatic-dimming function on. The mirror indicator light will illuminate.

### NOTE:

The mirror defaults to the "on" position each time the vehicle is started.

## HOMELINK PROGRAMMING

### CAUTION:

- o Make sure people and/or objects are out of the way of any garage doors or gates you may be operating during the programming procedures.
- o Keep original transmitters for potential future programming needs, or in case you sell the vehicle.
- o In the event you do sell your vehicle, it's recommended you erase your programmed HomeLink mirror buttons.

### WARNING:

Do not use HomeLink with any garage door opener that lacks the safety stop and reverse feature as required by federal safety standards (includes garage doors manufactured before April 1, 1982), as these doors can increase the risk of serious injury or death. Call 1-800-355-3515 or visit [www.homelink.com](http://www.homelink.com) for more information.

### NOTE:

If programming a garage door opener or gate, it is advised to unplug the device during the "cycling" process to prevent possible motor burnout.

## Programming

Ensure the ignition switch is turned to the "ACC" position to program and/or operate HomeLink system. It is also recommended that a new battery be placed in the handheld transmitter of the device being programmed to HomeLink for quicker programming and accurate transmission of the radio-frequency. Follow these steps to program your HomeLink mirror:

1. When programming the buttons for the first time, press and hold the two outside HomeLink buttons (⏏, ⏏), releasing when the indicator light begins to flash (approximately 20 seconds). This procedure erases the factory-set default codes. Do not perform this step when programming additional transmitters.

2. Hold the transmitter of the device you want to program 1 to 3 inches away from the bottom of the mirror. Simultaneously press the handheld transmitter button and the HomeLink button you wish to program. The indicator light will flash slowly at first, then rapidly, indicating successful programming.

- If the garage door opener or other device you wish to program is rolling-code equipped, proceed to the "Rolling Code Programming" section.
- Repeat step 2 to program the remaining HomeLink buttons.

### Additional Programming for Rolling Code Devices

For any rolling-code-equipped device; follow the steps additional below after completing the "Programming" section. A second person may make the following steps easier.

- Locate the "learn" or "smart" button on the device's motor head unit. The exact location and color of the button varies by product brand, but is usually referenced in the device's owner's manual. Contact HomeLink at 1-800-355-3515 or [www.homelink.com](http://www.homelink.com) for help.
- Press and release the "learn" or "smart" button on the device's motor head unit.

#### NOTE:

You now have 30 seconds to initiate step 3.

- Return to the vehicle and firmly press and release the programmed HomeLink button. Press and release the same HomeLink button a second time to complete the programming process. (Some devices may require you to press and release a third time to complete the programming.)
- Now HomeLink mirror and rolling-code-equipped device should be synchronized. The remaining HomeLink buttons may now be programmed if this has not been done previously.

### Operating HomeLink

Simply press the appropriate HomeLink button to activate the trained product (garage door, security system, entry door lock, estate gate, lighting, etc.). The original handheld transmitters may also be used at any time.

### Erasing Programmed Buttons

B520C02L

To erase the three HomeLink buttons, press and hold the two outside buttons until the indicator light begins to flash (after 20 seconds). Release both buttons.

Individual buttons cannot be erased, but can be reprogrammed.

## PARKING BRAKE

## Reprogramming a Single HomeLink Button

To program a device to HomeLink using a HomeLink button previously trained, follow these steps:

1. Press and hold the desired HomeLink button. Do not release until step 4 has been completed.
2. When the indicator light begins to flash slowly (after 20 seconds), hold the handheld transmitter 1 to 3 inches away from the bottom of the mirror.
3. Press and hold the transmitter button (or, if necessary, press and "cycle," as described in the "Gate Operator & Canadian Programming" portion of this text).
4. The HomeLink indicator light will flash slowly at first, then rapidly, indicating successful programming. Release both buttons.

## Gate Operator Programming & Canadian Programming

During programming, your handheld transmitter may automatically stop transmitting. Continue to press and hold the HomeLink button while you press and repress ("cycle") your handheld transmitter every two seconds until the frequency signal has been learned. The indicator light will flash slowly at first and then rapidly upon successful programming.

### Accessories

For more information on HomeLink and HomeLink-compatible products, or to purchase HomeLink accessories, call 1-800-355-3515 or visit [www.homelink.com](http://www.homelink.com).

### B530B01L-GAT (Foot type)

- o To engage the foot type parking brake, depress the parking brake pedal beneath the left side of the lower instrument panel.
- o To release the parking brake, pull up the parking brake release lever at the left side of the instrument panel.

## TRUNK LID

B540A01S-AAT

### Remote Trunk Lid Release

To open the trunk lid without using the key, pull up the lid release lever located on the driver's door panel.

To close, lower the trunk lid, then press down on it until it locks. To be sure the trunk lid is securely fastened, always check by trying to pull it up again.

#### WARNING:

The trunk lid should always be kept completely closed while the vehicle is in motion. If it is left open or ajar, exhaust gases may enter the car and serious illness or death may result. See additional warnings concerning exhaust gases on page 2-2.

B540B02L-AAT

### Trunk Lid Knob Lock (If Installed)

If the trunk lid lock knob (located near the latch) is in the "LOCK" position when the trunk lid is closed, it will not be possible to open the trunk lid by using the remote release. In this instance, use the master key to unlock and open the trunk lid.

To allow the trunk lid to be opened with the remote release, push the trunk lid lock knob down, to the opposite direction of the "LOCK" position.

#### WARNING:

Doors and trunk should be kept locked and keys be kept out of the reach of children. Parents also should teach their children about the dangers of playing in trunks.

B540B02E-AAT

**Trunk Lid Emergency Latch Release**

Your vehicle is equipped with a glow-in-the dark emergency trunk release lever located inside the trunk. It will glow after the trunk is closed. When pulled, this lever will release the trunk latch mechanism and open the trunk.

**WARNING:**

- o If a person is locked in the trunk, pull the emergency trunk release lever on the driver's side of the inside panel of the trunk to open the trunk lid.
- o HYUNDAI recommends that cars be kept locked and keys be kept out of the reach of children, and that parents teach their children about the dangers of playing in trunks.
- o Parents should teach children about the emergency trunk release lever in their vehicle and how to open the trunk lid if they are accidentally locked in the trunk.

B540C02Y-AAT

**To unlock using the key**

To open the trunk lid, insert the key and turn it clockwise to unlock. The trunk compartment light illuminates when the trunk lid is opened.

B550A02Y-AAT

### HIGH-MOUNTED REAR STOP LIGHT

B550A03L

In addition to the lower-mounted rear stoplights on either side of the car, the high mounted rear stoplight in the center of the rear window also lights when the brakes are applied.

### REMOTE FUEL-FILLER LID RELEASE

B560A03Y-AAT

HXGS207

The fuel-filler lid may be opened from inside the vehicle by pulling up on the fuel-filler lid opener located on the front floor area on the left side of the car.

#### NOTE:

If the fuel-filler lid will not open because ice has formed around it, tap lightly or push on the lid to break the ice and release the lid. Do not pry on the lid. If necessary, spray around the lid with an approved deicer fluid (do not use radiator anti-freeze) or move the vehicle to a warm place and allow the ice to melt.

HXGS255

#### WARNING:

- o The fuel cap must be tightened at least 3 clicks, otherwise  light will illuminate.
- o Gasoline vapors are dangerous. Before refueling, always stop the engine and never allow sparks or open flames near the filler area. If you need to replace the filler cap, use a genuine Hyundai replacement part.

**WARNING:**

- o If you open the fuel filler cap during high ambient temperatures, a slight "pressure sound" may be heard. This is normal and not a cause for concern. Whenever you open the fuel filler cap, turn it slowly.
- o Make sure the fuel filler cap is replaced and securely seated after fueling. Failure to replace or fully seat the fuel filler cap will result in fuel vapors escaping into the atmosphere and the MIL indicator illuminating.
- o Do not "TOP-OFF" after the first nozzle shut off when refueling.
- o Automotive fuels are flammable/explosive materials. When refueling, please note the following guidelines carefully.
- o Before touching the fuel nozzle or fuel filler cap, have one's hands in contact with metal parts away from the filler neck to discharge static electricity.
- o Do not get back in the vehicle while refueling. Do not operate anything that can produce static electricity. Static electricity discharge can ignite fuel vapors resulting in explosion.

**WARNING:**

- o When using a portable fuel container be sure to place the container on the ground while refueling. Static electricity discharge from the container can ignite fuel vapors causing a fire. While starting refueling contact should be maintained until the filling is complete.
- o Do not use cellular phones around a gas station. The electric current or electronic interference from cellular phones can ignite fuel vapors causing a fire.
- o When refueling always shut the engine off. Sparks by electrical equipment of the engine can ignite fuel vapors causing a fire. After refueling, check to make sure the fuel filler cap is securely closed, and then start the engine.
- o Do not smoke or try to light cigarettes around a gas station. Automotive fuels are flammable.

B560B01L-GAT

**Manual Fuel Filler Lid Release**

If the fuel filler lid cannot be opened using the remote opener, a manual opener handle is located inside the trunk on the left side. Open the fuel filler lid by pulling on this handle as shown in the illustration.

72 HOOD RELEASE

B570A01L-GAT

1. Pull the release knob to unlatch the hood.

HXGS208

2. Press the secondary latch lever up and lift the hood.
3. Raise the hood by hand.

When closing the hood, slowly close the hood and make sure it locks into place.

**!** **WARNING:**

- o Always double check to be sure that the hood is firmly latched before driving away. If it is not latched, the hood could fly open while the vehicle is being driven, causing a total loss of visibility, which might result in an accident.
- o Do not move the vehicle with the hood in the raised position, as vision is obstructed and the hood could fall or be damaged.

ACCESSORY BOX

B500A01L-GAT

HXG111

The accessory box may be opened by pushing at its top edge. It is used for storing small items.

## FLOOR MAT ANCHOR

B571A03Y-AAT

HXGS263

When using a floor mat on the front floor carpet, make sure it attaches to the floor mat anchor in your vehicle. This keeps the floor mat from sliding forward.

### WARNING:

- o Make sure the floor mat is properly placed on the floor carpet. If the floor mat slips and interferes with the movement of the pedals during driving, it may cause an accident.
- o Don't put a additional floor mat on the top of the fixed mat, otherwise the additional mat may slide forward and interfere with the movement of the pedals.

## CD Auto Changer

B450B01E-GAT

(If Installed)

B450B01L

The CD Auto Changer is located in the left side of the trunk. This system can store up to 8 CDs. You may select music without changing disks. First, open the CD Auto Changer door, remove the CD "magazine", and insert up to 8 CDs. Then, push the magazine into the CD Auto Changer. The CD may be operated with the passenger compartment audio system controls.

## SUN VISOR

B580A01L-GAT

B580A01L

Your Hyundai is equipped with sun visors to give the driver and front passenger either frontal or sideward shade. To reduce glare or to shut out direct rays of the sun, turn the sun visor down. A vanity mirror is provided on the back of the sun visor for the driver and the front passenger.

### NOTE:

The Supplemental Restraint System (SRS) label containing useful information can be found on the back of each sun visor.

**!** **WARNING:**  
Do not place the sun visor in such a manner that it obscures visibility of the roadway, traffic or other objects.

B580B03Y-AAT

### Illuminated Vanity Mirror (If Installed)

The mirror light turns on at all times when the lid is opened.

## DOOR COURTESY LIGHT

B620A01L-AAT

B620A01L

A red light comes on when the door is opened. The purpose of this light is to assist when you get in or out, and also to warn passing vehicles.

## HORN

B610A01Y-AAT

HXGS218

Press the pad on the steering wheel to sound the horn.

## REAR SEAT ARM REST

B611A02L-AAT

HXGS601J

The rear seat arm rest is located in the center of the rear seat back. A storage box is included for convenience.

## STEERING WHEEL TILT LEVER

B600A01HP-GAT

HXG609J

To adjust the steering wheel:

1. Pull the lever toward you and hold it to unlock.
2. Raise or lower the steering wheel to the desired position.
3. After adjustment, release the lever.

### WARNING:

Do not attempt to adjust the steering wheel while driving as this may result in loss of control of the vehicle and serious injury or death.

## CRUISE CONTROL

B660A01S-AAT

B660A01L

The cruise control system provides automatic speed control for your comfort when driving on freeways, tollroads, or other noncongested highways. This system is designed to function above approximately 25 mph (40 km/h).

B660B01L-AAT

### To Set the Cruise Speed

1. Push in the cruise control main switch. This turns the system on.
2. Accelerate to desired cruising speed above 25 mph (40 km/h).
3. Push the control switch "SET" (COAST) position. The "CRUISE" indicator light in the instrument cluster will illuminate after you have set the vehicle speed at the desired speed.
4. Remove your foot from the accelerator pedal and the desired speed will automatically be maintained.
5. To increase speed, depress the accelerator pedal enough for the vehicle to exceed the preset speed. When you remove your foot from the accelerator pedal, the vehicle will return to the speed you have set.

B660C03L-AAT

### To Cancel the Cruise Speed

Do one of the following:

- o Push the control switch "CANCEL".
- o Depress the brake pedal.
- o Release the main switch.

#### NOTE:

**If the vehicle speed decreases more than 9 mph (15 km/h) below the set speed or decreases below 25 mph (40 km/h), the cruise control system will automatically cancel the set speed.**

B660D01L-AAT

### To Resume the Preset Speed

The vehicle will automatically resume the speed set prior to cancellation when you push the control switch "RESUME (ACCEL)" (above 25 mph).

B660E01L-GAT

### To Reset at a Faster Speed

1. Push the control switch "RESUME (ACCEL)"
2. Accelerate to desired speed. While the control switch is held, the vehicle will gradually gain speed.

B660F01L-AAT

**To Reset at a Slower Speed**

1. Push the control button "SET (COAST)". The vehicle will decelerate.
2. When the desired speed is obtained, release the control button. While the control switch is pushed, the vehicle speed will gradually decrease.

**WARNING:**

- o Keep the main switch off when not using the cruise control.
- o Do not use the cruise control when it may not be safe to keep the car at a constant speed, for instance, driving in heavy or varying traffic, or on slippery (rainy, icy or snow-covered) or winding roads or over 6% up-hill or down-hill roads.
- o Pay particular attention to the driving conditions whenever using the cruise control system.
- o During normal cruise control operation, when the "SET" button is activated or reactivated after applying the brakes, the cruise control will energize after approximately 3 seconds. This delay is normal.

## HEATING AND COOLING CONTROL

B710A01L-GAT

1. Side Ventilator
2. Side Defrost Nozzle
3. Center Ventilator
4. Windshield Defrost Ventilator

## VENTILATION

B710A01L-AAT

To operate the ventilation system:

- o Set the air intake control at the fresh air (🌬️) position.
- o To direct all intake air to the dashboard vents, set the airflow control to the face (👤) position.
- o Adjust the fan speed control to the desired speed.

B710B01A-AAT

### Center Ventilator

The center ventilators are located in the middle of the dashboard.

To change the direction of the airflow, turn the control knob on the middle of the ventilator as desired.

B710C01Y-AAT

### Side Ventilator

The side vent knobs control the amount of outside air entering the vehicle through the side vents. These vents can also be closed, so no air enters through the side vents. To change the direction of the air flow, turn the control knobs as desired.

B710A01L-1

B680A02L-GAT

### ROTARY AND PUSH BUTTON TYPE (If Installed)

There are four controls for the heating and cooling system. They are:

1. Fan speed control
2. Air intake control
3. Air flow control
4. Temperature control

B670B03Y-AAT

### Fan Speed Control (Blower Control)

This is used to turn the blower fan on and off and to select the fan speed.

The blower fan speed, and therefore the volume of air delivered from the system, may be controlled manually by setting the blower control between the 1 and 4 position.

B670C01Y-AAT

### Air Intake Control

This is used to select fresh outside air or recirculating inside air.

**Fresh**  
**Recirculation**

With the "Fresh" mode selected, air enters the vehicle from outside and is heated or cooled according to the other functions selected.

With the "Recirculation" mode selected, air from within the passenger compartment is drawn through the heating system and heated or cooled according to the other functions selected.

**NOTE:**

- o It should be noted that prolonged operation of the heating system in "☁" mode will give rise to misting of the windshield and side windows and the air within the passenger compartment will become stale. In addition prolonged use of the air conditioning with the "☁" mode selected may result in the air within the passenger compartment becoming excessively dry.
- o When the ignition switch is turned "ON", the air intake control will change to "☁" mode (regardless of switch position). This is normal operation.

B670D01L-AAT

**Air Flow Control**

HEF030

This is used to direct the flow of air. Air can be directed to the floor, dashboard outlets, or windshield. Five symbols are used to represent Face, Bi-Level, Floor, Floor-Defrost and De-frost air position.

B670D02L-1

**Face-Level**

Selecting the "Face" mode will cause air to be discharged through the face level vents.

### Bi-Level

Air is discharged through the face vents and the floor vents. This makes it possible to have cooler air from the dashboard vents and warmer air from the floor outlets at the same time.

### Floor-Level

Air is discharged through the floor vents, windshield defroster nozzle, side defroster nozzle, side ventilator.

### Floor-Defrost Level

Air is discharged through the windshield defrost nozzle, the floor vents, side defroster nozzle, side ventilator. If the "Floor-Defrost" mode is selected, the A/C will turn on automatically and "Fresh" mode will be activated.

B670D06L-1

 **Defrost-Level**

Air is discharged through the windshield defrost nozzle, side defroster nozzle, side ventilator. If the "Defrost" mode is selected, the A/C will turn on automatically and "Fresh" mode will be activated.

B670E02A-AAT

**Temperature Control**

HXG124

This control is used to adjust the degree of heating or cooling desired.

**HEATING CONTROLS**

B690A01E-AAT

HXG119

For normal heating operation, set the air intake control to the fresh air () position and the air flow control to the floor () position.

For faster heating, the air intake control should be set in the recirculate () position.

If the windows fog up, set the air flow control to the defrost () position. (The A/C will be on automatically and "Fresh" mode will be activated.)

For maximum heat, move the temperature control to "Warm".

## BI-LEVEL HEATING

B700A01A-AAT

B700A01L

Your Hyundai is equipped with bi-level heating controls. This makes it possible to have cooler air from the dashboard vents and warmer air from the floor outlets at the same time. To use this feature:

- o Set the air intake control to the fresh air (🚗) position.
- o Set the air flow control at the bi-level (🌀) position.
- o Set the temperature control between "Cool" and "Warm"

B730A01L-AAT

### OPERATION TIPS

B730A01L

- o To keep dust or unpleasant fumes from entering the car through the ventilation system, temporarily set the air intake control to the 🚗 position. Be sure to return the control to the 🚗 position when the irritation has passed to keep fresh air in the vehicle. This will help keep the driver alert and comfortable.
- o Air for the heating/cooling system is drawn in through the grilles just ahead of the windshield. Care should be taken that these are not blocked by leaves, snow, ice or other obstructions.

- o To prevent interior fog on the windshield, set the air intake control to the fresh air (🚗) position, fan speed to the desired position, turn on the air conditioning system, and adjust temperature control to desired temperature.

## AIR CONDITIONING SYSTEM

B740A01S-AAT

### Air Conditioning Switch

The air conditioning is turned on or off by pushing the A/C button on the heating/air conditioning control panel.

B740B01L-GAT

### Air Conditioning Operation (If Installed) Cooling

To use the air conditioning to cool the interior:

- o Set the side vent control to "OFF", to shut off the outside air entry.
- o Turn on the fan control switch.
- o Turn on the air conditioning switch by pushing in on the switch. The air conditioning indicator light should come on at the same time.
- o Set the air intake control to the fresh air (↻) position.
- o Set the temperature control to "Cool". ("Cool" provides maximum cooling. The temperature may be moderated by moving the control toward "Warm".)

- o Adjust the fan control to the desired speed. For greater cooling, turn the fan control to one of the higher speeds or temporarily select the recirculate (↻) position on the air intake control.

B740C01A-AAT

### De-Humidified Heating For dehumidified heating:

- o Turn on the fan control switch.
- o Turn on the air conditioning switch. The air conditioning indicator light should come on at the same time.
- o Set the air intake control to the fresh air (↻) position.
- o Set the air flow control to the face (↻) position.
- o Adjust the fan control to the desired speed.
- o For more rapid action, set the fan at one of the higher speeds.
- o Adjust the temperature control to provide the desired amount of warmth.

B720A01E-AAT

**DEFROSTING/DEFOGGING**

Use the heating/ventilation system to defrost or defog the windshield:

**To remove interior fog on the windshield;**

- o Set the air flow control to the defrost (☃) position.  
(The A/C will turn on automatically and "Fresh" mode will be activated.)
- o Set the temperature control to the desired position.
- o Set the fan speed control between "1" and "4" position.

**To remove frost or exterior fog on the windshield;**

- o Set the air flow control to the defrost (☃) position.  
(The A/C will turn on automatically and "Fresh" mode will be activated.)
- o Set the temperature control to warm.
- o Set the fan speed control to position "3" or "4".

**NOTE:**

**When the A/C is operated continuously on the floor-defrost level (☃) or defrost level (☃), it may cause fog to form on the exterior windshield. If this occurs set the air flow control to the face level position (☃) and fan speed control to the low position.**

## AUTOMATIC HEATING AND COOLING CONTROL SYSTEM

B970A01Y-AAT

**(If Installed)**

Your Hyundai is equipped with an automatic heating and cooling control system controlled by simply setting the desired temperature.

B970B01L-GAT

**Heating and Cooling Controls**

1. Blower Fan Control Switch
2. AUTO (Automatic Control) Switch
3. OFF Switch
4. Display Window
5. Temperature Control Button
6. Defroster Switch
7. Air Conditioning Switch
8. Air Flow Control Switch
9. Air Intake Control Switch/Air Quality System Switch (If installed)
10. Ambient Temperature Switch
11. Rear Window Defroster Switch
12. Rear Ventilator Switch (If installed)

B970C02L-AAT

## Automatic Operation

The FATC (Full Automatic Temperature Control) system automatically controls heating and cooling as follows:

1. Push the "AUTO" switch. The indicator light will illuminate confirming that the Face, Floor and/or Bi-Level modes as well as the blower speed and, air conditioner will be controlled automatically.

2. Push the "TEMP" button to set the desired temperature. The temperature will increase to the maximum 90°F(32°C) by pushing on the ▲ button. Each push of the button will cause the temperature to increase by 1°F (0.5°C). The temperature will decrease to the minimum 62°F(17°C) by pushing on the ▼ button. Each push of the button will cause the temperature to decrease by 1°F (0.5°C).

### NOTE:

If the battery has been discharged or disconnected, the temperature mode will reset to centigrade degrees.

This is a normal condition and you can change the temperature mode from centigrade to fahrenheit as follows;

Press the TEMP button down 3 seconds or more with the AMB button held down. The display shows that the unit of temperature is adjusted to centigrade or fahrenheit.

(°C → °F or °F → °C)

### NOTE:

Never place anything over the sensor which is located on the instrument panel to ensure better control of the heating and cooling system.

B995A01Y-GAT

### AMBIENT TEMPERATURE SWITCH

Pressing the AMB button displays the ambient temperature on the display.

B980A01Y-AAT

### MANUAL OPERATION

The heating and cooling system can be controlled manually as well by pushing buttons other than the "AUTO" button. In this state, the system sequentially works according to the order of buttons selected.

The function of the buttons which are not selected will be controlled automatically.

Press the "AUTO" button in order to convert to automatic control of the system.

B980B02Y-AAT

### Fan Speed Control Switch

The fan speed can be set to the desired speed by pressing the appropriate fan speed control button. To increase fan speed press the  $\wedge$  arrow. To decrease fan speed, press the  $\vee$  arrow. The higher the fan speed is, the more air is delivered. Pressing the "OFF" button turns off the fan.

B980C02E-GAT

### Air Intake Control Switch (With A.Q.S) (If Installed)

This is used to select fresh outside air or recirculate inside air automatically.

— : OFF  
 — : ON

— —  
 (A) (C) **Fresh mode :**

Air enters the vehicle from the outside and is heated or cooled according to the function selected.

 **Recirculation mode :**

Air from within the passenger compartment will be drawn through the heating system and heated or cooled according to the function selected.

 **Exhaust gas cutoff mode :**

Air enters the vehicle from the outside. But if exhaust gas enters the vehicle from the outside, the exhaust gas cutoff mode () is automatically converted to the () mode, to prevent exhaust gas from entering the vehicle.

**NOTE:**

- o It should be noted that prolonged operation of the heating system in recirculation mode () will give rise to misting of the windshield and side windows and the air within the passenger compartment will become stale. In addition, prolonged use of the air conditioning with the recirculation mode () selected may result in the air within the passenger compartment becoming excessively dry.
- o When the ignition switch is turned "ON", the air intake control will change to () mode (regardless of switch position). This is normal operation. The air intake control operates in "AUTO" mode when turning the ignition to the ON position if the "AUTO" mode was used before shutting off the engine.

**CAUTION:**

If the windows fog up with the Recirculation or A.Q.S mode selected, set the air intake control to the Fresh air position or A.Q.S control to "OFF".

B980D01Y-AAT

**Heating and Cooling System Off**

Press the "OFF" button to stop the operation of the heating and cooling system.

B980E01L-GAT

**Air Flow Control**

This is used to direct the flow of air. Air can be directed to the floor, dashboard outlets, or windshield. Four symbols are used to represent Face, Bi-Level, Floor and Floor-Defrost air position.

 **Face-Level**

When selecting the "Face" mode, the indicator light will come on, causing air to be discharged through the face level vents.

 **Bi-Level**

When selecting the "Bi-Level" mode, the indicator light will come on and the air will be discharged through the face vents and the floor vents. This makes it possible to have cooler air from the dashboard vents and warmer air from the floor outlets at the same time.

 **Floor-Level**

When selecting the "Floor-Level" mode, the indicator light will come on and the air will be discharged through the floor vents, windshield defrost nozzle, side defroster nozzle, side ventilator.

B670D05L-1

### Floor-Defrost Level

When selecting the "Floor-Defrost" mode, the indicator light will come on and the air will be discharged through the windshield defrost vents, the floor vents, side defroster nozzle side ventilator .

B980C02L-AAT

### Defrost Switch

B980C01L

When the "Defrost" button is pressed, the "☀️" mode will be automatically selected and the air will be discharged through the windshield defrost nozzle, side defroster nozzle and side ventilator. To assist in defrosting the air conditioning will operate if ambient temperature is higher than 38.3°F (3.5°C) and automatically turns off if the ambient temperature drops below 38.3°F (3.5°C).

## AIR CONDITIONER FILTER (FOR EVAPORATOR AND BLOWER UNIT)

B760A01L-AAT

B760A01Y

The air conditioner filter is located in front of the evaporator unit behind the glove box.

It operates to decrease pollutants from entering the car and to filter the air.

To replace the air conditioner filter, refer to the page 6-15.

**CAUTION:**

- o **Replace the filter every 12,000 miles (20,000 km) or once a year. If the car is being driven in severe conditions such as dusty, rough roads, more frequent air conditioner filter inspections and changes are required.**
- o **When the air flow rate is decreased, it must be checked at an authorized Hyundai dealer.**
- o **If your vehicle is not equipped with this filter, it can be installed by your dealer. Check with your dealer for details.**

B740D01Y-AAT

**Operation Tips**

- o If the interior of the car is hot when you first get in, open the windows for a few minutes to expel the hot air.
- o When you are using the air conditioning system, keep all windows closed to keep hot air out.
- o When moving slowly, as in heavy traffic, shift to a lower gear. This increases engine speed, which in turn increases the speed of the air conditioning compressor.
- o On steep grades, turn the air conditioning off to avoid the possibility of the engine overheating.
- o During winter months or in periods when the air conditioning is not used regularly, run the air conditioning once every month for a few minutes. This will help circulate the lubricants and keep your system in peak operating condition.

## STEREO SOUND SYSTEM

B750A02A-AAT

## How Car Audio Works

FM reception

B750A01L

AM and FM radio signals are broadcast from transmitter towers located around your city. They are intercepted by the radio antenna on your car. This signal is then received by the radio and sent to your car speakers.

When a strong radio signal has reached your vehicle, the precise engineering of your audio system ensures the best possible quality reproduction. However, in some cases the signal coming to your vehicle may not be strong and clear. This can be due to factors such as the distance from the radio station, closeness of other strong radio stations or the presence of buildings, bridges or other large obstructions in the area.

B750A02L

AM broadcasts can be received at greater distances than FM broadcasts. This is because AM radio waves are transmitted at low frequencies. These long, low frequency radio waves can follow the curvature of the earth rather than travelling straight out into the atmosphere. In addition, they curve around obstructions so that they can provide better signal coverage.

B750A03L

FM broadcasts are transmitted at high frequencies and do not bend to follow the earth's surface. Because of this, FM broadcasts generally begin to fade at short distances from the station. Also, FM signals are easily affected by buildings, mountains, or other obstructions. These can result in certain listening conditions which might lead you to believe a problem exists with your radio. The following conditions are normal and do not indicate radio trouble:

- o Fading - As your car moves away from the radio station, the signal will weaken and sound will begin to fade. When this occurs, we suggest that you select another stronger station.
- o Flutter/Static - Weak FM signals or large obstructions between the transmitter and your radio can disturb the signal causing static or fluttering noises to occur. Reducing the treble level may lessen this effect until the disturbance clears.

- o Station Swapping - As an FM signal weakens, another more powerful signal near the same frequency may begin to play. This is because your radio is designed to lock onto the clearest signal. If this occurs, select another station with a stronger signal.
- o Multi-Path Cancellation - Radio signals being received from several directions can cause distortion or fluttering. This can be caused by a direct and reflected signal from the same station, or by signals from two stations with close frequencies. If this occurs, select another station until the condition has passed.

B750B01L-AAT

### Using a cellular phone or a two-way radio

When a cellular phone is used inside the vehicle, noise may be produced from the audio equipment. This does not mean that something is wrong with the audio equipment. In such a case, use the cellular phone at a place as far as possible from the audio equipment.

B940G01L-GAT

**STEREO RADIO OPERATION (H940A) (If Installed)**

B940G01L-1

B940H02L-AAT

## 1. POWER ON-OFF/VOLUME CONTROL KNOB

The radio unit may be operated when the ignition key is in the "ACC" or "ON" position. Press the button to switch the power on. The display shows the radio frequency in the radio mode, the tape direction indicator in the tape mode, or CD track either in the CD mode or CD AUTO CHANGER mode. To switch the power off, press the button again.

### VOLUME Control

Rotate the knob clockwise to increase the volume and turn the knob counterclockwise to reduce the volume.

## 2. BASS/BALANCE Control BASS Control Knob

Press the control knob to pop the knob out. To increase the bass, rotate the knob clockwise, while to decrease the bass, rotate the knob counterclockwise.

## BALANCE Control

Pull the Bass control knob out further. Rotate the knob clockwise to emphasize right speaker sound (left speaker sound will be attenuated). When the control knob is turned counter clockwise, left speaker sound will be emphasized (right speaker sound will be attenuated).

## 3. TREBLE/FAD Knob TREBLE Control Knob

Press the control knob to pop the knob out and turn to the left or right for the desired treble tone.

### FAD (Fader Control) Knob

Pull the Treble control knob out further. Turn the control knob clockwise to emphasize rear speaker sound (front speaker sound will be attenuated). When the control knob is turned counterclockwise, front speaker sound will be emphasized (rear speaker sound will be attenuated).

## 4. TUNE (Manual) Select Button

Press the (+) side or (-) side to increase or to decrease the frequency. With the button held down for 0.5 sec. or more, the frequency selection will increase or decrease rapidly.

## SEEK Operation (Automatic Channel Selection)

Press the TUNE select button 1 sec. or more. When the (+) side is pressed, the unit will automatically tune to the next higher frequency and when the (-) side is pressed, it will automatically tune to the next lower frequency.

## 5. PRESET STATION Select Buttons

Six (6) stations for AM, FM and FM2 respectively can be preset in the electronic memory circuit.

## HOW TO PRESET STATIONS

Six AM and twelve FM stations may be programmed into the memory of the radio. Then, by simply pressing the band select button and/or one of the six station select buttons, you may recall any of these stations instantly. To program the stations, follow these steps:

- o Press band selector to set the band for AM, FM and FM2.
- o Select the desired station to be stored by seek, scan or manual tuning.
- o Determine the preset station select button you wish to use to access that station.
- o Press the station select button for more than two seconds. A select button indicator will show in the display indicating which select button you have depressed. The frequency display will flash after it has been stored into the memory. You should then release the button, and proceed to program the next desired station. A total of 18 stations can be programmed by selecting one AM and two FM station per button.
- o When completed, any preset station may be recalled by selecting AM, FM or FM2 band and the appropriate station button.

## 6. BAND Selector

Pressing the button changes the AM, FM1 and FM2 bands. The mode selected is shown on the display.

## 7. EQ Button

Press the EQ button to select the CLASSIC, JAZZ, ROCK and DEFEAT MODE for the desired tone quality. Each press of the button changes the display as follows;

CLASSIC → JAZZ → ROCK → DEFEAT  

## 8. Best Station Memory Button (BSM) (If installed)

When the BSM button is pressed for two seconds or longer, the six channels from the highest field intensity are selected next and stored in memory. The stations selected are stored in the sequence frequency from the first preset key.

## 9. SCAN Button (If installed)

When the scan button is pressed, the frequency will increase and the receivable stations will be tuned in one after another, receiving each station for 5 seconds. To stop scanning, press the scan button again.

### CAUTION:

- o Do not place beverages close to the audio system. The audio system mechanism may be damaged if you spill them.
- o Do not impact on the audio system, or the audio system mechanism could be damaged.

B940I01L-GAT

**CASSETTE TAPE PLAYER OPERATION (H940A) (If Installed)**

B940J01L-GAT

### 1. FF/REW Button

- o Fast forward tape winding starts when the FF button is pressed during PLAY or REW mode.
- o PLAY starts when the FF button is pressed again during FF mode.
- o Tape rewinding starts when REW button is pressed during PLAY or FF mode.
- o PLAY starts when REW button pressed again during REW mode.

### 2. AUTO MUSIC SELECT Button

Press the button to find the starting point of each song in a prerecorded music tape. The quiet space between songs (must have at least a 4 sec. gap) can be identified by the AUTO MUSIC SELECT button.

- o Pressing the ►► will play the beginning of the next music segment.
- o Pressing the ◀◀ will start replay at the beginning of the music just listened to.
- o To stop FF or REW action, press the button again.

### 3. TAPE PROGRAM Button

This allows you to play the reverse side of the tape by merely pressing the program button. An arrow will appear in the display to show tape direction.

### 4. EJECT button

- o When the EJECT button is pressed with a cassette loaded, the cassette will eject.
- o When the EJECT button is pressed during FF/REW mode, the cassette will eject.

### 5. EQ Button

Press the EQ button to select the CLASSIC, JAZZ, ROCK and DEFEAT MODE for the desired tone quality. Each press of the button changes the display as follows;

CLASSIC → JAZZ → ROCK → DEFEAT  

### 6. DOLBY Button

If you get background noise during tape PLAY, you can reduce this considerably by merely pressing the DOLBY button. If you want to cancel the DOLBY feature, press the button again.

#### CAUTION:

- o Do not insert anything like coins into the player slot as damage to the unit may occur.
- o Do not place beverages close to the audio system. The playback mechanism may be damaged if you spill them.
- o Do not impact on the audio system, or the playback mechanism could be damaged.

B940K01L-GAT

**COMPACT DISC PLAYER OPERATION (H940A) (If Installed)**

B940L02L-GAT

## 1. Playing CD

- o Insert the CD with the label facing upward.
- o Insert the CD to start CD playback, during radio operation or cassette tape playing.
- o When a disc is in the CD deck, if you press the CD button the CD player will begin playing even if the radio or cassette player is being used.
- o The CD player can be used when the ignition switch is in either the "ON" or "ACC" position.

## 2. FF/REW

While the disc is playing, if you hold down the FF button continuously, the selected track is advanced. Holding down the REW button continuously moves the selected track back.

## 3. TRACK UP/DOWN

- o The desired track on the disc currently being played can be selected using the track number.
- o Press **▶▶** once to skip forward to the beginning of the next track.
- o Press **◀◀** once to skip back to the beginning of the track.

## 4. SCAN (If installed)

- o Press the SCAN button to playback the first 10 seconds of each track.
- o Press the SCAN button again within 10 sec. when you have reached the desired track.

## 5. REPEAT

- o To repeat the track you are currently listening to, press the RPT button. To cancel, press again.
- o If you do not release RPT operation after all the tracks are played back, the unit will play back again from the first track.

## 6. EQ Button

Press the EQ button to select the CLASSIC, JAZZ, ROCK and DEFEAT MODE for the desired tone quality. Each press of the button changes the display as follows;

CLASSIC → JAZZ → ROCK → DEFEAT  

## NOTE:

- o To assure proper operation of the unit, keep the vehicle interior temperature within a normal range by using the vehicle's air conditioning or heating system.
- o When replacing the fuse, replace it with a fuse having the correct capacity.
- o The preset station frequencies are all erased when the car battery is disconnected. Therefore, all data will have to be set again if this should occur.
- o Do not add any oil to the rotating parts. Keep magnets, screwdrivers and other metallic objects away from the tape mechanism and head.
- o This equipment is designed to be used only in a 12 volt DC battery system with negative ground.
- o This unit is made of precision parts. Do not attempt to disassemble or adjust any parts.
- o When driving your vehicle, be sure to keep the volume of the unit set low enough to allow you to hear sounds coming from the outside.
- o Do not expose this equipment (including the speakers and tape) to water or excessive moisture.

**CAUTION:**

- o Do not insert warped or poor quality discs into the CD player as damage to the unit may occur.
- o Do not insert anything like coins into the player slot as damage to the unit may occur.
- o Do not place beverages close to the audio system. The playback mechanism may be damaged if you spill them.
- o Do not impact on the audio system, or the playback mechanism could be damaged.
- o Driving on the off-roads or other vibrations may skip your compact disc. Do not use the audio system on off-roads as the discs could be scratched and damaged.
- o Do not grip or pull out the disc with your hand while the disc is being pulled into the unit by the self loading mechanism. These can cause poor disc scratching to occur or trouble in the compact disc player.
- o Avoid using CD-Recordable or CD-Rewritable as the player could not be operated in recording way of the CD maker. When using the compact disc player, genuine CDs are recommended.

B940M01L-GAT

**CD AUTO CHANGER (H940A) (If Installed)**

B940G01L-1

B940N02L-GAT

The CD auto changer connected with audio system is located in the left side of trunk.

- o To use the CD auto changer
  1. Open the sliding lid of the CD auto changer.
  2. To eject the compact disc magazine, press the EJECT button located inside the CD auto changer.
  3. Insert the discs into the magazine.
  4. Push the magazine into the CD auto changer and close the sliding lid.
  
- o The CD auto changer can be used when the ignition switch is in either "ON" or "ACC" position.

### 1. CDCHG Button

When the CD changer have discs inserted in the magazine, if you press the CDCHG button, the CD changer can be used even if the radio or cassette player is being used. The Hyundai CD changer can hold up to eight discs. The disc number will be lit, and the track number, and elapsed time will be displayed.

### 2. FF/REW

While the disc is playing, if you hold down the FF button continuously, the selected track is advanced. Holding down the REW button continuously moves the selected track back.

### 3. TRACK UP/DOWN

- o The desired track on the disc currently being played can be selected using the track number.
- o Press ►| once to skip forward to the beginning of the next track.
- o Press |◀ once to skip back to the beginning of the track.

### 4. DISC Select Button

To select the CD you want, push "DISC +" or "DISC -" to change the disc number

### 5. SCAN (If installed)

- o Press the SCAN button to playback the first 10 seconds of each track.
- o Press the SCAN button again within 10 sec. for the desired track.

### 6. REPEAT

- o To repeat the track you are listening to, press the RPT button. To cancel , press again.
- o If you do not release RPT operation after all the tracks are played back, the unit will play back again from the first track.

### 7. EQ Button

Press the EQ button to select the CLASSIC, JAZZ, ROCK and DEFEAT MODE for the desired tone quality. Each press of the button changes the display as follows;

#### NOTE:

- o When replacing the fuse, replace it with a fuse having the correct capacity.
- o This equipment is designed to be used only in a 12 volt DC battery system with negative ground.
- o This unit is made of precision parts. Do not attempt to disassemble or adjust any parts.
- o When driving your vehicle, be sure to keep the volume of the unit set low enough to allow you to hear sounds coming from the outside.

**CAUTION:**

- o Do not insert warped or poor quality discs into the CD changer as damage to the unit may occur.
- o Do not insert anything like coins into the changer slot as damage to the unit may occur.
- o Do not place beverages close to the audio system. The playback mechanism may be damaged if you spill them.
- o Do not impact on the audio system, or the playback mechanism could be damaged.
- o Driving on the off-roads or other vibrations may skip your compact disc. Do not use the audio system on off-roads as the discs could be scratched and damaged.
- o Do not grip or pull out the disc with your hand while the disc is being pulled into the unit by the self loading mechanism. These can cause poor disc scratching to occur or trouble in the compact disc player.
- o Avoid using CD-Recordable or CD-Rewritable as the player could not be operated in recording way of the CD maker. When using the compact disc player, genuine CDs are recommended.

B940001L-AAT

### STEREO RADIO OPERATION (H940C) (If Installed)

B940P02L-AAT

## 1. POWER ON-OFF/VOLUME CONTROL KNOB

The radio unit may be operated when the ignition key is in the "ACC" or "ON" position. Press the button to switch the power on. The display shows the radio frequency in the radio mode, CD track either in the CD mode or CD AUTO CHANGER mode. To switch the power off, press the button again.

### VOLUME Control

Rotate the knob clockwise to increase the volume and turn the knob counterclockwise to reduce the volume.

## 2. BASS/BALANCE Control BASS Control Knob

Press to pop the knob out. To increase the bass, rotate the knob clockwise, while to decrease the bass, rotate the knob counterclockwise.

### BALANCE Control

Further pull the popped-up knob. Rotate the knob clockwise to emphasize right speaker sound (left speaker sound will be attenuated). When the control knob is turned counterclockwise, left speaker sound will be emphasized (right speaker sound will be attenuated).

## 3. TREBLE/FAD Knob TREBLE Control Knob

Press to pop the knob out and turn to the left or right for the desired treble tone.

### FAD (Fader Control) Knob

Further pull the popped-up knob. Turn the control knob clockwise to emphasize rear speaker sound (front speaker sound will be attenuated). When the control knob is turned counterclockwise, front speaker sound will be emphasized (rear speaker sound will be attenuated).

## 4. TUNE / SEEK Select Button TUNE (Manual) Select Button

Press the (+) side or (-) side to increase or to decrease the frequency. With the button held down for 0.5 sec. or more, the frequency selection will increase or decrease rapidly.

### SEEK Operation (Automatic Channel Selection)

Press the TUNE select button 1 sec. or more. When the (+) side is pressed, the unit will automatically tune to the next higher frequency and when the (-) side is pressed, it will automatically tune to the next lower frequency.

## 5. PRESET STATION Select Buttons

Six (6) stations for AM, FM and FM2 respectively can be preset in the electronic memory circuit.

### HOW TO PRESET STATIONS

Six AM and twelve FM stations may be programmed into the memory of the radio. Then, by simply pressing the band select button and/or one of the six station select buttons, you may recall any of these stations instantly. To program the stations, follow these steps:

- o Press band selector to set the band for AM, FM and FM2.
- o Select the desired station to be stored by seek, scan or manual tuning.
- o Determine the preset station select button you wish to use to access that station.
- o Press the station select button for more than two seconds. A select button indicator will show in the display indicating which select button you have depressed. The frequency display will flash after it has been stored into the memory. You should then release the button, and proceed to program the next desired station. A total of 18 stations can be programmed by selecting one AM and two FM station per button.
- o When completed, any preset station may be recalled by selecting AM, FM or FM2 band and the appropriate station button.

## 6. BAND Selector

Pressing the button changes the AM, FM1 and FM2 bands. The mode selected is shown on the display.

## 7. EQ Button

Press the EQ button to select the CLASSIC, JAZZ, ROCK and DEFEAT MODE for the desired tone quality. Each press of the button changes the display as follows;

CLASSIC → JAZZ → ROCK → DEFEAT  
↑—————↓

### CAUTION:

- o Do not place beverages close to the audio system. The audio system mechanism may be damaged if you spill them.
- o Do not impact on the audio system, or the audio system mechanism could be damaged.

B940Q01L-AAT

**COMPACT DISC PLAYER OPERATION (H940C) (If Installed)**

B940R02L-AAT

## 1. Playing CD

- o Insert the CD with the label facing upward.
- o Insert the CD to start CD playback, during radio operation or cassette tape playing.
- o When a disc is in the CD deck, if you press the CD button, the CD player will begin playing even if the radio or cassette player is being used.
- o The CD player can be used when the ignition switch is in either the "ON" or "ACC" position.

## 2. FF/REW

While the disc is playing, if you hold down the FF button continuously, the selected track is advanced. Holding down the REW button continuously moves the selected track back.

## 3. TRACK UP/DOWN

- o The desired track on the disc currently being played can be selected using the track number.
- o Press **▶▶** once to skip forward to the beginning of the next track.
- o Press **◀◀** once to skip back to the beginning of the track.

## 4. REPEAT

- o To repeat the track you are currently listening to, press the RPT button. To cancel, press again.
- o If you do not release RPT operation after all the tracks are played back, the unit will play back again from the first track.

## 5. EQ Button

Press the EQ button to select the CLASSIC, JAZZ, ROCK and DEFEAT MODE for the desired tone quality. Each press of the button changes the display as follows;

CLASSIC → JAZZ → ROCK → DEFEAT  

## 6. EJECT Button

When the EJECT button is pressed with a CD loaded, CD will eject.

## NOTE:

- o To assure proper operation of the unit, keep the vehicle interior temperature within a normal range by using the vehicle's air conditioning or heating system.
- o When replacing the fuse, replace it with a fuse having the correct capacity.
- o The preset station frequencies are all erased when the car battery is disconnected. Therefore, all data will have to be set again if this should occur.
- o Do not add any oil to the rotating parts. Keep magnets, screwdrivers and other metallic objects away from the tape mechanism and head.
- o This equipment is designed to be used only in a 12 volt DC battery system with negative ground.
- o This unit is made of precision parts. Do not attempt to disassemble or adjust any parts.
- o When driving your vehicle, be sure to keep the volume of the unit set low enough to allow you to hear sounds coming from the outside.
- o Do not expose this equipment (including the speakers and tape) to water or excessive moisture.

**CAUTION:**

- o Do not insert warped or poor quality discs into the CD player as damage to the unit may occur.
- o Do not insert anything like coins into the player slot as damage to the unit may occur.
- o Do not place beverages close to the audio system. The playback mechanism may be damaged if you spill them.
- o Do not impact on the audio system, or the playback mechanism could be damaged.
- o Driving on the off-roads or other vibrations may skip your compact disc. Do not use the audio system on off-roads as the discs could be scratched and damaged.
- o Do not grip or pull out the disc with your hand while the disc is being pulled into the unit by the self loading mechanism. These can cause poor disc scratching to occur or trouble in the compact disc player.
- o Avoid using CD-Recordable or CD-Rewritable as the player could not be operated in recording way of the CD maker. When using the compact disc player, genuine CDs are recommended.

B940S01L-AAT

### CD AUTO CHANGER (H940C) (If Installed)

B940T02L-AAT

The CD auto changer is located in the left side of the trunk.

- o To use the CD auto changer
  1. Open the sliding lid of the CD auto changer.
  2. To eject the compact disc magazine, press the EJECT button located in the CD auto changer.
  3. Insert the discs into the magazine.
  4. Push the magazine into the CD auto changer and close the sliding lid.
- o The CD auto changer can be used when the ignition switch is in either "ON" or "ACC" position.

## 1. CDCHG Button

When the CD changer magazine contains discs, press the CDCHG button and the CD changer can be used even if the radio is being used. The Hyundai CD changer can hold up to eight discs. The disc number will be lit, and the track number, and elapsed time will be displayed.

## 2. FF/REW

While the disc is playing, if you hold down the FF button continuously, the selected track is advanced. Holding down the REW button continuously moves the selected track back.

## 3. TRACK UP/DOWN

- o The desired track on the disc currently being played can be selected using the track number.
- o Press ►► once to skip forward to the beginning of the next track.
- o Press ◀◀ once to skip back to the beginning of the track.

## 4. DISC Select Button

To select the CD you want, push "DISC +" or "DISC-" to change the disc number.

## 5. REPEAT

- o To repeat the track you are listening to, press the RPT button. To cancel, press again.
- o If you do not release RPT operation after all the tracks are played back, the unit will play back again from the first track.

## 6. EQ Button

Press the EQ button to select the CLASSIC, JAZZ, ROCK and DEFEAT MODE for the desired tone quality. Each press of the button changes the display as follows;

CLASSIC → JAZZ → ROCK → DEFEAT  

### NOTE:

- o When replacing the fuse, replace it with a fuse having the correct capacity.
- o This equipment is designed to be used only in a 12 volt DC battery system with negative ground.
- o This unit is made of precision parts. Do not attempt to disassemble or adjust any parts.
- o When driving your vehicle, be sure to keep the volume of the unit set low enough to allow you to hear sounds coming from the outside.

**CAUTION:**

- o Do not insert warped or poor quality discs into the CD changer as damage to the unit may occur.
- o Do not insert anything like coins into the changer slot as damage to the unit may occur.
- o Do not place beverages close to the audio system. The playback mechanism may be damaged if you spill them.
- o Do not impact on the audio system, or the playback mechanism could be damaged.
- o Driving on the off-roads or other vibrations may skip your compact disc. Do not use the audio system on off-roads as the discs could be scratched and damaged.
- o Do not grip or pull out the disc with your hand while the disc is being pulled into the unit by the self loading mechanism. These can cause poor disc scratching to occur or trouble in the compact disc player.
- o Avoid using CD-Recordable or CD-Rewritable as the player could not be operated in recording way of the CD maker. When using the compact disc player, genuine CDs are recommended.

## AUDIO FAULT CODE

B890A01Y-AAT

If you see any error indication in the display while using the system in the CD or Tape mode, find the cause in the chart below.  
If you cannot clear the error indication, take the car to your Hyundai dealer.

| INDICATION | CAUSE   | SOLUTION  |
|------------|---|---|
| Er2        | CD DECK MECHANICAL ERROR<br>(EJECT ERROR, LOADING ERROR)  | After resetting the audio system, push the eject button.<br>If disc is not ejected, consult your hyundai dealer.                  |
| Er3        | FOCUS ERROR<br>DATA READ ERROR                            | Make sure the disc is not scratched or damaged.<br>Press the eject button and pull out the disc.<br>Then insert a normal cd disc. |
| Er6        | DISC ERROR  | Check if the disc is inserted correctly in the cd player.<br>Make sure the disc is not scratched or damaged.                      |
| Er8        | TAPE DECK ERROR<br>TAPE EJECT ERROR                       | After resetting the audio system, push the eject button.<br>If tape does not eject, consult your Hyundai dealer.                  |
| HHH        | TEMPERATURE IS TOO HIGH                                   | Fault code will reset automatically when the temperature returns to normal.   |
| no CD      | NO DISC IN MAGAZINE<br>NO CD MAGAZINE IN THE AUTO CHANGER | Insert disc in magazine or insert cd magazine in the auto changer.  |

## CARE OF DISC

B850A02F-AAT

## Proper Handling

B850A01L

Handle your disc as shown. Do not drop the disc. Hold the disc so you will not leave fingerprints on the surface. If the surface is scratched, it may cause the pickup to skip signal tracks. Do not affix tape, paper, or gummed labels on the disc. Do not write on the disc.

## Damaged Disc

Do not attempt to play damaged, warped or cracked discs. These could severely damage the playback mechanism.

## Storage

When not in use, place your discs in their individual case and store them in a cool place away from the sun, heat, and dust. Do not grip or pull out the disc with your hand while the disc is being pulled into the unit by the self loading mechanism.

## Keep Your Discs Clean

B850A02L

Fingerprints, dust, or soil on the surface of a disc could cause the pickup to skip signal tracks. Wipe the surface clean with a clean soft cloth. If the surface is heavily soiled, dampen a clean soft cloth in a solution of mild neutral detergent to wipe it clean.

## CARE OF CASSETTE TAPES

B860A01A-AAT

B860A01L

Proper care of your cassette tapes will extend the tape life and increase your listening enjoyment. Always protect your tapes and cassette cases from direct sunlight, severely cold and dusty conditions. When not in use, cassettes should always be stored in the original protective cassette case. When the vehicle is very hot or cold, allow the interior temperature to become more comfortable before listening to your cassettes.

- o Never leave a cassette inserted in the player when not being played. This could damage the tape player unit and the cassette tape.
- o We strongly recommend against the use of tapes longer than C-60 (60 minutes total). Tapes such as C-120 or C-180 are very thin and do not perform as well in the automotive environment.

- o Be sure that the cassette label is not loose or peeling off or tape ejection may be difficult.
- o Never touch or soil the actual audio tape surfaces.
- o Keep all magnetized objects, such as electric motors, speakers or transformers away from your cassette tapes and tape player unit.

- o Store cassettes in a cool, dry place with the open side facing down to prevent dust from setting in the cassette body.
- o Avoid repeated fast reverse usage to replay one given tune or tape section. This can cause poor tape winding to occur, and eventually cause excessive internal drag and poor audio quality in the cassette. If this occurs, it can sometimes be corrected by fast winding the tape from end to end several times. If this does not correct the problem, do not continue to use the tape in your vehicle.

- o The playback head, capstan and pinch rollers will develop a coating of tape residue that can result in deterioration of sound quality, such as a wavering sound. They should be cleaned monthly using a commercially available head cleaning tape or special solution available from audio specialty shops. Follow the supplier's directions carefully and never oil any part of the tape player unit.
- o Always be sure that the tape is tightly wound on its reel before inserting in the player. Rotate a pencil in the drive sprockets to wind up any slack.

## GLASS ANTENNA

B870D02Y-GAT

When the radio power switch is turned on while the ignition key is in either the "ON" or "ACC" position, your car will receive both AM and FM broadcast signals through the antenna in the rear window glass.

**CAUTION:**

- o Do not clean the inner side of the rear window glass with an abrasive type of glass cleaner or use a scraper to remove foreign deposits from the inner surface of the glass as this may cause damage to the antenna elements.
- o Avoid adding metallic coating (Some aftermarket window tinting has metallic contents). These can disturb receiving AM and FM broadcast signals.

## DRIVING YOUR HYUNDAI

**WARNING: ENGINE EXHAUST CAN BE DANGEROUS!**

C010A02L-AAT

Engine exhaust fumes can be extremely dangerous. If, at any time, you smell exhaust fumes inside the vehicle, open the windows immediately.

**o Do not inhale exhaust fumes.**

Exhaust fumes contain carbon monoxide, a colorless, odorless gas that can cause unconsciousness and death by asphyxiation.

**o Be sure the exhaust system does not leak.**

The exhaust system should be checked whenever the vehicle is raised to change the oil or for any other purpose. If you hear a change in the sound of the exhaust or if you drive over something that strikes the underneath side of the car, have the exhaust system checked as soon as possible by your Hyundai dealer.

**o Do not run the engine in an enclosed area.**

Letting the engine idle in your garage, even with the garage door open, is a hazardous practice. Never run the engine in your garage any longer than it takes to start the engine and back the car out.

**o Avoid idling the engine for prolonged periods with people inside the car.**

If it is necessary to idle the engine for a prolonged period with people inside the car, be sure to do so only in an open area with the air intake set at "Fresh" and fan operating at one of the higher speeds so fresh air is drawn into the interior.

If you must drive with the trunk open because you are carrying objects that make this necessary:

1. Close all windows.
2. Open side vents.
3. Set the air intake control at "Fresh", the air flow control at "Floor" or "Face" and the fan at one of the higher speeds.

To assure proper operation of the ventilation system, be sure the ventilation air intakes located just in front of the windshield are kept clear of snow, ice, leaves or other obstructions.

**PROPOSITION 65 WARNING:**

Engine exhaust and a wide variety of automobile components and parts, including components found in the interior furnishings in a vehicle, contain or emit chemicals known to the State of California to cause cancer and birth defects and reproductive harm. In addition, certain fluids contained in vehicles and certain products of component wear contain or emit chemicals known to the State of California to cause cancer and birth defects or other reproductive harm.

## BEFORE STARTING THE ENGINE

C020A01A-AAT

Before you start the engine, you should always:

1. Look around the vehicle to be sure there are no flat tires, puddles of oil, water or other indications of possible trouble.
2. After entering the car, check to be sure the parking brake is engaged.
3. Check that all windows, and lights are clean.
4. Check that the interior and exterior mirrors are clean and in position.
5. Check your seat, seatback and headrest to be sure they are in their proper positions.
6. Lock all the doors.
7. Fasten your seat belt and be sure that all other occupants have fastened theirs.
8. Turn off all lights and accessories that are not needed.
9. When you turn the ignition switch to "ON", check that all appropriate warning lights are operating and that you have sufficient fuel.
10. Check the operation of warning lights and all bulbs when key is in the "ON" position.

## COMBINATION IGNITION SWITCH

C030A01L-AAT

## To Start the Engine

- o Place the shift lever in "P" (park) and depress the brake pedal fully.
- o To start the engine, insert the ignition key and turn it to the "START" position. Release it as soon as the engine starts. Do not hold the key in the "START" position for more than 15 seconds.

## NOTE:

- o For safety, the engine will not start if the shift lever is not in "P" or "N" Position.
- o The ignition key cannot be turned from "ACC" position to "LOCK" position unless the shift lever is in the "P" (Park) position or the negative battery terminal is disconnected from the battery. To remove the key, always confirm that the shift lever is securely positioned in "P" (Park).
- o For additional information about starting, see page 2-4.

## KEY POSITIONS

C040A01A-AAT

## o "START"

The engine is started in this position. It will crank until you release the key.

## NOTE:

Do not hold the key in the "START" position for more than 15 seconds.

### o "ON"

When the key is in the "ON" position, the ignition is on and all accessories may be turned on. If the engine is not running, the key should not be left in the "ON" position. This will discharge the battery and may also damage the ignition system.

### o "ACC"

With the key in the "ACC" position, some electrical accessories (radio, etc.) may be operated.

### o "LOCK"

The key can be removed or inserted in this position.

To protect against theft, the steering wheel locks by removing the key.

### NOTE:

To unlock the steering wheel, insert the key, and then turn the steering wheel and key simultaneously.

C070C02A-AAT

### To remove the ignition key

1. Turn the ignition key to the "ACC" position.
2. Turn the ignition key counterclockwise from the "ACC" position to the "LOCK" position.
3. The key can be removed in the "LOCK" position.

## STARTING

C050A01A-AAT

### WARNING:

Never run the engine in a closed or poorly ventilated area any longer than is needed to move your car in or out of the area. The carbon monoxide gas emitted is odorless and can cause serious injury or death.

## AUTOMATIC TRANSAXLE

C050B01L-AAT

**Normal Conditions:**

The Starting Procedure:

1. Insert key, and fasten the seat belt.
2. Depress the brake pedal fully and place the selector lever in "P" (park) position.
3. After turning the ignition key to the "ON" position, make certain all warning lights and gauges are functioning properly before starting the engine.
4. Turn the ignition key to the "Start" position and release it when the engine starts. After the engine has started, allow the engine to run for 10 to 20 seconds prior to placing the vehicle in gear.

The starter should not be operated for more than 15 seconds at a time. Wait 15-30 seconds between starting attempts to protect the starter from overheating.

C090A02L-AAT

HXG065

The highly efficient Hyundai automatic transaxle has five forward speeds and one reverse speed. The individual speeds are selected automatically, depending on the position of the speed selector lever. The selector lever has 2 gates; the main gate and the manual gate.

**NOTE:**

For information on manual gate operation, refer to "Sports Mode".

In the main gate, the selector lever has 5 positions, and is equipped with a button to avoid inadvertent wrong selection.

**NOTE:**

-  Depress the brake pedal and push the button when shifting.
-  Push the button when shifting.
-  The selector lever can be shifted freely.

The first few shifts on a new vehicle, or if the battery has been disconnected may be somewhat abrupt. This is a normal condition, and the shifting sequence will adjust after shifts are cycled a few times by the T.C.M (Transaxle Control Module).

C090A02L

**CAUTION:**

Never shift into "R" or "P" position while the vehicle is moving.

The indicator lights in the instrument cluster indicate the selector lever position when the ignition is switched "ON". During sports mode operation, green lights indicate the gear currently in use.

C090B01A-AAT

**The function of each position is as follows:**

**o P (Park):**

Use to hold the vehicle in place when parked or while starting the engine. Whenever parking the car, apply the parking brake and shift the selector lever to the "P" (Park) position.

**CAUTION:**

Never place the selector lever in the "P" (Park) position unless the vehicle is fully stopped. Failure to observe this caution will cause severe damage to the transaxle.

C090C01A-AAT

**o R (Reverse):**

Use for backing up the vehicle. Bring the car to a complete stop before shifting the selector lever to "R" position.

C090D02A-AAT

**o N (Neutral):**

In the "N" position, the transaxle is in neutral, which means that no gears are engaged. The engine can be started with the shift lever in "N" position, although this is not recommended except if the engine stalls while the car is moving.

C090E01L-AAT

**o D (Drive):**

Use for normal driving. This position is used for most city and highway driving, for starting from a full stop to maximum speed. The transaxle will automatically shift through a five gear sequence.

C090F02L-AAT

**Sports Mode**

HXG200

Whether the vehicle is stationary or in motion, sports mode is selected by pushing the selector lever from the "D" position into the manual gate. To return to "D" range operation, push the selector lever back into the main gate. In sports mode, moving the selector lever backwards and forwards can make rapid gearshifts simple. In contrast to a manual transaxle, the sports mode allows gearshifts with the accelerator pedal depressed.

**UP (+)** : Push the lever forward once to shift up one gear.

**DOWN (-)** : Pull the lever backward once to shift down one gear.

**CAUTION:**

- o In sports mode the driver must execute shifts in accordance with prevailing road conditions, taking care to keep the engine speed below the red zone. For the engine protection, upward shifts are made automatically when the engine rpm reaches the red zone.
- o By rapidly moving the selector lever backwards (-) twice, it is possible to skip one gear, i.e., 3rd to 1st, 4th to 2nd or 5th to 3rd. Since sudden engine braking and/or rapid acceleration can cause a loss of traction, however, downshifts must be made carefully in accordance with the vehicle's speed.

**NOTE:**

- o In sports mode, only the five forward gears can be selected. To reverse or park the vehicle, move the selector lever to the "R" or "P" position as required.
- o In sports mode, downward shifts are made automatically when the vehicle slows down. When the vehicle stops, 1st gear is automatically selected.
- o To maintain the required levels of vehicle performance and safety, the system may not execute certain gearshifts when the selector lever is operated.

- o Before driving away from a stop on a slippery road, push the selector lever forward into the +(UP) position. This causes the transaxle to shift into 2nd gear which is better for smooth driving away on a slippery road. Push the selector lever to the -(DOWN) side to shift back to 1st gear.

C090H01L-GAT

**NOTE:**

- o For smooth and safe operation, depress the brake pedal when shifting from "Neutral" position or "Park" position to a forward or reverse gear.
- o The ignition key must be in the "ON" position and the brake pedal fully depressed in order to move the shift lever from the "P" (Park) position to any of the other positions.
- o It is always possible to shift from "R", "N", "D" position to "P" position. The vehicle must be fully stopped to avoid transaxle damage.

C090I02L-GAT

**CAUTION:**

- o Shift into "R" and "P" position only when the vehicle has completely stopped.
- o Do not accelerate the engine in reverse or any of the forward positions with the brakes applied.
- o Always apply the footbrake when shifting from "P" or "N", to "R" or "D" position.
- o Do not use the "P" (Park) position in place of the parking brake. Always set the parking brake, shift the transaxle into "P" (Park) position and turn off the ignition when you leave the vehicle, even momentarily. Never leave the vehicle unattended while the engine is running.
- o Check the automatic transaxle fluid level regularly, and add fluid as necessary.
- o See the maintenance schedule for the proper fluid recommendation.

## GOOD DRIVING PRACTICES

C090N03Y-AAT

- o Never move the gear selector lever from "P" or "N" to any other position with the accelerator pedal depressed.
- o Never move the gear selector lever into "P" when the vehicle is in motion.
- o Be sure the car is completely stopped before you attempt to shift into "R".
- o Never take the car out of gear and coast down a hill. This may be extremely hazardous. Always leave the car in gear when moving.
- o Do not "ride" the brakes. This can cause them to overheat and malfunction. Instead, when you are driving down a long hill, slow down and shift to a lower gear. When you do this, engine braking will help slow the car.
- o Slow down before shifting to a lower gear. Otherwise, the lower gear may not be engaged.
- o Always use the parking brake. Do not depend on placing the transaxle in "P" to keep the car from moving.
- o Exercise extreme caution when driving on a slippery surface. Be especially careful when braking, accelerating or shifting gears. On a slippery surface, an abrupt change in vehicle speed can cause the drive wheels to lose traction and the vehicle to go out of control.

**WARNING:**

- o **The risk of rollover is greatly increased if you lose control of your vehicle at highway speeds.**
- o **Loss of control often occurs if two or more wheels drop off the roadway and the driver oversteers to reenter the roadway.**
- o **In the event your vehicle leaves the roadway, do not steer sharply. Instead, slow down before pulling back into the travel lanes.**
- o **In a collision crash, an unbelted person is significantly more likely to die than a person wearing a seatbelt.**
- o **Never exceed posted speed limits.**
- o **Excessive depressing of the accelerator pedal in slippery driving conditions such as pulling out of deep snow or mud may cause severe damage to the transaxle. Rocking the vehicle is not recommended. Rather, use an appropriate towing method.**

## ANTI-LOCK BRAKE SYSTEM

C120A02A-AAT

**(If Installed)**

The Anti-Lock Brake System (ABS) is designed to prevent wheel lock-up during sudden braking or on hazardous road surfaces. The ABS control module monitors the wheel speed and controls the pressure applied to each brake. Thus, in emergency situations or on slick roads, ABS will increase vehicle control during braking.

**NOTE:**

**During ABS operation, a pulsation may be felt in the brake pedal when the brakes are applied. Also, a noise may be heard in the engine compartment while braking. These conditions are normal and indicate that the anti-lock brake system is functioning properly.**

## TRACTION CONTROL SYSTEM (TCS)

C300A02Y-GAT  
(If Installed)

C300A02L-A

On slippery road surfaces, the traction control system (TCS) limits the drive wheels from spinning excessively, thus helping the car to accelerate. It also provides sufficient driving force and steering performance as the car turns at accelerated speeds.

### SLIP Control

Limits the drive wheels from spinning excessively during starting or while making accelerated turns on slippery roads to avoid losing the driving force of the front wheels.

### Driving hints

TCS does not actively apply brakes. Be sure to decelerate the car sufficiently before entering curves.

### CAUTION:

When the TCS indicator blinks, SLIP control has been activated. It also means that the road is slippery or your car is accelerating excessively. In this situation, gently release foot pressure from the accelerator pedal and maintain moderate speed.

### WARNING:

Traction control is only a driving aid; all normal precautions for driving in inclement weather and on slippery driving surfaces should be observed.

### WARNING:

Your ABS will not prevent accidents due to improper or dangerous driving maneuvers. Even though vehicle control is improved during emergency braking, always maintain a safe distance between you and objects ahead. Vehicle speeds should always be reduced during extreme road conditions.

The braking distance for cars equipped with an anti-lock braking system may be longer than for those without it in the following road conditions. During these conditions the vehicle should be driven at reduced speeds.

- o Rough, gravel or snow-covered roads.
- o With tire chains installed.
- o On roads where the road surface is pitted or has different surface height.

The safety features of an ABS equipped vehicle should not be tested by high speed driving or cornering. This could endanger the safety of yourself or others.

C300B01L-GAT

**TCS ON/OFF Mode**

In the TCS ON mode, the indicator in the instrument cluster will not be illuminated.

To switch the TCS OFF mode, press the TCS switch. The SLIP control will be deactivated and the TCS indicator in the instrument cluster will be illuminated.

**NOTE:**

- 1) **The TCS mode will automatically be turned ON after the engine is turned off and restarted.**
- 2) **When the traction control is operating properly, you can feel a slight pulsation in the vehicle. This is only the effect of brake control and indicates nothing unusual.**
- 3) **When the engine starts, a click is heard from the engine compartment; however, this is only the sound of traction control being checked.**
- 4) **When moving out of the mud or fresh snow, pressing the accelerator pedal may not cause the engine speed to increase due to TCS operation.**

C300D02L-GAT

**Indicators and Warning**

The indicators should illuminate when the ignition key is turned to "ON" or "START" but should go out after three seconds.

If the indicators do not illuminate, or the TCS or TCS-OFF indicator does not go out after 3 seconds, have it checked by an authorized dealer.

Should there be any unusual conditions in the device while driving, TCS-OFF indicator illuminates as a warning.

If TCS-OFF indicator illuminates, pull your car to a safe place and stop the engine. Then, start the engine again to check if the TCS-OFF indicator goes out.

If the indicator remains lit even after the engine has been started, have your car checked by an authorized Hyundai dealer.

**NOTE:**

- 1) **When the TCS-OFF indicator illuminates, traction control is automatically deactivated for safety.**
- 2) **This warning function is not provided when the driver selects the TCS-OFF mode.**

C130A01O-BAT

**GOOD BRAKING PRACTICES****WARNING:**

**Nothing should be carried on top of the shelf panel behind the rear seat. If there were an accident or a sudden stop, such objects could move forward and cause damage to the vehicle or injure the occupants.**

- o After being parked, check to be sure the parking brake is not engaged and that the parking brake indicator light is out before driving away.
- o Driving through water may get the brakes wet. They can also get wet when the car is washed. Wet brakes can be dangerous! Your car will not stop as quickly if the brakes are wet. Wet brakes may cause the car to pull to one side. To dry the brakes, apply the brakes lightly until the braking action returns to normal, taking care to keep the car under control at all times. If the braking action does not return to normal, stop as soon as it is safe to do so and call your Hyundai dealer for assistance.

- o Don't coast down hills with the car out of gear. This is extremely hazardous. Keep the car in gear at all times, use the brakes to slow down, then shift to a lower gear so that engine braking will help you maintain a safe speed.
- o Don't "ride" the brake pedal. Resting your foot on the brake pedal while driving can be dangerous because it can result in the brakes overheating and losing their effectiveness. It also increases the wear of the brake components.
- o If a tire goes flat while you are driving, apply the brakes gently and keep the car pointed straight ahead while you slow down. When you are moving slowly enough for it to be safe to do so, pull off the road and stop in a safe place.
- o Don't let your car creep forward. To avoid creeping forward, keep your foot firmly on the brake pedal when the car is stopped.
- o Use caution when parking on a hill. Engage the parking brake and place the gear selector lever in "P". If your car is facing downhill, turn the front wheels into the curb to help keep the car from rolling. If your car is facing uphill, turn the front wheels away from the curb to help keep the car from rolling. If there is no curb or if it is required by other conditions to keep the car from rolling, block the wheels.
- o Under some conditions your parking brake can freeze in the engaged position. This is most likely to happen when there is an accumulation of snow or ice around or near the rear brakes or if the brakes are wet. If there is a risk that the parking brake may freeze, apply it only temporarily while you put the gear selector lever in "P" and block the rear wheels so the car cannot roll. Then release the parking brake.
- o Do not hold the vehicle on the upgrade with the accelerator pedal. This can cause the transaxle to overheat. Always use the brake pedal or parking brake.

## C140A01A-AAT

You can save fuel and get more miles from your car if you follow these suggestions:

- o Drive smoothly. Accelerate at a moderate rate. Don't make "jack-rabbit" starts or full-throttle shifts and maintain a steady cruising speed. Don't race between stoplights. Try to adjust your speed to that of the other traffic so you don't have to change speeds unnecessarily. Avoid heavy traffic whenever possible. Always maintain a safe distance from other vehicles so you can avoid unnecessary braking. This also reduces brake wear.
- o Drive at a moderate speed. The faster you drive, the more fuel your car uses. Driving at a moderate speed, especially on the highway, is one of the most effective ways to reduce fuel consumption.
- o Don't "ride" the brake or clutch pedal. This can increase fuel consumption and also increase wear on these components. In addition, driving with your foot resting on the brake pedal may cause the brakes to overheat, which reduces their effectiveness and may lead to more serious consequences.
- o Take care of your tires. Keep them inflated to the recommended pressure. Incorrect inflation, either too much or too little, results in unnecessary tire wear. Check the tire pressures at least once a month.

## SMOOTH CORNERING

C150A01A-AAT

Avoid braking or gear changing in corners, especially when roads are wet. Ideally, corners should always be taken under gentle acceleration. If you follow these suggestions, tire wear will be held to a minimum.

- o Be sure that the wheels are aligned correctly. Improper alignment can result from hitting curbs or driving too fast over irregular surfaces. Poor alignment causes faster tire wear and may also result in other problems as well as greater fuel consumption.
- o Keep your car in good condition. For better fuel economy and reduced maintenance costs, maintain your car in accordance with the maintenance schedule in Section 5. If you drive your car in severe conditions, more frequent maintenance is required (see Section 5 for details).
- o Keep your car clean. For maximum service, your Hyundai should be kept clean and free of corrosive materials. It is especially important that mud, dirt, ice, etc. not be allowed to accumulate on the underside of the car. This extra weight can result in increased fuel consumption and also contribute to corrosion.
- o Travel lightly. Don't carry unnecessary weight in your car. Weight reduces fuel economy.
- o Don't let the engine idle longer than necessary. If you are waiting (and not in traffic), turn off your engine and restart only when you're ready to go.
- o Remember, your Hyundai does not require extended warm-up. As soon as the engine is running smoothly, you can drive away. In very cold weather, however, give your engine a slightly longer warm-up period.
- o Don't "lug" or "over-rev" the engine. Lugging is driving too slowly in too high a gear resulting in the engine bucking. If this happens, shift to a lower gear. Over-revving is racing the engine beyond its safe limit. This can be avoided by shifting at the recommended speeds.
- o Use your air conditioning sparingly. The air conditioning system is operated by engine power so your fuel economy is reduced when you use it.

## WINTER DRIVING

C160A01A-AAT

The more severe weather conditions of winter result in greater wear and other problems. To minimize the problems of winter driving, you should follow these suggestions:

C160B01A-AAT

### Snowy or Icy Conditions

To drive your vehicle in deep snow, it may be necessary to use snow tires or to install tire chains on your tires. If snow tires are needed, it is necessary to select tires equivalent in size and type of the original equipment tires. Failure to do so may adversely affect the safety and handling of your car. Furthermore, speeding, rapid acceleration, sudden brake applications, and sharp turns are potentially very hazardous practices.

During deceleration, use engine braking to the fullest extent. Sudden brake applications on snowy or icy roads may cause skids to occur. You need to keep sufficient distance between the vehicle in operation in front and your vehicle. Also, apply the brake gently. It should be noted that installing tire chains on the tire will provide a greater driving force, but will not prevent side skids.

#### NOTE:

**Tire chains are not legal in all states. Check state laws before fitting tire chains.**

C160C01A-AAT

### Use High Quality Ethylene Glycol Coolant

Your Hyundai is delivered with high quality ethylene glycol coolant in the cooling system. It is the only type of coolant that should be used because it helps prevent corrosion in the cooling system, lubricates the water pump and prevents freezing. Be sure to replace or replenish your coolant in accordance with the maintenance schedule in Section 5. Before winter, have your coolant tested to assure that its freezing point is sufficient for the temperatures anticipated during the winter.

C160D01A-AAT

### Check Battery and Cables

Winter puts additional burdens on the battery system. Visually inspect the battery and cables as described in Section 6. The level of charge in your battery can be checked by your Hyundai dealer or a service station.

C160E01A-AAT

### **Change to "Winter Weight" Oil if Necessary**

In some climates it is recommended that a lower viscosity "winter weight" oil be used during cold weather. See Section 9 for recommendations. If you aren't sure what weight oil you should use, consult your Hyundai dealer.

C160F01A-AAT

### **Check Spark Plugs and Ignition System**

Inspect your spark plugs as described in Section 6 and replace them if necessary. Also check all ignition wiring and components to be sure they are not cracked, worn or damaged in any way.

C160G01A-AAT

### **To Keep Locks from Freezing**

To keep the locks from freezing, squirt an approved de-icer fluid or glycerine into the key opening. If a lock is covered with ice, squirt it with an approved de-icing fluid to remove the ice. If the lock is frozen internally, you may be able to thaw it out by using a heated key. Handle the heated key with care to avoid injury.

C160H01A-AAT

### **Use Approved Anti-Freeze in Window Washer System**

To keep the water in the window washer system from freezing, add an approved anti-freeze solution in accordance with instructions on the container. Window washer anti-freeze is available from Hyundai dealers and most auto parts outlets. Do not use engine coolant or other types of anti-freeze as these may damage the finish.

C160I01L-AAT

### **Don't Let Your Parking Brake Freeze**

Under some conditions your parking brake can freeze in the engaged position. This is most likely to happen when there is an accumulation of snow or ice around or near the rear brakes or if the brakes are wet. If there is a risk the parking brake may freeze, apply it only temporarily while you put the gear selector lever in "P" and block the rear wheels so the car cannot roll. Then release the parking brake.

C160J01A-AAT

### **Don't Let Ice and Snow Accumulate Underneath**

Under some conditions, snow and ice can build up under the fenders and interfere with the steering. When driving in severe winter conditions where this may happen, you should periodically check underneath the car to be sure the movement of the front wheels and the steering components is not obstructed.

## TRAILER OR VEHICLE TOWING

C160K01A-AAT

**Carry Emergency Equipment**

Depending on the severity of the weather where you drive your car, you should carry appropriate emergency equipment. Some of the items you may want to carry include tire chains, tow straps or chains, flashlight, emergency flares, sand, a shovel, jumper cables, a window scraper, gloves, ground cloth, coveralls, a blanket, etc.

C170A01A-AAT

**HIGHER SPEED MOTORING****Pre-Trip Inspections****1. Tires:**

Adjust the tire inflation pressures to specification. Low tire inflation pressures will result in overheating and possible failure of the tires. Avoid using worn or damaged tires which may result in reduced traction or tire failure.

**NOTE:**

**Never exceed the maximum tire inflation pressure shown on the tires.**

**2. Fuel, engine coolant and engine oil:**

High speed travel consumes more fuel than urban motoring. Do not forget to check both engine coolant and engine oil.

**3. Drive belt:**

A loose or damaged drive belt may result in overheating of the engine.

C180A01A-AAT

**USE OF LIGHTS**

Check your lights regularly for correct operation and always keep them clean. When driving during the day in conditions of poor visibility, it is helpful to drive with headlights on low beam. This enables you to be seen as well as to see.

C190A01A-AAT

If you are considering towing with your car, you should first check with your State's Department of Motor Vehicles to determine their legal requirements.

Since laws vary from state to state the requirements for towing trailers, cars, or other types of vehicles or apparatus may differ. Ask your Hyundai dealer for further details before towing.

**CAUTION:**

**Do not do any towing with your car during its first 1,200 miles (2,000 km) in order to allow the engine to properly break in. Failure to heed this caution may result in serious engine or transaxle damage.**

C190B01S-AAT

**Trailer Hitches**

Select the proper hitch and ball combination, making sure that its location is compatible with that of the trailer or vehicle being towed.

Use a quality non-equalizing hitch which distributes the tongue load uniformly throughout the chassis.

The hitch should be bolted securely to the car and installed by a qualified technician. **DO NOT USE A HITCH DESIGNED FOR TEMPORARY INSTALLATION AND NEVER USE ONE THAT ATTACHES ONLY TO THE BUMPER.**

C190C01Y-AAT

### Trailer Brakes

If your trailer is equipped with a braking system, make sure it conforms to federal and/or local regulations and that it is properly installed and operating correctly.

#### NOTE:

If you tow a trailer or vehicle, your car will require more frequent maintenance due to the additional load. See Maintenance Under Severe Usage Conditions" on page 5-6.

#### CAUTION:

- o Never connect a trailer brake system directly to the vehicle brake system.
- o When towing a trailer on steep grades (in excess of 12%) pay close attention to the engine coolant temperature gauge to ensure the engine does not overheat. If the needle of the coolant temperature gauge moves across the dial towards "H" (HOT), pull over and stop as soon as it is safe to do so, and allow the engine to idle until it cools down. You may proceed once the engine has cooled sufficiently.

C190D01A-AAT

### Safety Chains

Should the hitch connection between your car and the trailer or vehicle you are towing fail, the trailer or vehicle could wander dangerously across other lanes of traffic and ultimately leave the roadway. To eliminate this potentially dangerous situation, safety chains, attached between your car and the trailer or towed vehicle, are required in most states.

C190E02L-AAT

### Trailer Weight Limit

- o Keep the tongue load 10% of the total trailer load.
- o  $\frac{\text{Tongue load}}{\text{Total trailer weight}} \times 100 = 10\% \text{ (MAX)}$
- o Tongue loads can be increased or decreased by redistributing the load in the trailer.  
This can be verified by checking the total weight of the loaded trailer and then checking the load on the tongue.

**NOTE:**

1. Never load the trailer with more weight in the back than in the front. About 60% of the trailer load should be in the front half on the trailer and the remaining 40% in the rear.

2. The total gross vehicle weight with trailer must not exceed the Gross Vehicle Weight Rating (GVWR) shown on the vehicle identification plate (see page 8-2). The total gross vehicle weight is the combined weight of the vehicle, driver, all passengers and their luggage, cargo, hitch, trailer tongue load and other optional equipment.

3. The front or rear axle weight must not exceed the Gross Axle Weight Rating (GAWR) shown on the vehicle identification plate (see page 8-2). It is possible that your towing package does not exceed the GVWR but exceeds the GAWR. Improper trailer loading and/or too much luggage in the trunk can overload the rear axle. Redistribute the load and check the axle weight again.

**CAUTION:**

The following specifications are recommended when towing a trailer. The loaded trailer weight cannot safely exceed the values in the chart.

Lbs. (kg)

|               | Maximum Towable Weight |            |
|---------------|------------------------|------------|
|               | Trailer                | Tongue     |
| With Brake    | 2000 (907)             | 200 (90.7) |
| Without Brake | 1000 (453)             | 100 (45.3) |

**WARNING:**

- o Improperly loading your vehicle and trailer can seriously affect its steering and braking performance causing a crash which could cause serious injury or death.
- o Towing a trailer affected vehicle handling and braking.
- o Drive more slowly when towing a trailer and allow more distance when braking.
- o Be careful when driving in slippery and windy conditions.
- o Be careful when turning and while driving up and down hills.
- o Do not exceed 45 mph or the posted towing speed limit, whichever is lower.

C190F01L-AAT

### Trailer or Vehicle Towing Tips

1. Before towing, check hitch and safety chain connections as well as proper operation of the trailer running lights, brake lights, and turn signals.
2. Always drive your vehicle at a moderate speed (Less than 60 mph)
3. Trailer towing requires more fuel than normal conditions.
4. To maintain engine braking efficiency, do not tow a trailer with the transaxle engaged in an overdrive gear.
5. Always secure items in the trailer to prevent load shift while driving.
6. Check the condition and air pressure of all tires on the trailer and your car. Low tire pressure can seriously affect the handling. Also check the spare tire.
7. The vehicle/trailer combination is more affected by crosswind and buffeting. When being passed by a large vehicle, keep a constant speed and steer straight ahead. If there is too much wind buffeting, slow down to get out of the other vehicle's air turbulence.
8. When parking your car and trailer, especially on a hill, be sure to follow all the normal precautions. Turn your front wheel into the curb, set the parking brake firmly, and put the transaxle in Park. In addition, place wheel chocks at each of the trailer's tires.

9. If the trailer has electric brakes, start your vehicle and trailer moving, and then apply the trailer brake controller by hand to be sure the brakes are working. This lets you check your electrical connection at the same time.
10. During your trip, check occasionally to be sure that the load is secure, and that the lights and any trailer brakes are still working.
11. Avoid jerky starts, sudden acceleration or sudden stops.
12. Avoid sharp turns and rapid lane changes.
13. Avoid holding the brake pedal down too long or too frequently. This could cause the brakes to overheat, resulting in reduced braking efficiency.
14. When going down a hill, shift into a lower gear and use the engine braking effect. When ascending a long grade, downshift the transaxle to a lower gear and reduce speed to reduce chances of engine overloading and/or overheating.
15. If you have to stop while going uphill, do not hold the vehicle in place by pressing on the accelerator. This can cause the automatic transaxle to overheat. Use the parking brake or footbrake.

#### NOTE:

When towing check transaxle fluid more frequently.

#### CAUTION:

If overheating should occur when towing, (the temperature gauge reads near red zone), taking the following action may reduce or eliminate the problem.

1. Turn off the air conditioner.
2. Reduce highway speed.
3. Select a lower gear when going uphill.
4. While in stop and go traffic, place the gear selector in park or neutral and idle the engine at a higher speed.

## VEHICLE LOAD LIMIT

C190F01L-AAT

## Tire and Loading Information Label

| TIRE AND LOADING INFORMATION   |                              |         |  |
|--|------------------------------|---------|--|
| SEATING CAPACITY   |                              |         |  |
| TOTAL X  |                              | FRONT X | REAR X   |
| The combined weight of occupants and cargo should never exceed XXX pounds. |                              |         |  |
| TIRE SIZE  | COLD TIRE INFLATION PRESSURE |         |  |
| PXXX/XXRXX<br>XXH  | FOR UP TO<br>X PERSONS       | FRONT   | XXXXPA, XXPSI  |
|  |                              | REAR    | XXXXPA, XXPSI  |
|  | MAX VEHICLE<br>WEIGHT LIMIT  | FRONT   | XXXXPA, XXPSI  |
|  |                              | REAR    | XXXXPA, XXPSI  |
|  |                              |         | SEE OWNER'S<br>MANUAL FOR<br>ADDITIONAL<br>INFORMATION |

I030B01XG

The tire label located on the driver's door edge gives the original tire size, cold tire pressures recommended for your vehicle, the number of people that can be in your vehicle and vehicle capacity weight.

### Steps for Determining Correct Load Limit

- (1) Locate the statement "The combined weight of occupants and cargo should never exceed XXX pounds" on your vehicle's placard.
- (2) Determine the combined weight of the driver and passengers that will be riding in your vehicle.
- (3) Subtract the combined weight of the driver and passengers from XXX kilograms or XXX pounds.
- (4) The resulting figure equals the available amount of cargo and luggage load capacity. For example, if the "XXX" amount equals 1400 lbs, and there will be five 150 lb. passengers in your vehicle, the amount of available cargo and luggage load capacity is 650 lbs. (1400-750 (5 x 150) = 650 lbs.)
- (5) Determine the combined weight of luggage and cargo being loaded on the vehicle. That weight may not safely exceed the available cargo and luggage load capacity calculated in Step 4.
- (6) If your vehicle will be towing a trailer, load from your trailer will be transferred to your vehicle. Consult this manual to determine how this reduces the available cargo and luggage load capacity of your vehicle.

**Example 1**

| Item | Description                                     | Total                |
|------|---|----------------------|
| A    | Vehicle Capacity Weight                         | 1400 lbs<br>(640 kg) |
| B    | Subtract Occupant Weight<br>150 lbs (70 kg) x 2 | 300 lbs<br>(140 kg)  |
| C    | Available Cargo and<br>Luggage weight           | 1100 lbs<br>(500 kg) |

**Example 2**

| Item | Description                                     | Total                |
|------|---|----------------------|
| A    | Vehicle Capacity Weight                         | 1400 lbs<br>(640 kg) |
| B    | Subtract Occupant Weight<br>150 lbs (70 kg) x 5 | 750 lbs<br>(350 kg)  |
| C    | Available Cargo and<br>Luggage Weight           | 650 lbs<br>(290 kg)  |

**Example 3**

| Item | Description                                     | Total                |
|------|---|----------------------|
| A    | Vehicle Capacity Weight                         | 1400 lbs<br>(640 kg) |
| B    | Subtract Occupant Weight<br>172 lbs (78 kg) x 5 | 860 lbs<br>(390 kg)  |
| C    | Available Cargo Weight                          | 540 lbs<br>(250 kg)  |

Refer to your vehicle's tire and loading information label for specific information about your vehicle's capacity weight and seating positions. The combined weight of the driver, passengers and cargo should never exceed your vehicle's capacity weight.

C190G01L-AAT

### Compliance Label

|   |               |               |                        |
|---|---------------|---------------|------------------------|
| [ ]   |               |               |                        |
| GAWR  | GVWR<br>TIRES | PAINT<br>RIMS | TRIM<br>COLD TIRE INFL |
| FRONT   |               |               |                        |
| REAR  |               |               |                        |
| THIS VEHICLE CONFORMS TO ALL APPLICABLE U. S. A. FEDERAL<br>MOTOR VEHICLE SAFETY AND THEFT PREVENTION STANDARDS<br>IN EFFECT ON THE DATE OF MANUFACTURE SHOWN ABOVE |               |               |                        |
| V. I. N. [ ]  |               |               | TYPE: MPV              |
| [ ]   |               |               |                        |

C190G01JM

The compliance label is located on the driver's side of the center pillar outer panel.

The label shows the size of your original tires and the inflation pressures needed to obtain the gross weight capacity of your vehicle. This is called the GVWR (Gross Vehicle Weight Rating). The GVWR includes the weight of the vehicle, all occupants, fuel and cargo.

This label also tells you the maximum weights that can be supported by the front and rear axles, called Gross Axle Weight Rating (GAWR). To find out the actual loads on your front and rear axles, you need to go to a weigh station and weigh your vehicle. Your dealer can help you with this. Be sure to spread out your load equally on both sides of the centerline.

#### WARNING:

- o Never exceed the GVWR for your vehicle, or the GAWR for either the front or rear axle.
- o Do not load your vehicle any heavier than the GVWR, or either the maximum front or rear GAWR. If you do, parts on your vehicle can break, and it can change the way your vehicle handles. This could cause you to lose control and crash. Also, overloading can shorten the life of your vehicle.

**NOTE:**

- o **Overloading your vehicle may cause damage. Repairs would not be covered by your warranty. Do not overload your vehicle.**
- o **Using heavier suspension components to get added durability might not change your weight ratings. Ask your dealer to help you load your vehicle the right way.**

The label will help you decide how much cargo and installed equipment your vehicle can carry.

If you carry items inside your vehicle – like suitcases, tools, packages, or anything else – they move as fast as the vehicle goes. If you have to stop or turn quickly, or if there is a crash, the items will keep going and can cause an injury if they strike the driver or a passenger.

**WARNING:**

**Items you carry inside your vehicle can strike and injure people in a sudden stop or turn, or in a crash.**

- o **Put things in the cargo area of your vehicle. Try to spread the weight evenly.**
- o **Never stack items, like suitcases, inside the vehicle above the tops of the seats.**
- o **Do not leave an unsecured child restraint in your vehicle.**
- o **When you carry something inside the vehicle, secure it.**
- o **Do not drive with a seat folded down unless necessary.**

## WHAT TO DO IN AN EMERGENCY

|                                    |      |
|------------------------------------|------|
| If the Engine Will Not Start ..... | 3-2  |
| Jump Starting .....                | 3-3  |
| If the Engine Overheats .....      | 3-4  |
| Spare Tire .....                   | 3-5  |
| If You Have a Flat Tire .....      | 3-5  |
| If Your Car Must Be Towed .....    | 3-11 |
| Emergency Towing .....             | 3-12 |
| If You Lose Your Keys .....        | 3-13 |

D010A01A-AAT

**WARNING:**

If the engine will not start, do not push or pull the car to start it. This could result in a collision or cause other damage. In addition, push or pull starting may cause the catalytic converter to be overloaded and create a fire hazard.

D010B01L-AAT

### If Engine Doesn't Turn Over or Turns Over Slowly

1. Be sure the gear selector lever is in "N" or "P" and the emergency brake is set.
2. Check the battery connections to be sure they are clean and tight.
3. Turn on the interior light. If the light dims or goes out when you operate the starter, the battery is discharged.
4. Check the starter connections to be sure they are securely tightened.
5. Do not push or pull the vehicle to start it. See instructions for "Jump Starting" on the following pages.

D010C02A-AAT

### If Engine Turns Over Normally but Does Not Start

1. Check fuel level.
2. With the key in the "OFF" position, check all connectors at ignition coil and spark plugs. Reconnect any that may be disconnected or loose.
3. Check the fuel line in the engine compartment.
4. If the engine still does not start, call a Hyundai dealer or seek other qualified assistance.

D010D01A-AAT

### If Engine Stalls While Driving

1. Reduce your speed gradually, keeping a straight line. Move cautiously off the road to a safe place.
2. Turn on your emergency flashers.
3. Try to start the engine again. If your vehicle will not start, contact a Hyundai dealer or seek other qualified assistance.

## JUMP STARTING

D020A03A-AAT

D020A01L-1

**WARNING:**

The gas produced by the battery during the jump-start operation is highly explosive. If these instructions are not followed exactly, serious personal injury and damage to the vehicle may occur! If you are not sure how to follow this procedure, seek qualified assistance. Automobile batteries contain sulfuric acid. This is poisonous and highly corrosive. When jump starting, wear protective glasses and be careful not to get acid on yourself, your clothing or on the car.

- o If you should accidentally get acid on your skin or in your eyes, immediately remove any contaminated clothing and flush the area with clear water for at least 15 minutes. Then promptly obtain medical attention. If you must be transported to an emergency facility, continue to apply water to the affected area with a sponge or cloth.
- o The gas produced by the battery during the jump-start operation is highly explosive. Do not smoke or allow a spark or an open flame in the vicinity.
- o The battery being used to provide the jump start must be 12-volt. If you cannot determine that it is a 12-volt battery, do not attempt to use it for the jump start.
- o To jump start a car with a discharged battery, follow this procedure exactly:
  1. If the booster battery is installed in another vehicle, be sure the two vehicles are not touching.
  2. Turn off all unnecessary lights and accessories in both vehicles.
  3. Attach the clamps of the jumper cable in the exact location shown on the previous page. First, attach one clamp of the jumper cable to the positive (+) post or cable of the discharged battery. Then attach the other end of the same cable to the positive (+) post or cable of the booster battery. Next, using the other cable, attach one clamp to the negative (-) post or cable of the booster battery. Then attach the other end of that cable to a solid metal part of the engine of the vehicle with the discharged battery away from the battery. Do not connect the cable to any moving part.
  4. Start the engine in the car with the booster battery and let it run for a few minutes. This will help to assure that the booster battery is fully charged. During the jumping operation, run the engine in this vehicle at about 2,000 rpm.
  5. Start the engine in the car with the discharged battery using the normal starting procedure. After the engine starts, leave the jumper cables connected and let the engine run at fast idle or about 2,000 rpm for several minutes.
  6. Carefully remove the jumper cables in the reverse order of attachment.

If you do not know why your battery became discharged (because the lights were left on, etc.), have the charging system checked by your Hyundai dealer.

## IF THE ENGINE OVERHEATS

D030A01L-AAT

If your temperature gauge indicates overheating, you experience a loss of power, or hear loud pinging or knocking, the engine is probably too hot. If this happens, you should:

1. Pull off the road and stop as soon as it is safe to do so.
2. Place the gear selector lever in "P" and set the parking brake. If the air conditioning is on, turn it off.
3. If engine coolant is running out under the car or steam is coming out from the hood, stop the engine. Do not open the hood until the coolant has stopped running or the steaming has stopped. If there is no visible loss of engine coolant and no steam, leave the engine running and check to be sure the engine cooling fan is operating. If the fan is not running, turn the engine off.
4. Check to see if the water pump drive belt is missing. If it is not missing, check to see that it is tight. If the drive belt seems to be satisfactory, check for coolant leaking from the radiator, hoses or under the car. (If the air conditioning had been in use, it is normal for cold water to be draining from it when you stop).

**WARNING:**

**While the engine is running, keep hair, hands and clothing away from moving parts such as the fan and drive belts to prevent injury.**

**WARNING:**

**Do not remove the radiator cap when the engine is hot. This can allow coolant to be blown out of the opening and cause serious burns.**

5. If the water pump drive belt is broken or engine coolant is leaking out, stop the engine immediately and call the nearest Hyundai dealer for assistance.
6. If you cannot find the cause of the overheating, wait until the engine temperature has returned to normal. Then, if coolant has been lost, carefully add coolant to the reservoir to bring the fluid level in the reservoir up to the halfway mark.
7. Proceed with caution, keeping alert for further signs of overheating. If overheating happens again, call a Hyundai dealer for assistance.

**CAUTION:**

**Serious loss of coolant indicates there is a leak in the cooling system and this should be checked as soon as possible by a Hyundai dealer.**

## SPARE TIRE

D040A01L-AAT

The following instructions for the FULL SIZE spare tire should be observed: Check inflation pressure as soon as practical after installing the spare tire, and adjust to the specified pressure. The tire pressure should be periodically checked and maintained at the specified pressure while the tire is stored.

## Spare Tire Pressure

| TIRE SIZE    | COLD TIRE INFLATION PRESSURE |            |               |
|--------------|------------------------------|------------|---------------|
|              | P205/60R16<br>94H            | LOAD UP TO | FRONT         |
| 4 PERSONS    |                              | REAR       | 210KPA, 30PSI |
| MAX. VEHICLE |                              | FRONT      | 240KPA, 35PSI |
| WEIGHT LIMIT |                              | REAR       | 240KPA, 35PSI |

D040B01A-AAT

## Handling the Spare Tire

Remove the installation bolt to remove the spare tire. To replace the spare tire in its storage compartment, tighten the bolt firmly with your fingers until there is no more play in the spare tire.

## IF YOU HAVE A FLAT TIRE

5

D050A01L-AAT

If a tire goes flat while you are driving:

1. Take your foot off the accelerator pedal and let the car slow down while driving straight ahead. Do not apply the brakes immediately or attempt to pull off the road as this may cause a loss of control. When the car has slowed to such a speed that it is safe to do so, brake carefully and pull off the road. Drive off the road as far as possible and park on firm, level ground. If you are on a divided highway, do not park in the median area between the two traffic lanes.
2. When the car is stopped, turn on your emergency hazard flashers, set the parking brake and put the transaxle in "P".
3. Have all passengers get out of the car. Be sure they all get out on the side of the car that is away from traffic.
4. Change the tire following the instructions provided on the following pages.

## CHANGING A FLAT TIRE

D060A01L-AAT

D060A01L

The procedure described on the following pages can be used to rotate tires as well as to change a flat tire. When preparing to change a flat tire, check to be sure the gear selector lever is in "P" and that the parking brake is set, then:

D060K02Y-AAT

### Wheel Cap (If Installed)

D060K04L

1. Wrap a piece of cloth around the tip of the wrench bar to avoid scratching.
2. Insert a wrench bar into the notch of the wheel cap and pry gently to remove the wheel cap.

HXGS415

3. Change the flat tire.
4. Reinstall the wheel cap by fitting the boss of the wheel cap in the notch of the wheel, hitting the center of the wheel cap with your hand.

D060B01E-AAT

**1. Obtain Spare Tire and Tool**

Remove the spare tire and take out the jack and tool bag from the trunk.

**NOTE:**

The jack is located beneath the luggage mat in the vehicle trunk.

D060C01A-AAT

**2. Block the Wheel**

Block the wheel that is diagonally opposite from the flat to keep the vehicle from rolling when the car is raised on the jack.

D060D01A-AAT

**3. Loosen Wheel Nuts**

The wheel nuts should be loosened slightly before raising the car. To loosen the nuts, turn the wrench handle counterclockwise. When doing this, be sure that the socket is seated completely over the nut so it cannot slip off. For maximum leverage, position the wrench so the handle is to the right as shown in the drawing. Then, while holding the wrench near the end of the handle, pull up on it with steady pressure. Do not remove the nuts at this time. Just loosen them about one-half turn.

D060E01A-AAT

**4. Put the Jack in Place**

HXGS402

The base of the jack should be placed on firm, level ground. The jack should be positioned as shown in the drawing.

D060F02E-AAT

**5. Raising the Car**

HFC4022

After inserting a wrench bar into the wheel nut wrench, install the wrench bar into the jack as shown in the drawing. To raise the vehicle, turn the wheel nut wrench clockwise. As the jack begins to raise the vehicle, double check that it is properly positioned and will not slip. If the jack is on soft ground or sand, place a board, brick, flat stone or other object under the base of the jack to keep it from sinking.

Raise the car high enough so that the fully inflated spare tire can be installed. To do this, you will need more ground clearance than is required to remove the flat tire.

**WARNING:**

**Do not get under the car when it is supported by the jack! This is very dangerous as the vehicle could fall and cause serious injury or death. No one should stay in the car while the jack is being used.**

D060G02Y-AAT

## 6. Changing Wheels

Loosen the wheel nuts and remove them with your fingers. Slide the wheel off the studs and lay it flat so it cannot roll away. To put the spare wheel on the hub, pick up the spare tire, line up the holes with the studs and slide the wheel onto them. If this is difficult, tip the wheel slightly and get the top hole in the wheel lined up with the top stud. Then jiggle the wheel back and forth until the wheel can be slid over the other studs.

**!** **WARNING:**  
Wheels and wheel covers may have sharp edges. Handle them carefully to avoid possible severe injury. Before putting the wheel into place, be sure that there is nothing on the hub or wheel (such as mud, tar, gravel, etc.) that interferes with the wheel fitting solidly against the hub. If there is, remove it. If there is not good contact on the mounting sur-

**!** **WARNING:**  
face between the wheel and hub, the wheel nuts could loosen and cause the loss of a wheel. Loss of a wheel may result in loss of control of the vehicle. This may cause serious injury or death.

D060H02Y-AAT

**7. Reinstall Wheel Nuts**

To reinstall the wheel, hold it on the studs, put the wheel nuts on the studs and tighten them finger tight. The nuts should be installed with their small diameter ends directed inward. Jiggle the tire to be sure it is completely seated, then tighten the nuts as much as possible with your fingers again.

D060I01E-AAT

**8. Lower Vehicle and Tighten Nuts**

Lower the car to the ground by turning the wheel nut wrench counterclockwise. Then position the wrench as shown in the drawing and tighten the wheel nuts. Be sure the socket is seated completely over the nut. Do not stand on the wrench handle or use an extension pipe over the wrench handle.

Go around the wheel tightening every other nut until they are all tight. Then double-check each nut for tightness. After changing wheels, have a technician tighten the wheel nuts to their proper torque as soon as possible.

**Wheel nut tightening torque:**

Steel wheel & aluminium alloy wheel:  
65-80 lb.ft (900-1,100 kg.cm)

## IF YOUR CAR MUST BE TOWED

D060J01E-GAT

**After Changing Wheels**

D060J01L

If you have a tire gauge, remove the valve cap and check the air pressure. If the pressure is lower than recommended, drive slowly to the nearest service station and inflate to the correct pressure. If it is too high, adjust it until it is correct. Always reinstall the valve cap after checking or adjusting tire pressure. If the cap is not replaced, air may leak from the tire. If you lose a valve cap, buy another and install it as soon as possible.

After you have changed wheels, always secure the flat tire in its place in the trunk and return the jack and tools to their proper storage locations.

D080A01A-AAAT

- o OK FOR AUTOMATIC TRANSAXLE EQUIPPED VEHICLE

D080A01L

**CAUTION:**  
Your car can be damaged if towed incorrectly!

If your car has to be towed, it should be done by your Hyundai dealer or a commercial tow truck service. This will help assure that your car is not damaged in towing. Also, professionals are generally aware of state and local laws governing towing. In any case, rather than risk damage to your car, it is suggested that you show this information to the tow truck operator. Be sure that a safety chain system is used and that all state and local laws are observed.

D080C02A-AAT

**Towing a Car With Automatic Transaxle****CAUTION:**

A car with an automatic transaxle should never be towed from the rear with the front wheels on the ground. This can cause serious damage to the transaxle. If the car must be towed from the rear, a towing dolly must be used under the front wheels.

If the car is being towed with the rear wheels on the ground, be sure the parking brake is released.

**NOTE:**

Before towing, check the level of the transaxle fluid. If it is below the "HOT" mark on the dipstick, add fluid. If you cannot add fluid, a towing dolly must be used as described above.

**EMERGENCY TOWING**

D080D01E-AAT

For emergency towing when no commercial tow vehicle is available, attach a tow cable, chain or strap to one of the towing hooks under the front of your car. Do not attempt to tow your vehicle in this manner on any unpaved surface. This could result in serious damage to your car. Nor should towing be attempted if the wheels, drive train, axles, steering or brakes are damaged. Before towing, be sure the transaxle is in neutral and the key is in "ACC" (with the engine off) or in the "ON" position (with the engine running). A driver must be in the towed car to steer it and operate the brakes.

## IF YOU LOSE YOUR KEYS

### CAUTION:

If the car is being towed with all four wheels on the ground, it can be towed only from the front. Be sure that the transaxle is in neutral. Do not tow at speeds greater than 30 mph (50 km/h) and for more than 15 miles (25 km). Be sure the steering is unlocked by placing the key in the "ACC" position. A driver must be in the towed vehicle to operate the steering and brakes.

D120A01A-AAT

If you lose your keys, many Hyundai dealers can make you a new key if you have your key number.

If you lock the keys inside your car and you cannot obtain a new key, many Hyundai dealers can use special tools to open the door for you.

## CORROSION PREVENTION & APPEARANCE CARE

|                                 |     |
|---------------------------------|-----|
| Corrosion Protection .....      | 4-2 |
| To Help Prevent Corrosion ..... | 4-3 |
| Washing and Waxing .....        | 4-4 |
| Cleaning the Interior .....     | 4-5 |

## CORROSION PROTECTION

E010A01A-AAT

### Protecting Your Hyundai from Corrosion

By using the most advanced design and construction practices to combat corrosion, Hyundai produces cars of the highest quality. However, this is only part of the job. To achieve the long-term corrosion resistance your Hyundai can deliver, the owner's cooperation and assistance is also required.

E010B01A-AAT

### Common Causes of Corrosion

The most common causes of corrosion on your car are:

- o Road salt, dirt and moisture that is allowed to accumulate underneath the car.
- o Removal of paint or protective coatings by stones, gravel, abrasion or minor scrapes and dents which leave unprotected metal exposed to corrosion.

E010C01A-AAT

### High-Corrosion Areas

If you live in an area where your car is regularly exposed to corrosive materials, corrosion protection is particularly important. Some of the common causes of accelerated corrosion are road salts, dust control chemicals, ocean air and industrial pollution.

E010D01A-AAT

### Moisture Breeds Corrosion

Moisture creates the conditions in which corrosion is most likely to occur. For example, corrosion is accelerated by high humidity, particularly when temperatures are just above freezing. In such conditions, the corrosive material is kept in contact with the car surfaces by moisture that is slow to evaporate.

Mud is particularly corrosive because it is slow to dry and holds moisture in contact with the vehicle. Although the mud appears to be dry, it can still retain the moisture and promote corrosion.

High temperatures can also accelerate corrosion of parts that are not properly ventilated so the moisture can be dispersed. For all these reasons, it is particularly important to keep your car clean and free of mud or accumulations of other materials. This applies not only to the visible surfaces but particularly to the underside of the car.

## TO HELP PREVENT CORROSION

E020A01A-AAT

You can help prevent corrosion from getting started by observing the following:

E020B01A-AAT

### Keep Your Car Clean

The best way to prevent corrosion is to keep your car clean and free of corrosive materials. Attention to the underside of the car is particularly important.

- o If you live in a high-corrosion area — where road salts are used, near the ocean, areas with industrial pollution, acid rain, etc.—, you should take extra care to prevent corrosion. In winter, hose off the underside of your car at least once a month and be sure to clean the underside thoroughly when winter is over.
- o When cleaning underneath the car, give particular attention to the components under the fenders and other areas that are hidden from view. Do a thorough job; just dampening the accumulated mud rather than washing it away will accelerate corrosion rather than prevent it. Water under high pressure and steam are particularly effective in removing accumulated mud and corrosive materials.

- o When cleaning lower door panels, rocker panels and frame members, be sure that drain holes are kept open so that moisture can escape and not be trapped inside to accelerate corrosion.

E020C01A-AAT

### Keep Your Garage Dry

Don't park your car in a damp, poorly ventilated garage. This creates a favorable environment for corrosion. This is particularly true if you wash your car in the garage or drive it into the garage when it is still wet or covered with snow, ice or mud. Even a heated garage can contribute to corrosion unless it is well ventilated so moisture is dispersed.

E020D02A-AAT

### Keep Paint and Trim in Good Condition

Scratches or chips in the finish should be covered with "touch-up" paint as soon as possible to reduce the possibility of corrosion. If bare metal is showing through, the attention of a qualified body and paint shop is recommended.

**Bird droppings :** Bird droppings are highly corrosive and may damage painted surfaces in just a few hours. Always remove bird droppings as soon as possible.

E020E01A-AAT

### Don't Neglect the Interior

Moisture can collect under the floor mats and carpeting to cause corrosion. Check under the mats periodically to be sure the carpeting is dry. Use particular care if you carry fertilizers, cleaning materials or chemicals in the car. These should be carried only in proper containers and any spills or leaks should be cleaned up, flushed with clear water and thoroughly dried.

## WASHING AND WAXING

E030A01GK-AAT

### Washing Your Hyundai

Never wash your car when the surface is hot from being in the sun. Always wash your car in the shade.

Wash your car frequently. Dirt is abrasive and can scratch the paint if it is not removed. Air pollution or acid rain may damage the paint and trim through chemical action if pollutants are allowed to remain in contact with the surface. If you live near the ocean or in an area where road salts or dust control chemicals are used, you should pay particular attention to the underside of the car. Start by rinsing the car to remove dust and loose dirt. In winter, or if you have driven through mud or muddy water, be sure to thoroughly clean the underside as well. Use a hard direct stream of water to remove accumulations of mud or corrosive materials. High pressure car washes may cause water to enter your vehicle. Use a good quality car-washing solution and follow the manufacturer's directions on the package. These are available at your Hyundai dealer or auto parts outlet. Don't use strong household detergents, gasoline, strong solvents or abrasive cleaning powders as these may damage the finish.

Use a clean sponge or cloth, rinse it frequently and don't damage the finish by rubbing too hard. For stubborn spots, dampen them frequently and remove them a little at a time.

To clean whitewall tires, use a stiff brush or soapy steel-wool scouring pad.

To clean plastic wheel covers, use a clean sponge or soft cloth and water.

To clean cast aluminum alloy wheels, use a mild soap or neutral detergent. Do not use abrasive cleaners. Protect the bare-metal surfaces by cleaning, polishing and waxing. Because aluminum is subject to corrosion, be sure to give aluminum alloy wheels special attention in winter. If you drive on salted roads, clean the wheels thoroughly afterwards.

After washing, be sure to rinse thoroughly. If soapy water dries on the finish, streaking will result.

When the weather is warm and the humidity low, you may find it necessary to rinse each section immediately after washing to avoid streaking.

After rinsing, dry the car using a damp chamois or soft, absorbent cloth. The reason for drying the car is to remove water from the car so it will dry without water spots. Don't rub, this can damage the finish.

If you find any nicks or scratches in the paint, use touch-up paint to cover them to prevent corrosion. To protect the paintwork of the car against corrosion, you must clean your Hyundai (at least once a month). Give special attention to the removal of salt, mud and other substances on the underside of the splashboards of the car. Make sure that the outlets and the underside of the doors are open. Paint damage can be caused by small accumulation of tar, industrial precipitation, tree resin, insects and bird droppings, when not removed immediately. If water alone is not strong enough to remove the accumulated dirt, use a mild car washing solution. Be sure to rinse the surface after washing to remove the solution. Never allow the solution to dry on the painted surfaces.

E030B01A-AAT

### Spot Cleaning

Don't use gasoline, strong solvents or corrosive cleaning agents. These can damage the finish of the car. To remove road tar, use turpentine on a clean, soft cloth. Be gentle.

To remove dead insects or tree sap, use warm water and mild soap or car-washing solution. Soak the spot and rub gently. If the paint has lost its luster, use a commercial car-cleaning polish.

E030C01A-AAT

### Polishing and Waxing

Always wash and dry the car before polishing or waxing or using a combination cleaner and wax. Use a good quality commercial product and follow the manufacturer's directions on the container. Polish and wax the bright trim pieces as well as the paint.

E030D01A-AAT

### When to Wax Again

You should polish and wax the car again when water no longer beads on a clean surface but spreads out over a larger area.

E030E01A-AAT

### Maintaining Bumpers

Special precautions must be observed to preserve the appearance of the bumpers on your Hyundai. They are:

- o Be careful not to spill battery electrolyte or hydraulic brake fluid on the bumpers. If you do, wash it off immediately with clear water.
- o Be gentle when cleaning the bumper surfaces. They are made of soft plastic and the surface can be damaged if mistreated. Do not use abrasive cleaners. Use warm water and mild soap or car-washing solution.
- o Do not expose the bumpers to high temperatures. For example, if you have your car repainted, do not leave the bumpers on the car if the car is going to be placed in a high-temperature paint booth.

E040A01A-AAT

### To Clean the Vinyl Upholstery

To clean the vinyl upholstery, first remove loose dirt and dust with a vacuum cleaner. Then apply a solution of mild soap or detergent and water using a clean sponge or soft cloth. Allow this to stay on the surface to loosen the dirt, then wipe with a clean damp sponge or cloth. If all the dirt stains are not removed, repeat this procedure until the upholstery is clean. Do not use gasoline, solvent, paint thinner or other strong cleaners.

E040B01A-AAT

### **To Clean the Leather Upholstery (If Installed)**

In the normal course of use, leather upholstered surfaces will, like any material, pick-up dust and dirt. This dust and dirt must be cleaned off or it may work into the surface of the leather, causing damage.

Fine leather needs care, and should be cleaned when necessary. Washing leather thoroughly with soap and water will keep your leather lustrous, beautiful and ensure you have many years of wear.

Take a piece of cheese cloth and using any mild soap and lukewarm water, work up a good lather. Thoroughly wash the leather. Wipe clean with a slightly damp cloth and dry with soft cloth. Do this as often as the leather becomes soiled.

During tanning operations, sufficient oils are incorporated through processing that none need be applied during the life of the leather. Oil applied to the finished surface will in no way help the leather and may do more harm than good. Varnishes and furniture polishes should never be used under any conditions.

E040C01A-AAT

### **Cleaning the Carpets**

Use a foam-type carpet cleaner. Cleaners of this type are available in aerosol cans in liquid form or powder. Read the instructions and follow them exactly. Using a vacuum cleaner with the appropriate attachment, remove as much dirt from the carpets as possible. Apply the foam following the manufacturer's directions, then rub in overlapping circles. Do not add water. These cleaners work best when the carpet is kept as dry as possible.

E040D01A-AAT

### **Cleaning the Seat Belts**

To clean the seat belts, use a cloth or sponge with mild soap or detergent and warm water. Do not use strong detergents, dye, bleach or abrasive materials on the seat belts as this may weaken the fabric.

While cleaning the belts, inspect them for excessive wear, cuts, fraying or other signs of damage and replace them if necessary.

E040E01A-AAT

### **Cleaning the Windows**

You may use any household window cleaner on the windows. However, when cleaning the inside of the rear window be careful not to damage the rear window defroster wiring.

E050A01A-AAT

### **Any Questions?**

If you have any questions about the care of your car, consult your Hyundai dealer.

# VEHICLE MAINTENANCE REQUIREMENTS

|  |     |
|--|-----|
| Maintenance Intervals .....                      | 5-2 |
| Scheduled Maintenance .....                      | 5-4 |
| Maintenance Under Severe Usage Conditions .....  | 5-6 |
| Explanation of Scheduled Maintenance Items ..... | 5-7 |

**MAINTENANCE INTERVALS**

F010A01A-AAT

**Service Requirements**

To ensure that you receive the greatest number of miles of satisfying operation from your Hyundai, certain maintenance procedures must be performed. Although careful design and engineering have reduced these to a minimum, those that are required are of the utmost importance.

It is your responsibility to have these maintenance procedures performed to comply with the terms of the warranties covering your new Hyundai. The Owner's Handbook supplied with your new vehicle provides further information about these warranties.

F010B01A-AAT

**Maintenance Requirements**

The maintenance required for your Hyundai can be divided into three main areas:

- o Specified scheduled procedures
- o General checks
- o Do-it-yourself maintenance

F010C01A-AAT

**Specified Scheduled Procedures**

These are the procedures such as inspections, adjustments and replacements that are listed in the maintenance charts starting on page 5-4. These procedures must be performed at the intervals shown in the maintenance schedule to assure that your warranty remains in effect. Although it is strongly recommended that they be performed by the trained technicians at your Hyundai dealer, these procedures may be performed at any qualified service facility.

It is suggested that genuine Hyundai service parts be used for any required repairs or replacements. Other parts of equivalent quality such as engine oil, engine coolant, auto transaxle oil, brake fluid and so on which are not supplied by Hyundai Motor Company or its distributor

may be used without affecting your warranty coverage but you should always be sure these are equivalent to the quality of the original Hyundai parts. Your Owner's Handbook provides further information about your warranty coverage.

F010D01A-AAT

**General Checks**

These are the regular checks you should perform when you drive your Hyundai or you fill the fuel tank. A list of these items will be found on page 6-3.

F010E01A-AAT

**Do-It-Yourself Maintenance**

If you are mechanically inclined, own a few tools that are required and want to take the time to do so, you can inspect and service a number of items. For more information about doing it yourself, see Section 6.

F010F01A-AAT

**A Few Tips**

- o Whenever you have your Hyundai serviced, keep copies of the service records in your glovebox. This will help ensure that you can document that the required procedures have been performed to keep your warranties in effect. This is especially important when service is not performed by an authorized Hyundai dealer.
- o If you choose to do your own maintenance and repairs, you may find it helpful to have an official Hyundai Shop Manual. A copy of this publication may be purchased at your Hyundai dealer's parts department.

F020A02Y-AAT

**SCHEDULED MAINTENANCE REQUIREMENTS**

- o Inspection should be performed any time a malfunction is experienced or suspected.
- o Receipts for all emission control system services should be retained to demonstrate compliance with conditions of the emissions system warranty.
- o After 120 months or 150,000 miles (240,000 km), continue to follow the prescribed maintenance intervals.
- o For severe usage maintenance requirements, see page 5-6 of this section.

4 SCHEDULED MAINTENANCE

F030A01A-AAT

The following maintenance services must be performed to ensure good emission control and performance. Keep receipts for all vehicle emission services to protect your warranty. Where both mileage and time are shown, the frequency of service is determined by whichever occurs first.

F030B02Y-AAT

R :Replace I : Inspect and, after Inspection, clean, adjust, repair or replace if necessary.

6 MAINTENANCE UNDER SEVERE USAGE CONDITIONS

F040A03L-AAT

The following items must be serviced more frequently on cars normally used under severe driving conditions. Refer to the chart below for the appropriate maintenance intervals.

R : Replace      I : Inspect and, after inspection, clean, adjust, repair or replace if necessary

| MAINTENANCE ITEM   | MAINTENANCE OPERATION | MAINTENANCE INTERVALS                     | DRIVING CONDITION   |
|--|-----------------------|---|---------------------|
| ENGINE OIL AND FILTER  | R                     | VERY 3,000 MILES (4,800 KM) OR 3 MONTHS   | A, B, C, F, H       |
| AIR CLEANER FILTER   | R                     | MORE FREQUENTLY                           | C, E                |
| SPARK PLUGS  | R                     | MORE FREQUENTLY                           | B, H                |
| BRAKE PADS, CALIPERS AND ROTORS  | I                     | MORE FREQUENTLY                           | C, D, G, H          |
| REAR BRAKE DRUMS / LININGS, PARKING BRAKE  | I                     | MORE FREQUENTLY                           | C, D, G, H          |
| STEERING GEAR BOX, LINKAGE & BOOTS /<br>LOWER ARM BALL JOINT, UPPER ARM BALL JOINT | I                     | MORE FREQUENTLY                           | C, D, E, F, G       |
| DRIVESHAFTS AND BOOTS  | I                     | EVERY 7,500 MILES (12,000 KM) OR 6 MONTHS | C, E, F             |
| AUTOMATIC TRANSAXLE FLUID AND FILTER   | R                     | EVERY 30,000 MILES (48,000 KM)            | A, C, E, F, G, H, I |
| AIR CONDITIONER FILTER<br>(FOR EVAPORATOR AND BLOWER UNIT)                         | R                     | MORE FREQUENTLY                           | C, E                |

**SEVERE DRIVING CONDITIONS**

- A - Repeated short distance driving
- B - Extensive idling
- C - Driving in dusty, rough roads
- D - Driving in areas using salt or other corrosive materials or in very cold weather
- E - Driving in sandy areas

- F - More than 50% driving in heavy city traffic during hot weather above 90°F (32°C)
- G - Driving in mountainous areas
- H - Towing a trailer
- I - Driving as a patrol car, taxi, vehicle towing or other commercial use

## EXPLANATION OF SCHEDULED MAINTENANCE ITEMS

F060A01A-AAT

F060M01A-AAT

**o Engine Oil and Filter**

The engine oil and filter should be changed at the intervals specified in the maintenance schedule. If the car is being driven in severe conditions, more frequent oil and filter changes are required.

F060C01A-AAT

**o Fuel Filter**

A clogged filter can limit the speed at which the vehicle may be driven, damage the emission system and cause hard starting. If an excessive amount of foreign matter accumulates in the fuel tank, the filter may require replacement more frequently.

After installing a new filter, run the engine for several minutes, and check for leaks at the connections. Fuel filters should be installed by trained technicians.

F060B01A-AAT

**o Drive Belts**

Inspect all drive belts for evidence of cuts, cracks, excessive wear or oil and replace if necessary. Drive belts should be checked periodically for proper tension and adjusted as necessary.

F060D01A-AAT

**o Fuel Lines, Fuel Hoses and Connections**

Check the fuel lines, fuel hoses and connections for leakage and damage. Have a trained technician replace any damaged or leaking parts immediately.

F060F01A-AAT

**o Vacuum, Crankcase Ventilation Hoses**

Inspect the surface of hoses for evidence of heat and/or mechanical damage. Hard and brittle rubber, cracking, tears, cuts, abrasions, and excessive swelling indicate deterioration. Particular attention should be paid to examine those hose surfaces nearest to high heat sources, such as the exhaust manifold.

Inspect the hose routing to assure that the hoses do not come in contact with any heat source, sharp edges or moving component which might cause heat damage or mechanical wear. Inspect all hose connections, such as clamps and couplings, to make sure they are secure, and that no leaks are present. Hoses should be replaced immediately if there is any evidence of deterioration or damage.

F060G01A-AAT

**o Vapor Hose and Fuel Filler Cap**

The vapor hose and fuel filler cap should be inspected at those intervals specified in the maintenance schedule. Make sure that a new vapor hose or fuel filler cap is correctly replaced.

F060H01A-AAT

**o Air cleaner filter**

A Genuine Hyundai air cleaner filter is recommended when the filter is replaced.

F060J01A-AAT

**o Spark plugs**

Make sure to install new spark plugs of the correct heat range.

F060E01A-AAT

### o Timing belt

Inspect all parts related to the timing belt for damage and deformation. Replace any damaged parts immediately.

F070C01A-AAT

### o Coolant

The coolant should be changed at the intervals specified in the maintenance schedule.

F070E05A-AAT

### o Automatic Transaxle Fluid and Filter

The fluid level should be in the "HOT" range of the dipstick, after the engine and transaxle are at normal operating temperature. Check the automatic transaxle fluid level with the engine running and the transaxle in neutral, with the parking brake properly applied. Use HYUNDAI GENUINE ATF SP III, DIAMOND ATF SP III, SK ATF SP III or other brands approved by Hyundai Motor Co., when adding or changing fluid.

F070F01A-AAT

### o Brake Hoses and Lines

Visually check for proper installation, chafing, cracks, deterioration and any leakage. Replace any deteriorated or damaged parts immediately.

F070G02A-AAT

### o Brake Fluid

Check brake fluid level in the brake fluid reservoir. The level should be between "MIN" and "MAX" marks on the side of the reservoir. Use only hydraulic brake fluid conforming to DOT 3 or DOT 4.

F070H01A-AAT

### o Rear Brake Drums/Linings, Parking Brake

Check the rear brake drums and linings for scoring, burning, leaking fluid, broken parts, and excessive wear. Inspect the parking brake system including the parking brake lever and cables. For detailed service procedures, refer to the Shop Manual.

F070J01A-AAT

### o Brake Pads, Calipers and Rotors

Check the pads for excessive wear, discs for run out and wear, and calipers for fluid leakage.

F070K01A-AAT

### o Exhaust Pipe and Muffler

Visually inspect the exhaust pipes, muffler and hangers for cracks, deterioration, or damage. Start the engine and listen carefully for any exhaust gas leakage. Tighten connections or replace parts as necessary.

F070L01A-AAT

### o Suspension Mounting Bolts

Check the suspension connections for looseness or damage. Retighten to the specified torque.

F070M01Y-AAT

- o **Steering Gear Box, Linkage & Boots/  
Lower Arm Ball Joint, Upper Arm Ball  
Joint**

With the vehicle stopped and engine off, check for excessive free-play in the steering wheel. Check the linkage for bends or damage. Check the dust boots and ball joints for deterioration, cracks, or damage. Replace any damaged parts.

F070N02A-AAT

- o **Power Steering Pump and Hoses**

Check the power steering pump and hoses for leakage and damage. Replace any damaged or leaking parts immediately. Inspect the power steering belt for evidence of cuts, cracks, excessive wear, oiliness and proper tension. Replace or adjust it if necessary.

F070P01A-AAT

- o **Driveshafts and Boots**

Check the driveshafts, boots and clamps for cracks, deterioration, or damage. Replace any damaged parts and, if necessary, repack the grease.

F070Q01A-AAT

- o **Air Conditioning Refrigerant**

Check the air conditioning lines and connections for leakage and damage. Check air conditioning performance according to the relevant shop manual if necessary.

# 6

G010C01L-AAT

**ENGINE COMPARTMENT (3.5 V6)**

1. Brake fluid reservoir
2. Brake booster
3. Windshield washer fluid reservoir
4. Power steering fluid reservoir

5. Engine oil filler cap
6. Engine oil level dipstick
7. Radiator cap
8. Automatic transaxle fluid level dipstick

**CAUTION:**

When inspecting or servicing the engine, you should handle tools and other heavy objects carefully so that the plastic cover of the engine is not damaged.

G010C01L

9. Air cleaner filter
10. Coolant reservoir cap
11. Battery
12. Under hood junction box

## GENERAL CHECKS

G020A01L-AAT

### Engine Compartment

The following should be checked regularly:

- o Engine oil level and condition
- o Transaxle fluid level and condition
- o Brake fluid level
- o Coolant level
- o Windshield washer fluid level
- o Accessory drive belt condition
- o Engine coolant hose condition
- o Fluid leaks (on or below components)
- o Power steering fluid level
- o Battery condition
- o Air filter condition

G020B01A-AAT

### Vehicle Exterior

The following should be checked monthly:

- o Overall appearance and condition
- o Wheel condition and wheel nut torque
- o Exhaust system condition
- o Light condition and operation
- o Windshield glass condition
- o Wiper blade condition
- o Paint condition and body corrosion
- o Fluid leaks
- o Door and hood lock condition
- o Tire pressure and condition (including spare tire)

G020C01L-AAT

### Vehicle Interior

The following should be checked each time when the vehicle is driven:

- o Lights operation
- o Windshield wiper operation
- o Horn operation
- o Defroster, heating system operation (and air conditioning, if installed)
- o Steering operation and condition
- o Mirror condition and operation
- o Turn signal operation
- o Accelerator pedal operation
- o Brake operation, including parking brake
- o Automatic transaxle operation, including "Park" mechanism operation
- o Seat control condition and operation
- o Seat belt condition and operation
- o Sunvisor operation

If you notice anything that does not operate correctly or appears to be functioning incorrectly, inspect it carefully and seek assistance from your Hyundai dealer if service is needed.

## CHECKING THE ENGINE OIL

G030A01A-AAT

Engine oil is essential to the performance and service of the engine. It is suggested that you check the oil level at least once a week in normal use and more often if you are on a trip or driving in severe conditions.

G030B01A-AAT

## Recommended Oil

SH, SG or SG/CD (API) multi-grade and fuel efficient oil is recommended.

G030C02A-AAT

## To Check the Oil Level

Before checking the oil, warm up the engine to the normal operating temperature and be sure your car is parked on level ground. Turn the engine off.

Wait five minutes, then remove the dipstick, wipe it off, fully reinsert the dipstick and withdraw it again. Then note the highest level the oil has reached on the dipstick. It should be between the upper ("FULL") and lower ("LOW") range.

G030D01A-AAT

## Adding Oil

If the oil level is close to or below the "LOW" mark, add oil until it reaches the "FULL" mark.

To add oil:

1. Remove the oil filler cap by turning it counter-clockwise.
2. Add oil, then check the level again. Do not overfill.
3. Replace the cap by turning it clockwise.

The distance between the "FULL" and "LOW" marks is equal to about 1 quart of oil.

## CHANGING THE OIL AND FILTER

G040A01L-AAT

The engine oil and filter should be changed at those intervals specified in the maintenance schedule in Section 5. If the car is being driven in severe conditions, more frequent oil and filter changes are required.

The procedure for changing the oil and filter is as follows:

1. Park the car on level ground and set the parking brake. Start the engine and let it warm up until the needle on the coolant temperature gauge moves above the lowest mark. Turn the engine off and place the gear selector lever in "P".
2. Open the hood and remove the engine oil filler cap.

3. Slide underneath the car and loosen the drain plug by turning it counterclockwise with a wrench of the proper size. Be sure that a drain pan is in position to catch the oil as it drains out, then remove the drain plug.

**WARNING:**  
Be very careful when draining the engine oil as it may be hot enough to burn you!

4. When the oil has stopped draining, replace the drain plug using a new washer and retighten by turning it clockwise.

**Oil pan drain plug tightening torque:**  
3.5 ~ 4.0 kgf.m

5. Remove the oil filter by turning it counterclockwise with a oil filter wrench of the proper size. A certain amount of oil will come out when you remove the filter. So be sure to have your drain pan in place underneath it.
6. Install a new oil filter in accordance with the instructions on the carton or on the filter itself. Do not over-tighten.

**Oil filter tightening torque:** 1.2 ~ 1.6 kgf.m

Be sure that the mounting surface on the engine is clean and that the old gasket is removed completely. Lubricate the new gasket on the filter with clean engine oil before installation.

7. Remove the engine oil level dipstick.

8. Refill the crankcase with the recommended engine oil. Refer to the specification in chapter 9 for engine oil capacity.

**CAUTION**

Slowly pour the recommended oil using by a funnel. Do not overfill not to damage engine.

9. Start the engine and check to be sure no oil is leaking from the drain plug or oil filter.
10. Shut off the engine and recheck the oil level.

**NOTE:**

Always dispose of used engine oil in an environmentally acceptable manner. It is suggested that it be placed in a sealed container and taken to a service station for reclamation. Do not pour the oil on the ground or put it in with the household trash.

**PROPOSITION 65 WARNING:**

Used engine oil may cause irritation or cancer of the skin if left in contact with the skin for prolonged periods of time. Used engine oil contains chemicals that have caused cancer in laboratory animals. Always protect your skin by washing your hands thoroughly with soap and warm water as soon as possible after handling used oil.

## CHECKING AND CHANGING THE ENGINE COOLANT

G050A01A-AAT

### WARNING:

Do not remove the radiator cap when the engine is hot. When the engine is hot, the engine coolant is under pressure and may erupt through the opening if the cap is removed. You could be seriously burned if you do not observe this precaution. Do not remove the radiator cap until the radiator is cool to the touch.

G050B01A-AAT

### Recommended Engine Coolant

G050B01L

Use a high quality ethylene-glycol coolant in a 50/50 mix with water. The engine coolant should be compatible with aluminum engine parts. Additional corrosion inhibitors or additives should not be used. The cooling system must be maintained with the correct concentration and type of engine coolant to prevent freezing and corrosion. Never allow the concentration of antifreeze to exceed the 60% level or go below the 35% level, or damage to the cooling system may result. For proper concentration when adding or replacing the engine coolant, refer to the following table.

| Ambient temperature<br>°C ( °F) | Engine Coolant concentration |       |
|---------------------------------|------------------------------|-------|
|                                 | Antifreeze solution          | Water |
| -15 (5)                         | 35%                          | 65%   |
| -25 (-13)                       | 40%                          | 60%   |
| -35 (-31)                       | 50%                          | 50%   |
| -45 (-49)                       | 60%                          | 40%   |

G050C01A-AAT

**To Check the Coolant Level**

The coolant level can be seen on the side of the plastic coolant reservoir. The level of the coolant should be between the "L" and "F" lines on the reservoir when the engine is cool. If the level is below the "L" mark, add engine coolant to bring it up between "L" and "F". If the level is low, inspect for coolant leaks and recheck the fluid level frequently. If the level drops again, visit your Hyundai dealer for an inspection and diagnosis of the reason.

G050D02A-AAT

**To Change the Engine Coolant**

The engine coolant should be changed at those intervals specified in the vehicle maintenance schedule in Section 5.

**CAUTION:**

**Engine coolant can damage the finish of your car. If you spill engine coolant on the car, wash it off thoroughly with clean water.**

1. Park the car on level ground, set the parking brake and remove the radiator cap when cool.
2. Be sure your drain receptacle is in place. Open the drain cock on the radiator. Allow all the engine coolant to drain from the cooling system, then securely close the drain cock.
3. Check Section 9 for the capacity of the cooling system in your car. Then, following the manufacturer's directions on the engine coolant container, add the appropriate quantity of coolant to the radiator.

4. Turn the radiator cap counterclockwise without pressing down on it, until it stops. This relieves any pressure remaining in the cooling system. And remove the radiator cap by pushing down and turning counterclockwise.  
Now fill the radiator with clean demineralized or distilled water. Continue to add clean demineralized or distilled water in small quantities until the fluid level stays up in the radiator neck.

G050D02L

5. Start the engine, top off the radiator with water and then add coolant to the reservoir until the level is between "LOW" and "FULL".
6. Replace the radiator and reservoir caps and check to be sure the drain cocks are fully closed and not leaking.

**WARNING:**

The cooling fan is controlled by engine coolant temperature and may sometimes operate even when the engine is not running. Use extreme caution when working near the blades of the coolant fan so that you are not injured by a rotating fan blade. As the engine coolant temperature decreases, the fan will automatically shut off. This is a normal condition.

**SPARK PLUGS**

G060A02Y-AAT

(3.5V6)

G060A01L

Your engine was originally equipped with platinum-tipped spark plugs. Platinum-tipped spark plugs will last longer than conventional type spark plugs and can be identified by blue lines on the ceramic shell.

**NOTE:**

Do not clean or regap platinum-tipped spark plugs.

G060B04L-AAT

**Replacing the Spark Plugs**

The spark plugs should be changed at the intervals specified in the vehicle maintenance schedule in Section 5 or whenever engine performance indicates they should be changed. Symptoms that suggest poor spark plug performance include engine misfiring under load, loss of fuel economy, poor acceleration, etc. When spark plugs are replaced, always use spark plugs recommended by Hyundai. The use of other spark plugs can result in loss of performance, radio interference or engine damage.

**Recommended Spark Plugs:**

RC10PYP4 (CHAMPION)  
 RC10PYPB4 (CHAMPION)  
 PFR5N-II (NGK)

**NOTE:**

- o Spark plugs should be tightened firmly. Overtightening can damage the threads in the aluminum cylinder head. Also, leaving them too loose can cause the spark plug to get very hot and possibly result in damage to the engine.
- o It is recommended that spark plugs be changed by an authorized Hyundai dealer.

**WARNING:**

It is recommended that the engine be cool or cold when changing the spark plugs. If the engine is hot, you could burn yourself on the insulated connector, the spark plug or the engine itself.

## CHANGING THE AIR CLEANER FILTER

G070A02Y-AAT

The replacement of air cleaner filter is performed in the following manner.

1. Unsnap the clips around the cover.
2. When this is done, the cover can be lifted off, the old filter removed and the new filter put in its place.

Genuine Hyundai replacement parts are recommended.

**CAUTION:**

Operating your vehicle without a proper air cleaner filter in place can result in excessive engine wear. When removing the air cleaner filter, be careful that dust or dirt does not enter the air intake. These may result in damage to the air cleaner filter.

## WINDSHIELD WIPER BLADES

G080A02A-AAT

HEF119

The wiper blades should be carefully inspected from time to time and cleaned to remove accumulations of road film or other debris. To clean the wiper blades and arms, use a clean sponge or cloth with a mild soap or detergent and water. If the wipers continue to streak or smear the glass, replace them with genuine Hyundai replacement parts or their equivalent.

**CAUTION:**

- o Do not operate the wipers on dry glass. This can result in more rapid wear of the wiper blades and may scratch the glass.
- o Keep the blade rubber out of contact with petroleum products such as engine oil, gasoline, etc.

## FILLING THE WASHER RESERVOIR

G090A01A-AAT

HXG2007

The washer fluid reservoir supplies fluid to the windshield washer system.

A good quality washer fluid should be used to fill the washer reservoir. The fluid level should be checked more frequently during inclement weather or whenever the washer system is in more frequent use.

The capacity of the washer reservoir is 3.2 U.S. quarts (3.0 Liters).

**CAUTION:**

- o Radiator anti-freeze (engine coolant) should not be used in the washer system because it will damage the car's finish.
- o The washer should not be operated if the washer reservoir is empty. This can damage the washer fluid pump.

## CHECKING THE TRANSAXLE FLUID

G110A01E-AAT

Transaxle fluid in the automatic transaxle should be checked at those intervals specified in the vehicle maintenance schedule in Section 5.

### NOTE:

**Basically automatic transaxle fluid is red color. As driving distance increases, the fluid color turns darkish red gradually. It is normal condition and you should not use fluid color as a criterion for replacing the transaxle fluid.**

**You must replace the automatic transaxle fluid in accordance with intervals specified in the vehicle maintenances schedule in section 5.**

G110B05A-AAT

### Recommended Fluid

Your Hyundai automatic transaxle is specially designed to operate with HYUNDAI GENUINE ATF SP III, DIAMOND ATF SP III, SK ATF SP III or other brands approved by Hyundai Motor Co., Damage caused by a nonspecified fluid is not covered by your new vehicle limited warranty.

### CAUTION:

Use of aftermarket ATF additives may cause damage to the automatic transaxle. Only use HYUNDAI GENUINE ATF SP III, DIAMOND ATF SP III, SK ATF SP III or other brands approved by Hyundai Motor Co., If you are having your vehicle serviced at a facility other than a Hyundai dealer, verify ATF is used for your vehicle.

G110C01L-AAT

### Transaxle Fluid Capacity

The fluid capacity of the automatic transaxle is 9.1 U.S. quarts.

### WARNING:

The transaxle fluid level should be checked when the engine is at normal operating temperature. This means that the engine, radiator, exhaust system etc., are very hot so you should exercise great care not to burn yourself during this procedure.

G110D03L-AAT

### To Check the Transaxle Fluid Level

HXG065

Park the car on level ground with the parking brake engaged. When the transaxle fluid level is checked, the transaxle fluid should be at normal operating temperature and the engine idling.

While the engine is idling, apply the brakes and move the gear selector lever from "P" to each of its other positions -- "R", "N", "D" -- and then to "N" with the engine still idling:

1. Open the hood, being careful to keep hands, long hair and clothing clear of any moving parts.
2. Remove the transaxle dipstick, wipe it clean, reinsert the dipstick as far as it will go, then remove it again. Now check the fluid level on the dipstick. It should be in the "HOT" range on the dipstick.
3. Return the gear selector to the "P" position.

4. If the transaxle fluid level is low, use a funnel to add transaxle fluid through the dipstick tube until the level reaches the "HOT" range. Do not overfill.

**!** **WARNING:**  
 The cooling fan is controlled by engine coolant temperature and may sometimes operate even when the engine is not running. Use extreme caution when working near the blades of the cooling fan, so that you are not injured by a rotating fan blade. As the engine coolant temperature decreases, the fan will automatically shut off. This is a normal condition.

## CHECKING THE BRAKES

G120A01A-AAT

### CAUTION:

Because brakes are essential to the safe operation of the car, it is suggested that they be checked and inspected by your Hyundai dealer. The brakes should be checked and inspected for wear at those intervals specified in the vehicle maintenance schedule in Section 5.

G120B01A-AAT

**Checking the Brake Fluid Level****WARNING:**

Use caution when handling brake fluid. It can damage your vision if it gets into your eyes. It will also damage your vehicle's paint if spilled on it and not removed immediately.

G120C02A-AAT

**Recommended Brake Fluid**

Use only hydraulic brake fluid conforming to DOT 3 or DOT 4 specifications in your braking system. Follow the instructions printed on the container.

G120D01A-AAT

**To Check the Fluid Level**

The fluid level in the brake fluid reservoir should be checked periodically. The level should be between the "MIN" and "MAX" marks on the side of the reservoir. If the level is at or below the "MIN" mark, carefully add fluid to bring it up to "MAX". Do not overfill.

G120E02A-AAT

**Adding Brake Fluid****WARNING:**

Handle brake fluid carefully. It can damage your vision if it gets into your eyes. Use only DOT 3 or DOT 4 specification fluid from a sealed container. Do not allow the fluid can or reservoir to remain open any longer than required. This will prevent entry of dirt and moisture which can damage the brake system and cause improper operation.

To add brake fluid, first wipe away any dirt then unscrew the fluid reservoir cap. Slowly pour the recommended fluid into the reservoir. Do not overfill. Carefully replace the cap on the reservoir and tighten.

## AIR CONDITIONING CARE

G140A01A-AAT

**Keeping the Condenser Clean**

The air conditioning condenser (and engine radiator) should be checked periodically for accumulation of dirt, dead insects, leaves, etc. These can interfere with maximum cooling efficiency. When removing such accumulations, brush or hose them away carefully to avoid bending the cooling fans.

G140B01A-AAT

**Checking the Air Conditioning Operation**

1. Start the engine and let it run at a fast idle for several minutes with the air conditioning set at the maximum cold setting.
2. If the air coming out of the in-dash vents is not cold, have the air conditioning system inspected by your Hyundai dealer.

**CAUTION:**

Running the air conditioning system for extended periods of time with a low refrigerant level may damage the compressor.

G140C01A-AAT

**Lubrication**

To lubricate the compressor and the seals in the system, the air conditioning should be run for at least 10 minutes each week. This is particularly important during cool weather when the air conditioning system is not otherwise in use.

G140D02A-AAT

**Checking the Compressor Drive Belt**

When the air conditioning is being used regularly, the compressor drive belt tension should be checked at least once a month with the engine turned off.

To check the drive belt tension, press down on the belt halfway between the engine crankshaft and compressor pulleys. Pressing with your finger, you should not be able to deflect this belt anymore than 1/3 of an inch. If the belt is too loose, have it adjusted by your Hyundai dealer.

## CHANGING THE AIR CONDITIONER FILTER

G145A02L-GAT

### (For Evaporator and Blower Unit)

The air conditioner filter is located in front of the evaporator unit behind the glove box. It helps to decrease pollutants from entering the car.

1. Open the glove box and take out the damper strap from the hole.

2. Lower the glove box completely by pushing the both sides of the glove box inward.

3. Lower the glove box down completely.

4. Turn the knob of the air conditioner filter cover counterclockwise and remove the air conditioner filter cover.

5. Remove the two air conditioner filters by pulling the knob of the air conditioner filter outward.
6. Replace the two filters.
7. Installation is the reverse order of disassembly.

**CAUTION:**

Be sure to install it with the direction of the air conditioner filter checked.

**CHECKING THE FREEPLAY**

G150A01A-AAT

**CHECKING STEERING WHEEL FREE-PLAY**

To check the steering wheel free-play, stop the car with the wheels pointed straight ahead and gently move the steering wheel back and forth. Use very light finger pressure and be sensitive to changes in resistance that mark the limits of the free-play. If the free-play is greater than specified, have it inspected by your Hyundai dealer and adjusted or repaired if necessary.

G170A01A-AAT

**CHECKING BRAKE PEDAL FREE-PLAY**

With the engine off, press down on the brake pedal several times to reduce the vacuum in the brake booster.

Then, using your hand, press down slowly on the brake pedal until you feel a change in resistance. This is the brake pedal free-play. The free-play should be within the limits specified in the illustration above. If it is not, have it inspected by your Hyundai dealer and adjusted or repaired if necessary.

G180A01A-AAT

## CHECKING BRAKE PEDAL CLEARANCE

You need a helper to check the brake pedal clearance. With the engine running, have your helper press down on the brake pedal several times and then hold it down with a force of about 110 lbs (50 kg, 490 N). The brake pedal clearance is the distance from the top surface of the brake pedal to the asphalt sheeting under the floor mat.

If the brake pedal clearance is not within the limits specified in the illustration, have it inspected by your Hyundai dealer and adjusted or repaired if necessary.

## CHECKING DRIVE BELTS

G190A01A-AAT

Drive belts should be checked periodically for proper tension and adjusted if necessary. At the same time, belts should be examined for cracks, wear, fraying or other evidence of deterioration and replaced if necessary.

Belt routing should also be checked to be sure there is no interference between the belts and other parts of the engine. After a belt is replaced, the new belt should be adjusted again after two or three weeks to eliminate slack resulting from initial stretching after use.

## CHECKING AND REPLACING FUSES

G200A01Y-GAT

### Replacing a Fusible Link

A fusible link will melt if the electrical circuits from the battery are ever overloaded, thus preventing damage to the entire wiring harness. (This could be caused by a short in the system drawing too much current.) If this ever happens, have a Hyundai dealer determine the cause, repair the system and replace the fusible link. The fusible links are located in a under hood junction box for easy inspection.

**CAUTION:**

When replacing a fusible link, never use anything but a new fusible link with the same or lower amperage rating. Never use a piece of wire or a higher-rated fusible link. This could result in serious damage and create a fire hazard.

G200B01Y-GAT

**Replacing Accessory Fuse**

G200B01L

The instrument panel junction box for the lights and other electrical accessories will be found low on the dashboard on the driver's side. Inside instrument panel junction box you will find a list showing the circuits protected by each fuse. If any of your car's lights or other electrical accessories stop working, a blown fuse could be the reason. If the fuse has burned out, you will see that the metal strip inside the fuse has burned through. If you suspect a blown fuse, follow this procedure:

1. Turn off the ignition and all other switches.
2. Open the instrument panel junction box and examine each fuse. Remove each fuse by pulling it toward you (a small "fuse puller" tool is contained in the fuse box to simplify this operation).
3. Be sure to check all other fuses even if you find one that appears to have burned out.

Fuse Puller

HXGS416

4. Replace the blown fuse by pressing a new fuse of the same rating into place. The fuse should be a snug fit. If it is not, have the fuse clip repaired or replaced by a Hyundai dealer. If you do not have a spare fuse, you may be able to borrow a fuse of the same or lower rating from an accessory you can temporarily get along without (the radio or cigarette lighter, for example). Always remember to replace the borrowed fuse.

## CHECKING THE BATTERY

**CAUTION:**

A burned-out fuse indicates that there is a problem in the electrical circuit. If you replace a fuse and it blows as soon as the accessory is turned on, the problem is serious and should be referred to a Hyundai dealer for diagnosis and repair. Never replace a fuse with anything except a fuse with the same or a lower amperage rating. A higher capacity fuse could cause damage and create a fire hazard.

**NOTE:**

See page 6-32 for the junction box descriptions.

G210A01A-AAT

**WARNING:**

**Batteries can be dangerous! When working with batteries, carefully observe the following precautions to avoid serious injuries.**

The fluid in the battery contains a strong solution of sulfuric acid, which is poisonous and highly corrosive. Be careful not to spill it on yourself or the car. If you do spill battery fluid on yourself, immediately do the following:

- o If battery fluid is on your skin, flush the affected areas with water for at least 15 minutes and then seek medical assistance.
- o If battery fluid is in your eyes, rinse out your eyes with water and get medical assistance as soon as possible. While you are being driven to get medical assistance, continue to rinse your eyes by using a sponge or soft cloth saturated with water.
- o If you swallow battery fluid, drink a large quantity of water or milk followed by milk of magnesia, eat a raw egg or drink vegetable oil. Get medical assistance as soon as possible.

While batteries are being charged (either by a battery charger or by the vehicle's generator), they produce explosive gases. Always observe these warnings to prevent injuries from occurring:

- o Charge batteries only in a well ventilated area.
- o Do not permit flames, sparks or smoking in the area.
- o Keep children away from the area.

G210B03A-AAT

**Checking the Battery**

Keep the battery clean. Any evidence of corrosion around the battery posts or terminals should be removed using a solution of household baking soda and warm water. After the battery terminals are dry, cover them with a light coating of grease.

**PROPOSITION 65 WARNING:**

**Battery posts, terminals, and related accessories contain lead and lead compounds, chemicals known to the State of California to cause cancer and reproductive harm. Batteries also contain other chemicals known to the State of California to cause cancer. Wash hands after handling.**

## CHECKING ELECTRIC COOLING FANS

G220A01A-AAT

### WARNING:

The cooling fan is controlled by engine coolant temperature and may sometimes operate even when the engine is not running. Use extreme caution when working near the blades of the coolant fan, so that you are not injured by a rotating fan blade. As the engine coolant temperature decreases the fan will automatically shut off. This is a normal condition.

G220B01A-AAT

### Checking Engine Cooling Fan

The engine cooling fan should come on automatically if the engine coolant temperature is high.

G220C01A-AAT

### Checking Condenser Cooling Fan

The condenser coolant fan should come on automatically whenever the air conditioning is in operation.

## POWER STEERING FLUID LEVEL

G230A01L-AAT

HXG2006

The power steering fluid level should be checked regularly.

To check the power steering fluid level, be sure the ignition is "OFF", then check to make certain that the power steering fluid level is between the "MAX" and "MIN" level markings on the fluid reservoir.

### NOTE:

Grinding noise from the power steering pump may be heard immediately after the engine is started in extremely cold conditions (below -4°F). If the noise stops during warm up, there is no abnormal function in the system. It is due to a power steering fluid characteristic in extremely cold conditions.

### Recommended Fluid

Use PSF-3 fluid.

### NOTE:

Do not start the engine when the power steering oil reservoir is empty.

G240A01A-AAT

## POWER STEERING HOSES

It is suggested that you check the power steering hose connections for fluid leakage at regular intervals. The power steering hoses should be replaced if there is severe surface cracking, scuffing or worn spots. Deterioration of the hose could cause premature failure.

G250A01A-AAT

## FOR MORE INFORMATION ABOUT YOUR HYUNDAI

If you desire additional information about maintaining and servicing your Hyundai, you may purchase a factory Shop Manual at your Hyundai dealer's parts department. This is the same manual used by dealership technicians and while it is highly technical it can be useful in obtaining a better understanding of your car and how it works.

## HEADLIGHT AIMING ADJUSTMENT

G290A03L-AAT

## HID Type (If Installed)

**WARNING:**

If you need headlight aiming adjustment, have your vehicle inspected by your Hyundai Dealer.

Don't attempt to replace or inspect the HID headlight bulb to prevent danger of an electric shock.

## General Type

G290A02L-A

Before performing aiming adjustment, make sure of the following.

1. Keep all tires inflated to the correct pressure.
2. Place the vehicle on level ground and press the front bumper & rear bumper down several times. Place vehicle at a distance of 118 in. (3m) from the test wall.
3. See that the vehicle is unloaded (except for full levels of coolant, engine oil and fuel, and spare tire, jack, and tools). Have the driver or equivalent weight placed in driver's seat.
4. Clean the head light lenses and turn on the headlights (Low beam).
5. Open the hood.
6. Draw the vertical line (through the center of each headlight) and the horizontal line (through the center of each headlight) on the aiming screen. And then, draw a parallel line at 0.8in.(21mm.) under the horizontal line.
7. Adjust each cut-off line of the low beam to the parallel line with a phillips screwdriver - VERTICAL AIMING

**WARNING:**

Horizontal aiming should be adjusted by an authorized Hyundai Dealer.

G290B02L-AAT

## Adjustment After Headlight Assembly Replacement

If the vehicle has had front body repair and the headlight assembly has been replaced, the headlight aiming should be checked using an aiming screen as shown in the illustration. Turn on the headlight switch. (Low Beam Position)

1. Adjust headlights so that main axis of light is parallel to center line of the body and is aligned with point "P" shown in the illustration.
2. Dotted lines in the illustration show center of headlights.

**SPECIFICATIONS:**

"H";

Horizontal center line of headlights from ground:

General type : 24.96 in. (634 mm)

HID type : 24.72 in. (628 mm)

"W";

Distance between each headlight center:

48.8 in. (1,240 mm)

"L";

Distance between the headlights and the wall that the lights are tested against:

118 in. (3,000 mm)

G260A01L-GAT

**REPLACEMENT OF LIGHT BULBS**

Before attempting to replace a light bulb, be sure the switch is turned to the "OFF" position.

The next paragraph shows how to reach the light bulbs so they may be changed. Be sure to replace the burned-out bulb with one of the same number and wattage rating.

See page 6-31 for the wattage descriptions.

**CAUTION:**

- o Keep the lights out of contact with petroleum products, such as oil, gasoline, etc.
- o Be sure to replace the LED type equipped bulbs with an assembly.

G270A02L-AAT

**HEADLIGHT AND FRONT TURN SIGNAL LIGHT**

Replacement instructions:

1. Allow the bulb to cool. Wear eye protection.
2. Open the engine hood.
3. Always grasp the bulb by its plastic base, avoid touching the glass.

4. Using a socket wrench of the correct size, remove the headlight assembly mounting bolts.

5. Disconnect the power cord from the back of the headlight.

6. Turn the plastic cover counterclockwise and remove it.

7. Disconnect the power cord from the bulb base in the back of the headlight.

G270A07L

8. Push the bulb spring to remove the headlight bulb.
9. Remove the protective cap from the replacement bulb and install the new bulb by matching the plastic base with the headlight hole. Retighten the bulb spring and reconnect the power cord.
10. Use the protective cap and carton to promptly dispose of the old bulb.
11. Check for proper headlight aim.

G270A08L

12. To replace the front turn signal light bulb, take out it from the bulb holder and install the new bulb.

1FJB5036

**!** **WARNING:**  
 This halogen bulb contains gas under pressure and if impacted could shatter, resulting in flying fragments. Always wear eye protection when servicing the bulb. Protect the bulb against abrasions or scratches and against liquids when lighted. Turn the bulb on only when installing in a headlight. Replace the headlight if damaged or cracked. Keep the bulb out of the reach of children and dispose of the used bulb with care.

G270I01L-GAT

**FRONT FOG LIGHT**

1. Remove the headlight assembly mounting bolts.

2. Disconnect the power cord from the bulb base in the back of the headlight.

3. Take out front fog light from the bulb holder by turning it counterclockwise.

4. Disconnect the power cord from the bulb.
5. Replace with a new bulb.

G270D01L-GAT

### REAR COMBINATION LIGHT (Stop /Tail Light and Rear Turn Signal Light)

1. Open the trunk lid.

2. Remove the cover on the inside of rear luggage trim by unscrewing the screws.

3. To replace the rear combination light (stop/tail light and rear turn signal light), remove it from the bulb holder and install the new bulb.

G270J01L-GAT

**BACK UP LIGHT**

1. Remove the trunk lid trim.

2. To replace the back-up light, remove it from the bulb holder and install the new bulb.

G270C01L-GAT

**LUGGAGE COMPARTMENT LIGHT**

1. Open the trunk lid.

2. Remove the luggage compartment light cover on the rear package tray panel with a blade screwdriver.

3. Disconnect the connector.

4. Replace with a new bulb.

G270E01L-AAT  
**SIDE MARKER LIGHT**

1. Remove the side marker light cover with a blade screwdriver.

2. Disconnect the connector.

HTB278

3. Replace with a new bulb.

G270G01E-GAT  
**INTERIOR LIGHT**

G270G01L

1. Remove the plastic cover with a flat blade screwdriver.

G270G02L

2. Replace with a new bulb.

G270K01L-GAT

### GLOVE BOX ILLUMINATED LIGHT

1. Open the glove box.

2. Remove the glove box illuminated light cover with a blade screwdriver.

3. Disconnect the connector.

4. Replace with a new bulb.

## BULB WATTAGE

G280A02L-AAT

G280A01L-1

| No. | Part Name                                   | Wattage       | No. | Part Name                    | Wattage        |
|-----|---|---------------|-----|------------------------------|----------------|
| 1   | Head Light (High/Low)                       | 55(H1)/55(H7) | 8   | Rear Room Light              | 10             |

# EMISSION CONTROL SYSTEMS

|                               |     |
|-------------------------------|-----|
| Emission Control System ..... | 7-2 |
| EGR System.....               | 7-2 |
| Catalytic Converter .....     | 7-3 |

# 7

## EMISSION CONTROL SYSTEM

H010A02L-AAT

Your Hyundai is equipped with an emission control system to meet all requirements of the U.S. Environmental Protection Agency or California Air Resources Board.

There are three emission control systems which are as follows.

- (1) Crankcase emission control system
- (2) Evaporative emission control system
- (3) Exhaust emission control system

In order to assure the proper function of the emission control systems, it is recommended that you have your car inspected and maintained by an authorized Hyundai dealer in accordance with the maintenance schedule in this manual.

### Caution for the Inspection and Maintenance Test (3.5 V6 Vehicle with Traction Control System)

After dynamometer testing is completed, erase the ABS/TCS DTC(Diagnostic Trouble Code) with a GST (Generic Scan Tool) or Hi-Scan Pro.

H010B01A-AAT

## 1. Crankcase Emission Control System

The positive crankcase ventilation system is employed to prevent air pollution caused by blow-by gases being emitted from the crankcase. This system supplies filtered air to the crankcase through the air intake hose. Inside the crankcase, the fresh air mixes with blow-by gases, which then pass through the PCV valve and into the induction system.

H010C01S-AAT

## 2. Evaporative Emission Control (Including ORVR: Onboard Refueling Vapor Recovery) System

The Evaporative Emission Control System is designed to prevent fuel vapors from escaping into the atmosphere.

**(The ORVR system is designed to allow the vapors from the fuel tank to be loaded into a canister while refueling at the gas station, preventing the escape of fuel vapors into the atmosphere.)**

### Canister

Fuel vapors generated inside the fuel tank are absorbed and stored in the onboard canister. When the engine is running, the fuel vapors absorbed in the canister are drawn into the induction system through the purge control solenoid valve.

### Purge Control Solenoid Valve (PCSV)

The purge control solenoid valve is controlled by the Engine Control Module (ECM); when the engine coolant temperature is low during idling, the PCSV closes so that evaporated fuel is not taken into the engine. After the engine warms-up during ordinary driving, the PCSV opens to introduce evaporated fuel to the engine.

## CATALYTIC CONVERTER

H010D01A-AAT

### 3. Exhaust Emission Control System

The Exhaust Emission Control System is a highly effective system which controls exhaust emissions while maintaining good vehicle performance.

H010E01Y-AAT

### EGR System (If Installed)

This system helps reduce nitrogen oxides by recirculating a part of the exhaust gas into the engine, thereby reducing cylinder combustion temperature, which results in lower output of oxides of nitrogen.

H020A01A-AAT

All Hyundai vehicles are equipped with a monolith type three-way catalytic converter to reduce the carbon monoxide, hydrocarbons and nitrogen oxides contained in the exhaust gas. Exhaust gases passing through the catalytic converter cause it to operate at a very high temperature. The introduction of large amounts of unburned gasoline into the exhaust may cause the catalytic converter to overheat and create a fire hazard. This risk may be reduced by observing the following:

#### WARNING:

- Use unleaded fuel only.
- Maintain the engine in good operating condition. Extremely high catalytic converter temperatures can result from improper operation of the electrical, ignition or multiport electronic fuel injection.
- If your engine stalls, pings, knocks, or is hard to start, have your Hyundai dealer inspect and repair the problem as soon as possible.
- Avoid driving with a very low fuel level. Running out of gasoline may cause the engine to misfire and result in damage to the catalytic converter.
- Avoid idling the engine for periods longer than 10 minutes.
- The vehicle should not be pushed or pulled to get started. This may cause the catalytic converter to overheat and create a fire hazard.

**WARNING:**

- o Do not touch the catalytic converter or any other part of the exhaust system while the catalytic converter is hot. Shut off the engine, wait for at least one hour before touching the catalytic converter or any other part of the exhaust system.
- o Remember that your Hyundai dealer is your best source of assistance.
- o Do not stop your Hyundai over any combustible material such as grass, paper, leaves or rags. These materials might contact the hot catalytic converter and a fire might result.

# CONSUMER INFORMATION & REPORTING SAFETY DEFECTS

## VEHICLE IDENTIFICATION NUMBER (VIN)

I010A02L-AAT

The vehicle identification number (VIN) is the number used in registering your car and in all legal matters pertaining to its ownership, etc. It can be found in four different places on your car:

1. On the bulkhead between the engine and passenger compartments.

2. On the left top side of the instrument panel where it can be seen by looking down through the windshield.

## TIRE INFORMATION

3

I010A04L

3. On the left center pillar.

I010A05L

4. On the front lower side of the left center pillar outer panel.

I010B01A-AAT

### Engine Number

I010B01L

The engine number is stamped on the engine block as shown in the drawing.

I020A01A-AAT

The tires supplied on your new Hyundai are chosen to provide the best performance for normal driving.

If you ever have questions about your tire warranty and where to obtain service, see the tire manufacturer's booklet included with your vehicle's Owner's Manual Literature Kit.

## RECOMMENDED INFLATION PRESSURES

I030A03L-AAT

I030A01L

Tire label located on the driver's door edge gives the cold tire pressures recommended for your vehicle with the original tire size, the number of people that can be in your vehicle and vehicle capacity weight.

| TIRE AND LOADING INFORMATION  |                              |         |  |
|---|------------------------------|---------|--|
|  |                              |         |  |
| SEATING CAPACITY  |                              |         |  |
| TOTAL 5   |                              | FRONT 2 | REAR 3   |
| The combined weight of occupants and cargo should never exceed 860 pounds.        |                              |         |  |
| TIRE SIZE   | COLD TIRE INFLATION PRESSURE |         |  |
| P205/60R16<br>94H   | FOR UP TO<br>4 PERSONS       | FRONT   | 230KPA, 33PSI  |
|   |                              | REAR    | 210KPA, 30PSI  |
|   | MAX. VEHICLE<br>WEIGHT LIMIT | FRONT   | 240KPA, 35PSI  |
|   |                              | REAR    | 240KPA, 35PSI  |
|   |                              |         | SEE OWNER'S<br>MANUAL FOR<br>ADDITIONAL<br>INFORMATION |

I030A01XG

These pressures were chosen to provide the most satisfactory combination of ride comfort, tire wear and stability under normal conditions. Tire pressures should be checked at least monthly. Proper tire inflation pressures should be maintained for these reasons:

**! WARNING:**

- o Lower-than-recommended tire pressures cause uneven tread wear, poor handling, poor fuel economy or tire failure.
- o Higher-than-recommended tire pressures can cause poor handling, uneven tread wear or tire failure.

**! CAUTION:**

Always observe the following:

- o Check pressures when the tires are cold. That is, after the car has been parked for at least three hours and hasn't been driven more than one mile or 1.6 km since starting up.

- o **Check the pressure of your spare tire each time you check the pressure of other tires.**
- o **Never overload your car. Be especially careful about overloading if you equip your car with a luggage rack or car top carrier.**
- o **Worn, old tires can cause accidents. If your tread is badly worn, or if your tires have been damaged, replace them.**

I035A01JM-AAT

## **CHECKING TIRE INFLATION PRESSURE**

Check your tires once a month or more. Also, check the tire pressure of the spare tire.

### **How to Check**

Use a good quality gage to check tire pressure. You can not tell if your tires are properly inflated simply by looking at them. Radial tires may look properly inflated even when they're underinflated. Check the tire's inflation pressure when the tires are cold. - "Cold" means your vehicle has been sitting for at least three hours or driven no more than 1 mile (1.6 km).

Remove the valve cap from the tire valve stem. Press the tire gage firmly onto the valve to get a pressure measurement. If the cold tire inflation pressure matches the recommended pressure on the tire and loading information

label, no further adjustment is necessary. If the pressure is low, add air until you reach the recommended amount. If you overfill the tire, release air by pushing on the metal stem in the center of the tire valve. Recheck the tire pressure with the tire gage. Be sure to put the valve caps back on the valve stems. They help prevent leaks by keeping out dirt and moisture.

I030B01L-AAT

**TIRE SIDEWALL LABELING**

Federal law requires tire manufacturers to place standardized information on the sidewall of all tires. This information identifies and describes the fundamental characteristics of the tire and also provides the tire identification number (TIN) for safety standard certification. The TIN can be used to identify the tire in case of a recall.

**1. Manufacturer or Brand name**

- o Manufacturer or Brand name is shown.

**2. Tire size** (example: P205/60R 16 94H)

- o The "P" indicates the tire is designed for passenger vehicles. A "T" is the designation for a temporary spare tire. (If installed)
- o Three-digit number (205): This number gives the width in millimeters of the tire from sidewall edge to sidewall edge.
- o Two-digit number (60): This number, known as the aspect ratio, gives the tire's ratio of height to width.
- o R: The "R" stands for radial.
- o Two-digit number (16): This number is the wheel or rim diameter in inches.
- o Two (or three) digit number (94): This number is the tire's load index. It is a measurement of how much weight each tire can support.

- o H: Speed Rating. The speed rating denotes the speed at which a tire is designed to be driven for extended periods of time. The ratings range from "A" to "Z" (98 to 186 MPH).

**3. TIN** (Tire Identification Number) for new tire (example: DOT XX XX XXX XXXX)

- o DOT: Abbreviation for the "Department of Transportation". The symbol can be placed above, below or to the left or right of the Tire Identification Number. Indicates tire is in compliance with the U.S. Department of Transportation Motor Vehicle Safety Standards.
- o 1st two-digit code: Manufacturer's identification mark
- o 2nd two-digit code: Tire size
- o 3rd three-digit code: Tire type code (Optional)
- o 4th four-digit code: Date of Manufacture

o Four numbers represent the week and year the tire was built. For example, the numbers 3105 means the 31st week of 2005.

#### 4. **Tire ply composition and material**

The number of layers or plies of rubbercoated fabric in the tire. Tire manufacturers also must indicate the materials in the tire, which include steel, nylon, polyester, and others. The letter "R" means radial ply construction; the letter "D" means diagonal or bias ply construction; and the letter "B" means belted-bias ply construction.

#### 5. **Maximum permissible inflation pressure**

This number is the greatest amount of air pressure that should be put in the tire. Do not exceed the maximum permissible inflation pressure. Refer to the Tire and Loading Information label for recommended inflation pressure.

#### 6. **Maximum load rating**

This number indicates the maximum load in kilograms and pounds that can be carried by the tire. When replacing the tires on the vehicle, always use a tire that has the same load rating as the factory installed tire.

#### 7. **Uniform Tire Quality Grading (UTQG):**

Tire manufacturers are required to grade tires based on three performance factors: treadwear, traction and temperature resistance. For more information, see Uniform Tire Quality Grading on page 8-14.

I030D01JM-AAT

### **TIRE TERMINOLOGY AND DEFINITIONS**

**Air Pressure:** The amount of air inside the tire pressing outward on the tire. Air pressure is expressed in pounds per square inch (psi) or kilopascal (kPa).

**Accessory Weight:** This means the combined weight of optional accessories. Some examples of optional accessories are, automatic transmission, power seats, and air conditioning.

**Aspect Ratio:** The relationship of a tire's height to its width.

**Belt:** A rubber coated layer of cords that is located between the plies and the tread. Cords may be made from steel or other reinforcing materials.

**Bead:** The tire bead contains steel wires wrapped by steel cords that hold the tire onto the rim.

**Bias Ply Tire:** A pneumatic tire in which the plies are laid at alternate angles less than 90 degrees to the centerline of the tread.

**Cold Tire Pressure:** The amount of air pressure in a tire, measured in pounds per square inch (psi) or kilopascals (kPa) before a tire has built up heat from driving.

**Curb Weight:** This means the weight of a motor vehicle with standard and optional equipment including the maximum capacity of fuel, oil and coolant, but without passengers and cargo.

**DOT Markings:** A code molded into the sidewall of a tire signifying that the tire is in compliance with the U.S. Department of Transportation motor vehicle safety standards. The DOT code includes the Tire Identification Number (TIN), an alphanumeric designator which can also identify the tire manufacturer, production plant, brand and date of production.

**GVWR:** Gross Vehicle Weight Rating

**GAWR FRT:** Gross Axle Weight Rating for the front Axle.

**GAWR RR:** Gross Axle Weight Rating for the rear axle.

**Intended Outboard Sidewall:** The side of an asymmetrical tire, that must always face outward when mounted on a vehicle.

**Kilopascal (kPa):** The metric unit for air pressure.

**Load Index:** An assigned number ranging from 1 to 279 that corresponds to the load carrying capacity of a tire.

**Maximum Inflation Pressure:** The maximum air pressure to which a cold tire may be inflated. The maximum air pressure is molded onto the sidewall.

**Maximum Load Rating:** The load rating for a tire at the maximum permissible inflation pressure for that tire.

**Maximum Loaded Vehicle Weight:** The sum of curb weight; accessory weight; vehicle capacity weight; and production options weight.

**Normal Occupant Weight:** The number of occupants a vehicle is designed to seat multiplied by 150 pounds (68 kg).

**Occupant Distribution:** Designated seating positions.

**Outward Facing Sidewall:** The side of a asymmetrical tire that has a particular side that faces outward when mounted on a vehicle. The side of the tire that contains a whitewall, bears white lettering or bears manufacturer, brand and or model name molding that is higher or deeper than the same moldings on the other sidewall of the tire.

**Passenger (P-Metric) Tire:** A tire used on passenger cars and some light duty trucks and multipurpose vehicles.

**Recommended Inflation Pressure:** Vehicle manufacturer's recommended tire inflation pressure and shown on the tire placard.

**Radial Ply tire:** A pneumatic tire in which the ply cords that extend to the beads are laid at 90 degrees to the centerline of the tread.

**Rim:** A metal support for a tire and upon which the tire beads are seated.

**Sidewall:** The portion of a tire between the tread and the bead.

**Speed Rating:** An alphanumeric code assigned to a tire indicating the maximum speed at which a tire can operate.

**Traction:** The friction between the tire and the road surface. The amount of grip provided.

**Tread:** The portion of a tire that comes into contact with the road.

**Treadwear Indicators:** Narrow bands, sometimes called "wear bars," that show across the tread of a tire when only 2/32 inch of tread remains.

**UTQGS:** Uniform Tire Quality Grading Standards, a tire information system that provides consumers with ratings for a tire's traction, temperature and treadwear. Ratings are determined by tire manufacturers using government testing procedures. The ratings are molded into the sidewall of the tire.

**Vehicle Capacity Weight:** The number of designated seating positions multiplied by 150 lbs. (68 kg) plus the rated cargo and luggage load

**Vehicle Maximum Load on the Tire:** Load on an individual tire due to curb and accessory weight plus maximum occupant and cargo weight.

**Vehicle Normal Load on the Tire:** That load on an individual tire that is determined by distributing to each axle its share of the curb weight, accessory weight, and normal occupant weight and driving by 2.

**Vehicle Placard:** A label permanently attached to a vehicle showing the original equipment tire size and recommended inflation pressure

I040B01JM-AAT

## ALL SEASON TIRES

Hyundai specifies all season tires on some models to provide good performance for use all year round, including snowy and icy road conditions. All season tires are identified by ALL SEASON and/or M+S (Mud and Snow) on the tire sidewall. Snow tires have better snow traction than all season tires and may be more appropriate in some areas.

I040C01JM-AAT

## SUMMER TIRES

Hyundai specifies summer tires on some models to provide superior performance on dry roads. Summer tire performance is substantially reduced in snow and ice. Summer tires do not have the tire traction rating M+S (Mud and Snow) on the tire side wall. If you plan to operate your vehicle in snowy or icy conditions. Hyundai recommends the use of snow tires or all season tires on all four wheels.

I040A01S-AAT

**SNOW TIRES**

If you equip your car with snow tires, they should be the same size and have the same load capacity as the original tires. Snow tires should be installed on all four wheels; otherwise, poor handling may result.

Snow tires should carry 4 psi (28 kPa) more air pressure than the pressure recommended for the standard tires on the tire label on the driver's door edge, or up to the maximum pressure shown on the tire sidewall whichever is less. Do not drive faster than 75 mph (120 km/h) when your car is equipped with snow tires.

I050A02Y-AAT

**TIRE CHAINS**

Tire chains, if necessary, should be installed on the front wheels. Be sure that the chains are installed in accordance with the manufacturer's instructions.

To minimize tire and chain wear, do not continue to use tire chains when they are no longer needed.

**WARNING:**

**When driving on roads covered with snow or ice, drive at less than 20 mph (30 km/h).**

I060A02A-AAT

**TIRE ROTATION**

Tires should be rotated every 7,500 miles (12,000 km). If you notice that tires are wearing unevenly between rotations, have the car checked by a Hyundai dealer so the cause may be corrected.

After rotating, adjust the tire pressures and be sure to check the wheel nut torque.

**WARNING:**

- o Do not use the temporary spare tire for tire rotation.
- o Do not mix bias ply and radial ply tires under any circumstances. This may cause unusual handling characteristics that could result in death, serious injury, or property damage.

I070A01A-AAT

**TIRE BALANCING**

A tire that is out of balance may affect handling and tire wear. The tires on your Hyundai were balanced before the car was delivered but may need balancing again during the years you own the car. Whenever a tire is dismantled for repair, it should be rebalanced before being reinstalled on the car.

I080A01A-AAT

**TIRE TRACTION**

Tire traction can be reduced if you drive on worn tires, tires that are improperly inflated or on slippery road surfaces. Tires should be replaced when tread wear indicators appear. To reduce the possibility of losing control, slow down whenever there is rain, snow or ice on the road.

I090A01A-AAT

**WHEN TO REPLACE TIRES**

The original tires on your car have tread wear indicators. The tread wear indicators appear when the tread depth is 0.06 in. (1.6 mm). The tire should be replaced when these appear as a solid bar across two or more grooves of the tread. Always replace your tires with those of the recommended size. If you change wheels, the new wheel's rim width and offset must meet Hyundai specification.

## SPARE TIRE AND TOOLS

**WARNING:**

- o Driving on worn-out tires is dangerous! Worn-out tires can cause loss of braking effectiveness, steering control and traction. When replacing tires, never mix radial and bias ply tires on the same car. If you replace radial tires with bias-ply tires, they must be installed in sets of four.
- o Using tires and wheels of other than the recommended sizes could cause unusual handling characteristics that could cause death, serious injury, or property damage.
- o Wheels that do not meet Hyundai's dimensional specifications may fit poorly and result in damage to the vehicle, including broken wheel studs.

I100A02E-AAT

I100A03L

Your Hyundai is delivered with the following:

Spare tire and wheel  
 Wheel nut wrench, Wrench bar  
 Jack

I110A01A-AAT

**SHOP MANUAL**

A Hyundai Shop Manual is available from your authorized Hyundai dealer. It's written for professional technicians, but is simple enough for most mechanically-inclined owners to understand.

I120A03A-AAT

**WARRANTIES FOR YOUR HYUNDAI VEHICLE**

- o New vehicle 60 Months/60,000 Miles Limited Warranty.
- o New vehicle 120 Months/100,000 Miles Limited Powertrain Warranty (original owner only).
- o Anti-Perforation Limited Warranty
- o Emission Defect Warranty - Federal Vehicle
- o California Emission Control System Warranty (if applicable)
- o Emission Performance Warranty Federal vehicle
- o Replacement Parts and Accessories Limited Warranty

**NOTE:**

Detailed warranty information is provided in your Hyundai Owner's Handbook.

I130A01A-AAT

**CONSUMER INFORMATION**

This consumer information has been prepared in accordance with regulations issued by the National Highway Traffic Safety Administration of the U.S. Department of Transportation. It provides the purchasers and/or prospective purchasers of Hyundai automobiles with information on uniform tire quality grading. Your Hyundai dealer will help answer any questions you may have as you read this information.

I130B03A-AAT

**Tire Grading**

Department of Transportation quality grades - All passenger vehicle tires must conform to Federal Safety Standards in addition to these grades. These quality grades are molded on the sidewall.

**Treadwear** - The treadwear grade is a comparative rating based on the wear rate of the tire when tested under controlled conditions on a specified government test course. For example, a tire graded 150 would wear one and a half (1 - 1/2) times as well on the government course as a tire graded 100. The relative performance of tires depends upon the actual conditions of their use, however, and may depart significantly from the norm due to variations in driving habits, service practices and differences in road characteristics and climate.

**Traction AA, A, B, C** - The traction grades, from highest to lowest, are AA, A, B, and C. Those grades represent the tire's ability to stop on wet pavement as measured under controlled conditions on specified government test surfaces of asphalt and concrete. A tire marked C may have poor traction performance.

**WARNING:**

**The traction grade assigned to this tire is based on straight-ahead braking traction tests, and does not include acceleration, cornering, hydroplaning, or peak traction characteristics.**

**Temperature A, B, C** - The temperature grades are A (the highest), B, and C, representing the tire's resistance to the generation of heat and its ability to dissipate heat when tested under controlled conditions on a specified indoor laboratory test wheel. Sustained high temperature can cause the material of the tire to degenerate and reduce tire life, and excessive temperature can lead to sudden tire failure. The grade C corresponds to a level of performance which all passenger car tires must meet under the Federal Motor Vehicle Safety Standard No. 109. Grades B and A represent higher levels of performance on the laboratory test wheel than the minimum required by law.

**Uniform Tire Quality Grading** - Quality grades can be found on the tire sidewall between the tread shoulder and the maximum section width.

For example:  
Treadwear 200 Traction AA Temperature A

I130D02A-AAT

Hyundai motor vehicles are designed and manufactured to meet or exceed all applicable safety standards.

For your safety, however, we strongly urge you to read and follow all directions in this Owner's Manual, particularly the information under the headings "NOTE", "CAUTION" and "WARNING".

If, after reading this manual, you have any questions regarding the operation of your vehicle, please contact your nearest Hyundai Motor America Regional Office as listed below:

Eastern Region: Connecticut, Delaware, Maine, Maryland, Massachusetts, New Hampshire, New Jersey, New York, Pennsylvania, Rhode Island, Vermont, Virginia, West Virginia.

Eastern Region  
1100 Cranbury South River Road  
Jamesburg, NJ 08831  
(800) 633-5151

Southern Region: Alabama, Arkansas, Florida, Georgia, Louisiana, Mississippi, North Carolina, South Carolina, Oklahoma, Tennessee, Texas.

270 Riverside parkway,  
Suite A, Austell, GA 30168  
(800) 633-5151

Central Region: Illinois, Indiana, Missouri, Iowa, Kansas, Kentucky, Michigan, Minnesota, Nebraska, North Dakota, South Dakota, Ohio, Wisconsin.

Central Region

P.O.Box 20850  
Fountain Valley, California 92728-0850  
(800) 633-5151

**REPORTING SAFETY DEFECTS**

I130C02A-AAT

If you believe that your vehicle has a defect which could cause a crash or could cause injury or death, you should immediately inform the National Highway Traffic Safety Administration (NHTSA) in addition to notifying HYUNDAI MOTOR AMERICA. If NHTSA receives similar complaints, it may open an investigation, and if it finds that a safety defect exists in a group of vehicles, it may order a recall and remedy campaign. However, NHTSA cannot become involved in individual problems between you, your dealer, or HYUNDAI MOTOR AMERICA.

To contact NHTSA, you may either call the Auto Safety Hotline toll-free at 1-888-327-4236 or write to: NHTSA, U.S. Department of Transportation, Washington, D.C. 20590. You can also obtain other information about motor vehicle safety from the Hotline.
